## config system 3g-modem custom

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate VM64.

### 3G MODEM custom.

```
config system 3g-modem custom
  Description: 3G MODEM custom.
  edit <id>
    set class-id {user}
    set init-string {string}
    set model {string}
    set modeswitch-string {string}
    set product-id {user}
    set vendor {string}
    set vendor-id {user}
  next
end
```

## config system 3g-modem custom

Parameter	Description	Type	Size	Default
class-id	USB interface class in hexadecimal format (00-ff).	user	Not Specified	

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
init-string	Init string in hexadecimal format (even length).	string	Maximum length: 127	
model	MODEM model name.	string	Maximum length: 35	
modeswitch-string	USB modeswitch arguments. For example: '-v 1410 -p 9030 -V 1410 -P 9032 -u 3'.	string	Maximum length: 127	
product-id	USB product ID in hexadecimal format (0000-ffff).	user	Not Specified	
vendor	MODEM vendor name.	string	Maximum length: 35	
vendor-id	USB vendor ID in hexadecimal format (0000-ffff).	user	Not Specified

## config system admin

Parameter	Description	Type	Size	Default
accprofile	Access profile for this administrator. Access profiles control administrator access to FortiGate features.	string	Maximum length: 35	
accprofile-override	Enable to use the name of an access profile provided by the remote authentication server to control the FortiGate features that this administrator can access.	option	-	disable
	<b>Option</b>		<b>Description</b>	
	<i>enable</i>		Enable access profile override.	
	<i>disable</i>		Disable access profile override.	
allow-remove-admin-session	Enable/disable allow admin session to be removed by privileged admin users.	option	-	enable
	<b>Option</b>		<b>Description</b>	
	<i>enable</i>		Enable allow-remove option.	
	<i>disable</i>		Disable allow-remove option.	
comments	Comment.	var-string	Maximum length: 255	
email-to	This administrator's email address.	string	Maximum length: 63	
force-password-change	Enable/disable force password change on next login.	option	-	disable
	<b>Option</b>		<b>Description</b>	
	<i>enable</i>		Enable force password change on next login.	
	<i>disable</i>		Disable force password change on next login.	
fortitoken	This administrator's FortiToken serial number.	string	Maximum length: 16	
guest-auth	Enable/disable guest authentication.	option	-	disable
	<b>Option</b>		<b>Description</b>	
	<i>disable</i>		Disable guest authentication.	

Parameter	Description	Type	Size	Default				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable guest authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable guest authentication.			
Option	Description							
<i>enable</i>	Enable guest authentication.							
guest-lang	Guest management portal language.	string	Maximum length: 35					
guest-usergroups <name>	Select guest user groups. Select guest user groups.	string	Maximum length: 79					
ip6-trusthost1	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost10	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost2	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost3	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost4	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost5	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost6	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost7	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost8	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				
ip6-trusthost9	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0				

Parameter	Description	Type	Size	Default						
name	User name.	string	Maximum length: 64							
password	Admin user password.	password-2	Not Specified							
password-expire	Password expire time.	user	Not Specified							
peer-auth	Set to enable peer certificate authentication (for HTTPS admin access).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable peer.</td></tr><tr><td><i>disable</i></td><td>Disable peer.</td></tr></table>				Option	Description	<i>enable</i>	Enable peer.	<i>disable</i>	Disable peer.
	Option	Description								
	<i>enable</i>	Enable peer.								
<i>disable</i>	Disable peer.									
peer-group	Name of peer group defined under config user group which has PKI members. Used for peer certificate authentication (for HTTPS admin access).	string	Maximum length: 35							
remote-auth	Enable/disable authentication using a remote RADIUS, LDAP, or TACACS+ server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable remote authentication.</td></tr><tr><td><i>disable</i></td><td>Disable remote authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable remote authentication.	<i>disable</i>	Disable remote authentication.
	Option	Description								
	<i>enable</i>	Enable remote authentication.								
<i>disable</i>	Disable remote authentication.									
remote-group	User group name used for remote auth.	string	Maximum length: 35							
schedule	Firewall schedule used to restrict when the administrator can log in. No schedule means no restrictions.	string	Maximum length: 35							
sms-custom-server	Custom SMS server to send SMS messages to.	string	Maximum length: 35							
sms-phone	Phone number on which the administrator receives SMS messages.	string	Maximum length: 15							
sms-server	Send SMS messages using the FortiGuard SMS server or a custom server.	option	-	fortiguard						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortiguard</i></td><td>Send SMS by FortiGuard.</td></tr><tr><td><i>custom</i></td><td>Send SMS by custom server.</td></tr></table>				Option	Description	<i>fortiguard</i>	Send SMS by FortiGuard.	<i>custom</i>	Send SMS by custom server.
	Option	Description								
	<i>fortiguard</i>	Send SMS by FortiGuard.								
<i>custom</i>	Send SMS by custom server.									

Parameter	Description	Type	Size	Default
ssh-certificate	Select the certificate to be used by the FortiGate for authentication with an SSH client.	string	Maximum length: 35	
ssh-public-key1	Public key of an SSH client. The client is authenticated without being asked for credentials. Create the public-private key pair in the SSH client application.	user	Not Specified	
ssh-public-key2	Public key of an SSH client. The client is authenticated without being asked for credentials. Create the public-private key pair in the SSH client application.	user	Not Specified	
ssh-public-key3	Public key of an SSH client. The client is authenticated without being asked for credentials. Create the public-private key pair in the SSH client application.	user	Not Specified	
trusthost1	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
trusthost10	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
trusthost2	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
trusthost3	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
trusthost4	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
trusthost5	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

Parameter	Description	Type	Size	Default												
trusthost6	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost7	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost8	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost9	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
two-factor	Enable/disable two-factor authentication.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable two-factor authentication.</td></tr><tr><td>fortitoken</td><td>Use FortiToken or FortiToken mobile two-factor authentication.</td></tr><tr><td>fortitoken-cloud</td><td>FortiToken Cloud Service.</td></tr><tr><td>email</td><td>Send a two-factor authentication code to the configured email-to email address.</td></tr><tr><td>sms</td><td>Send a two-factor authentication code to the configured sms-server and sms-phone.</td></tr></table>				Option	Description	disable	Disable two-factor authentication.	fortitoken	Use FortiToken or FortiToken mobile two-factor authentication.	fortitoken-cloud	FortiToken Cloud Service.	email	Send a two-factor authentication code to the configured email-to email address.	sms	Send a two-factor authentication code to the configured sms-server and sms-phone.
Option	Description															
disable	Disable two-factor authentication.															
fortitoken	Use FortiToken or FortiToken mobile two-factor authentication.															
fortitoken-cloud	FortiToken Cloud Service.															
email	Send a two-factor authentication code to the configured email-to email address.															
sms	Send a two-factor authentication code to the configured sms-server and sms-phone.															
two-factor-authentication	Authentication method by FortiToken Cloud.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>fortitoken</td><td>FortiToken authentication.</td></tr><tr><td>email</td><td>Email one time password.</td></tr><tr><td>sms</td><td>SMS one time password.</td></tr></table>				Option	Description	fortitoken	FortiToken authentication.	email	Email one time password.	sms	SMS one time password.				
Option	Description															
fortitoken	FortiToken authentication.															
email	Email one time password.															
sms	SMS one time password.															
two-factor-notification	Notification method for user activation by FortiToken Cloud.	option	-													

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>email</i></td><td>Email notification for activation code.</td></tr><tr><td><i>sms</i></td><td>SMS notification for activation code.</td></tr></table>	Option	Description	<i>email</i>	Email notification for activation code.	<i>sms</i>	SMS notification for activation code.			
Option	Description									
<i>email</i>	Email notification for activation code.									
<i>sms</i>	SMS notification for activation code.									
vdom <name>	Virtual domain(s) that the administrator can access. Virtual domain name.	string	Maximum length: 79							
vdom-override	Enable to use the names of VDOMs provided by the remote authentication server to control the VDOMs that this administrator can access.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VDOM override.</td></tr><tr><td><i>disable</i></td><td>Disable VDOM override.</td></tr></table>	Option	Description	<i>enable</i>	Enable VDOM override.	<i>disable</i>	Disable VDOM override.			
Option	Description									
<i>enable</i>	Enable VDOM override.									
<i>disable</i>	Disable VDOM override.									
wildcard	Enable/disable wildcard RADIUS authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable username wildcard.</td></tr><tr><td><i>disable</i></td><td>Disable username wildcard.</td></tr></table>	Option	Description	<i>enable</i>	Enable username wildcard.	<i>disable</i>	Disable username wildcard.			
Option	Description									
<i>enable</i>	Enable username wildcard.									
<i>disable</i>	Disable username wildcard.									

## config system affinity-interrupt

This command is available for model(s): FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate VM64.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure interrupt affinity.

```
config system affinity-interrupt
    Description: Configure interrupt affinity.
    edit <id>
        set affinity-cpumask {string}
        set default-affinity-cpumask {string}
        set interrupt {string}
    next
end
```

## config system affinity-interrupt

Parameter	Description	Type	Size	Default
affinity-cpumask	Affinity setting (64-bit hexadecimal value in the format of 0xxxxxxxxxxxxxxxxx).	string	Maximum length: 127	
default-affinity-cpumask	Default affinity setting (64-bit hexadecimal value in the format of 0xxxxxxxxxxxxxxxxx).	string	Maximum length: 127	

Parameter	Description	Type	Size	Default
id	ID of the interrupt affinity setting.	integer	Minimum value: 0 Maximum value: 4294967295	0
interrupt	Interrupt name.	string	Maximum length: 127	

## config system affinity-packet-redistribution

This command is available for model(s): FortiGate VM64.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure packet redistribution.

```
config system affinity-packet-redistribution
  Description: Configure packet redistribution.
  edit <id>
    set interface {string}
    set rxqid {integer}
    set affinity-cpumask {string}
  next
end
```

## config system affinity-packet-redistribution

Parameter	Description	Type	Size	Default
id	ID of the packet redistribution setting.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Physical interface name on which to perform packet redistribution.	string	Maximum length: 127	
rxqid	ID of the receive queue (when the interface has multiple queues) on which to perform packet redistribution.	integer	Minimum value: 0 Maximum value: 255	0
affinity-cpumask	Affinity setting for VM throughput (64-bit hexadecimal value in the format of 0xxxxxxxxxxxxxxxxx).	string	Maximum length: 127	

## config system alarm

Configure alarm.

```
config system alarm
  Description: Configure alarm.
  set audible [enable|disable]
  config groups
    Description: Alarm groups.
    edit <id>
      set period {integer}

## config system alarm

Parameter	Description	Type	Size	Default
audible	Enable/disable audible alarm.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable audible alarm.		
	<i>disable</i>	Disable audible alarm.		
status	Enable/disable alarm.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable alarm.		
	<i>disable</i>	Disable alarm.		

## config groups

Parameter	Description	Type	Size	Default
id	Group ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
period	Time period in seconds (0 = from start up).	integer	Minimum value: 0 Maximum value: 4294967295	0
admin-auth-failure-threshold	Admin authentication failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
admin-auth-lockout-threshold	Admin authentication lockout threshold.	integer	Minimum value: 0 Maximum value: 1024	0

Parameter	Description	Type	Size	Default
user-auth-failure-threshold	User authentication failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
user-auth-lockout-threshold	User authentication lockout threshold.	integer	Minimum value: 0 Maximum value: 1024	0
replay-attempt-threshold	Replay attempt threshold.	integer	Minimum value: 0 Maximum value: 1024	0
self-test-failure-threshold	Self-test failure threshold.	integer	Minimum value: 0 Maximum value: 1	0
log-full-warning-threshold	Log full warning threshold.	integer	Minimum value: 0 Maximum value: 1024	0
encryption-failure-threshold	Encryption failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
decryption-failure-threshold	Decryption failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
fw-policy-id	Firewall policy ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
fw-policy-id-threshold	Firewall policy ID threshold.	integer	Minimum value: 0 Maximum value: 1024	0

## config fw-policy-violations

Parameter	Description	Type	Size	Default
id	Firewall policy violations ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold	Firewall policy violation threshold.	integer	Minimum value: 0 Maximum value: 1024	0
src-ip	Source IP (0=all).	ipv4-address	Not Specified	0.0.0.0
dst-ip	Destination IP (0=all).	ipv4-address	Not Specified	0.0.0.0
src-port	Source port (0=all).	integer	Minimum value: 0 Maximum value: 65535	0
dst-port	Destination port (0=all).	integer	Minimum value: 0 Maximum value: 65535	0

## config system alias

Configure alias command.

```
config system alias
    Description: Configure alias command.
    edit <name>
        set command {var-string}
    next
end
```

## config system alias

Parameter	Description	Type	Size	Default
command	Command list to execute.	var-string	Maximum length: 255	
name	Alias command name.	string	Maximum length: 35	

## config system api-user

Configure API users.

```
config system api-user
  Description: Configure API users.
  edit <name>
    set accprofile {string}
    set api-key {password-2}
    set comments {var-string}
    set cors-allow-origin {string}
    set peer-auth [enable|disable]
    set peer-group {string}
    set schedule {string}
    config trusthost
      Description: Trusthost.
      edit <id>
        set type [ipv4-trusthost|ipv6-trusthost]
        set ipv4-trusthost {ipv4-classnet}
        set ipv6-trusthost {ipv6-prefix}
      next
    end
  set vdom <name1>, <name2>, ...
next
end
```

## config system api-user

Parameter	Description	Type	Size	Default
accprofile	Admin user access profile.	string	Maximum length: 35	
api-key	Admin user password.	password-2	Not Specified	
comments	Comment.	var-string	Maximum length: 255	
cors-allow-origin	Value for Access-Control-Allow-Origin on API responses. Avoid using '*' if possible.	string	Maximum length: 269	
name	User name.	string	Maximum length: 35	
peer-auth	Enable/disable peer authentication.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable peer.		
	<i>disable</i>	Disable peer.		

Parameter	Description	Type	Size	Default
peer-group	Peer group name.	string	Maximum length: 35	
schedule	Schedule name.	string	Maximum length: 35	
vdom <name>	Virtual domains. Virtual domain name.	string	Maximum length: 79	

## config trusthost

Parameter	Description	Type	Size	Default						
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
type	Trusthost type.	option	-	ipv4-trusthost						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4-trusthost</td><td>IPv4 trusthost.</td></tr><tr><td>ipv6-trusthost</td><td>IPv6 trusthost.</td></tr></table>				Option	Description	ipv4-trusthost	IPv4 trusthost.	ipv6-trusthost	IPv6 trusthost.
	Option	Description								
	ipv4-trusthost	IPv4 trusthost.								
ipv6-trusthost	IPv6 trusthost.									
ipv4-trusthost	IPv4 trusted host address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0						
ipv6-trusthost	IPv6 trusted host address.	ipv6-prefix	Not Specified	::/0						

## config system arp-table

Configure ARP table.

```

config system arp-table
    Description: Configure ARP table.
    edit <id>
        set interface {string}
        set ip {ipv4-address}
        set mac {mac-address}
    next
end

```

## config system arp-table

Parameter	Description	Type	Size	Default
id	Unique integer ID of the entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface name.	string	Maximum length: 15	
ip	IP address.	ipv4-address	Not Specified	0.0.0.0
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00

## config system auto-install

Configure USB auto installation.

```
config system auto-install
  Description: Configure USB auto installation.
  set auto-install-config [enable|disable]
  set auto-install-image [enable|disable]
  set default-config-file {string}
  set default-image-file {string}
end
```

## config system auto-install

Parameter	Description	Type	Size	Default						
auto-install-config	Enable/disable auto install the config in USB disk.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable config.</td></tr><tr><td><i>disable</i></td><td>Disable config.</td></tr></table>	Option	Description	<i>enable</i>	Enable config.	<i>disable</i>	Disable config.			
Option	Description									
<i>enable</i>	Enable config.									
<i>disable</i>	Disable config.									
auto-install-image	Enable/disable auto install the image in USB disk.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable config.</td></tr><tr><td><i>disable</i></td><td>Disable config.</td></tr></table>	Option	Description	<i>enable</i>	Enable config.	<i>disable</i>	Disable config.			
Option	Description									
<i>enable</i>	Enable config.									
<i>disable</i>	Disable config.									

Parameter	Description	Type	Size	Default
default-config-file	Default config file name in USB disk.	string	Maximum length: 127	fgt_system.conf
default-image-file	Default image file name in USB disk.	string	Maximum length: 127	image.out

## config system auto-script

Configure auto script.

```
config system auto-script
    Description: Configure auto script.
    edit <name>
        set interval {integer}
        set output-size {integer}
        set repeat {integer}
        set script {var-string}
        set start [manual|auto]
        set timeout {integer}
    next
end
```

## config system auto-script

Parameter	Description	Type	Size	Default
interval	Repeat interval in seconds.	integer	Minimum value: 0 Maximum value: 31557600	0
name	Auto script name.	string	Maximum length: 35	
output-size	Number of megabytes to limit script output to.	integer	Minimum value: 10 Maximum value: 1024	10
repeat	Number of times to repeat this script (0 = infinite).	integer	Minimum value: 0 Maximum value: 65535	1
script	List of FortiOS CLI commands to repeat.	var-string	Maximum length: 1023	

Parameter	Description	Type	Size	Default
start	Script starting mode.	option	-	manual
	<b>Option</b>	<b>Description</b>		
	<i>manual</i>	Starting manually.		
	<i>auto</i>	Starting automatically.		
timeout	Maximum running time for this script in seconds (0 = no timeout).	integer	Minimum value: 0 Maximum value: 300	0

## config system automation-action

Action for automation stitches.

```
config system automation-action
  Description: Action for automation stitches.
  edit <name>
    set accprofile {string}
    set action-type [email|fortiexplorer-notification|...]
    set alicloud-access-key-id {string}
    set alicloud-access-key-secret {password}
    set alicloud-function-authorization [anonymous|function]
    set aws-api-key {password}
    set azure-api-key {password}
    set azure-function-authorization [anonymous|function|...]
    set description {var-string}
    set email-from {var-string}
    set email-subject {var-string}
    set email-to <name1>, <name2>, ...
    set execute-security-fabric [enable|disable]
    set http-body {var-string}
    config http-headers
      Description: Request headers.
      edit <id>
        set key {var-string}
        set value {var-string}
      next
    end
    set message {string}
    set message-type [text|json]
    set method [post|put|...]
    set minimum-interval {integer}
    set output-size {integer}
    set port {integer}
    set protocol [http|https]
    set replacement-message [enable|disable]
    set replacemsg-group {string}
    set script {var-string}
    set sdn-connector <name1>, <name2>, ...
```

```

    set security-tag {string}
    set system-action [reboot|shutdown|...]
    set timeout {integer}
    set tls-certificate {string}
    set uri {var-string}
    set verify-host-cert [enable|disable]
next
end

```

## config system automation-action

Parameter	Description	Type	Size	Default
accprofile	Access profile for CLI script action to access FortiGate features.	string	Maximum length: 35	
action-type	Action type.	option	-	alert
	<b>Option</b>	<b>Description</b>		
	email	Send notification email.		
	fortiexplorer-notification	Send push notification to FortiExplorer.		
	alert	Generate FortiOS dashboard alert.		
	disable-ssid	Disable interface.		
	system-actions	Perform immediate system operations on this FortiGate unit.		
	quarantine	Quarantine host.		
	quarantine-forticlient	Quarantine FortiClient by EMS.		
	quarantine-nsx	Quarantine NSX instance.		
	quarantine-fortinac	Quarantine host by FortiNAC.		
	ban-ip	Ban IP address.		
	aws-lambda	Send log data to integrated AWS service.		
	azure-function	Send log data to an Azure function.		
	google-cloud-function	Send log data to a Google Cloud function.		
	alicloud-function	Send log data to an AliCloud function.		
	webhook	Send an HTTP request.		
	cli-script	Run CLI script.		
slack-notification	Send a notification message to a Slack incoming webhook.			

Parameter	Description	Type	Size	Default
	Option	Description		
	microsoft-teams-notification	Send a notification message to a Microsoft Teams incoming webhook.		
alicloud-access-key-id	AliCloud AccessKey ID.	string	Maximum length: 35	
alicloud-access-key-secret	AliCloud AccessKey secret.	password	Not Specified	
alicloud-function-authorization	AliCloud function authorization type.	option	-	anonymous
	Option	Description		
	anonymous	Anonymous authorization (No authorization required).		
	function	Function authorization (Authorization required).		
aws-api-key	AWS API Gateway API key.	password	Not Specified	
azure-api-key	Azure function API key.	password	Not Specified	
azure-function-authorization	Azure function authorization level.	option	-	anonymous
	Option	Description		
	anonymous	Anonymous authorization level (No authorization required).		
	function	Function authorization level (Function or Host Key required).		
	admin	Admin authorization level (Master Host Key required).		
description	Description.	var-string	Maximum length: 255	
email-from	Email sender name.	var-string	Maximum length: 127	
email-subject	Email subject.	var-string	Maximum length: 511	
email-to <name>	Email addresses. Email address.	string	Maximum length: 255	
execute-security-fabric	Enable/disable execution of CLI script on all or only one FortiGate unit in the Security Fabric.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	CLI script executes on all FortiGate units in the Security Fabric.		
	<i>disable</i>	CLI script executes only on the FortiGate unit that the stitch is triggered.		
http-body	Request body (if necessary). Should be serialized json string.	var-string	Maximum length: 4095	
message	Message content.	string	Maximum length: 4095	%%log%%
message-type	Message type.	option	-	text
	<b>Option</b>	<b>Description</b>		
	<i>text</i>	Plaintext.		
	<i>json</i>	Custom JSON.		
method	Request method (POST, PUT, GET, PATCH or DELETE).	option	-	post
	<b>Option</b>	<b>Description</b>		
	<i>post</i>	POST.		
	<i>put</i>	PUT.		
	<i>get</i>	GET.		
	<i>patch</i>	PATCH.		
	<i>delete</i>	DELETE.		
minimum-interval	Limit execution to no more than once in this interval (in seconds).	integer	Minimum value: 0 Maximum value: 2592000	0
name	Name.	string	Maximum length: 64	
output-size	Number of megabytes to limit script output to.	integer	Minimum value: 1 Maximum value: 1024	10

Parameter	Description	Type	Size	Default								
port	Protocol port.	integer	Minimum value: 1 Maximum value: 65535	0								
protocol	Request protocol.	option	-	http								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>http</td><td>HTTP.</td></tr><tr><td>https</td><td>HTTPS.</td></tr></table>				Option	Description	http	HTTP.	https	HTTPS.		
	Option	Description										
	http	HTTP.										
https	HTTPS.											
replacement-message	Enable/disable replacement message.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable replacement message.</td></tr><tr><td>disable</td><td>Disable replacement message.</td></tr></table>				Option	Description	enable	Enable replacement message.	disable	Disable replacement message.		
	Option	Description										
	enable	Enable replacement message.										
disable	Disable replacement message.											
replacemsg-group	Replacement message group.	string	Maximum length: 35									
script	CLI script.	var-string	Maximum length: 1023									
sdn-connector <name>	NSX SDN connector names. SDN connector name.	string	Maximum length: 79									
security-tag	NSX security tag.	string	Maximum length: 255									
system-action	System action type.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>reboot</td><td>Reboot this FortiGate unit.</td></tr><tr><td>shutdown</td><td>Shutdown this FortiGate unit.</td></tr><tr><td>backup-config</td><td>Backup current configuration to the disk revisions.</td></tr></table>				Option	Description	reboot	Reboot this FortiGate unit.	shutdown	Shutdown this FortiGate unit.	backup-config	Backup current configuration to the disk revisions.
	Option	Description										
	reboot	Reboot this FortiGate unit.										
	shutdown	Shutdown this FortiGate unit.										
backup-config	Backup current configuration to the disk revisions.											
timeout	Maximum running time for this script in seconds (0 = no timeout).	integer	Minimum value: 0 Maximum value: 300	0								
tls-certificate	Custom TLS certificate for API request.	string	Maximum length: 35									

Parameter	Description	Type	Size	Default
uri	Request API URI.	var-string	Maximum length: 1023	
verify-host-cert	Enable/disable verification of the remote host certificate.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable verification of the remote host certificate.		
	<i>disable</i>	Disable verification of the remote host certificate.		

### config http-headers

Parameter	Description	Type	Size	Default
id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
key	Request header key.	var-string	Maximum length: 1023	
value	Request header value.	var-string	Maximum length: 4095	

## config system automation-destination

Automation destinations.

```

config system automation-destination
    Description: Automation destinations.
    edit <name>
        set destination <name1>, <name2>, ...
        set ha-group-id {integer}
        set type [fortigate|ha-cluster]
    next
end

```

### config system automation-destination

Parameter	Description	Type	Size	Default
destination <name>	Destinations. Destination.	string	Maximum length: 31	

Parameter	Description	Type	Size	Default
ha-group-id	Cluster group ID set for this destination.	integer	Minimum value: 0 Maximum value: 255	0
name	Name.	string	Maximum length: 35	
type	Destination type.	option	-	fortigate
	Option	Description		
	fortigate	FortiGate set as destination.		
	ha-cluster	HA cluster set as destination.		

## config system automation-stitch

Automation stitches.

```

config system automation-stitch
    Description: Automation stitches.
    edit <name>
        config actions
            Description: Configure stitch actions.
            edit <id>
                set action {string}
                set delay {integer}
                set required [enable|disable]
            next
        end
        set description {var-string}
        set destination <name1>, <name2>, ...
        set status [enable|disable]
        set trigger {string}
    next
end

```

## config system automation-stitch

Parameter	Description	Type	Size	Default
description	Description.	var-string	Maximum length: 255	
destination <name>	Serial number/HA group-name of destination devices. Destination name.	string	Maximum length: 79	
name	Name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
status	Enable/disable this stitch.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable stitch.		
	<i>disable</i>	Disable stitch.		
trigger	Trigger name.	string	Maximum length: 35	

## config actions

Parameter	Description	Type	Size	Default
id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
action	Action name.	string	Maximum length: 64	
delay	Delay before execution (in seconds).	integer	Minimum value: 0 Maximum value: 3600	0
required	Required in action chain.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Required in action chain.		
	<i>disable</i>	Not required in action chain.		

## config system automation-trigger

Trigger for automation stitches.

```
config system automation-trigger
  Description: Trigger for automation stitches.
  edit <name>
    set description {var-string}
    set event-type [ioc|event-log|...]
    set fabric-event-name {var-string}
    set fabric-event-severity {var-string}
    set faz-event-name {var-string}
    set faz-event-severity {var-string}
    set faz-event-tags {var-string}
```

```

config fields
    Description: Customized trigger field settings.
    edit <id>
        set name {string}
        set value {var-string}
    next
end
set license-type [forticare-support|fortiguard-webfilter|...]
set logid <id1>, <id2>, ...

set serial {var-string}
set trigger-datetime {datetime}
set trigger-day {integer}
set trigger-frequency [hourly|daily|...]
set trigger-hour {integer}
set trigger-minute {integer}
set trigger-type [event-based|scheduled]
set trigger-weekday [sunday|monday|...]
set vdom <name1>, <name2>, ...
next
end

```

## config system automation-trigger

Parameter	Description	Type	Size	Default
description	Description.	var-string	Maximum length: 255	
event-type	Event type.	option	-	ioc
	<b>Option</b>	<b>Description</b>		
	<i>ioc</i>	Indicator of compromise detected.		
	<i>event-log</i>	Use log ID as trigger.		
	<i>reboot</i>	Device reboot.		
	<i>low-memory</i>	Conserve mode due to low memory.		
	<i>high-cpu</i>	High CPU usage.		
	<i>license-near-expiry</i>	License near expiration date.		
	<i>local-cert-near-expiry</i>	The local certificate near expiration date.		
	<i>ha-failover</i>	HA failover.		
	<i>config-change</i>	Configuration change.		
	<i>security-rating-summary</i>	Security rating summary.

logid <id>	Log IDs to trigger event. Log ID.	integer	Minimum value: 1 Maximum value: 65535													
name	Name.	string	Maximum length: 35													
report-type	Security Rating report.	option	-	posture												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>posture</i></td><td>Posture report.</td></tr><tr><td><i>coverage</i></td><td>Coverage report.</td></tr><tr><td><i>optimization</i></td><td>Optimization report</td></tr><tr><td><i>any</i></td><td>Any report.</td></tr></table>	Option	Description	<i>posture</i>	Posture report.	<i>coverage</i>	Coverage report.	<i>optimization</i>	Optimization report	<i>any</i>	Any report.					
	Option	Description														
	<i>posture</i>	Posture report.														
	<i>coverage</i>	Coverage report.														
	<i>optimization</i>	Optimization report														
<i>any</i>	Any report.															
serial	Fabric connector serial number.	var-string	Maximum length: 255													
trigger-datetime	Trigger date and time (YYYY-MM-DD HH:MM:SS).	datetime	Not Specified	0000-00-00 00:00:00												
trigger-day	Day within a month to trigger.	integer	Minimum value: 1 Maximum value: 31	1												
trigger-frequency	Scheduled trigger frequency.	option	-	daily												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hourly</i></td><td>Run hourly.</td></tr><tr><td><i>daily</i></td><td>Run daily.</td></tr></table>	Option	Description	<i>hourly</i>	Run hourly.	<i>daily</i>	Run daily.									
	Option	Description														
	<i>hourly</i>	Run hourly.														
<i>daily</i>	Run daily.															

Parameter	Description	Type	Size	Default																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>weekly</i></td><td>Run weekly.</td></tr><tr><td><i>monthly</i></td><td>Run monthly.</td></tr><tr><td><i>once</i></td><td>Run once at specified date time.</td></tr></table>	Option	Description	<i>weekly</i>	Run weekly.	<i>monthly</i>	Run monthly.	<i>once</i>	Run once at specified date time.											
	Option	Description																		
	<i>weekly</i>	Run weekly.																		
	<i>monthly</i>	Run monthly.																		
	<i>once</i>	Run once at specified date time.																		
trigger-hour	Hour of the day on which to trigger.	integer	Minimum value: 0 Maximum value: 23	0																
trigger-minute	Minute of the hour on which to trigger.	integer	Minimum value: 0 Maximum value: 59	0																
trigger-type	Trigger type.	option	-	event-based																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>event-based</i></td><td>Event based trigger.</td></tr><tr><td><i>scheduled</i></td><td>Scheduled trigger.</td></tr></table>	Option	Description	<i>event-based</i>	Event based trigger.	<i>scheduled</i>	Scheduled trigger.													
	Option	Description																		
	<i>event-based</i>	Event based trigger.																		
<i>scheduled</i>	Scheduled trigger.																			
trigger-weekday	Day of week for trigger.	option	-																	
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sunday</i></td><td>Sunday.</td></tr><tr><td><i>monday</i></td><td>Monday.</td></tr><tr><td><i>tuesday</i></td><td>Tuesday.</td></tr><tr><td><i>wednesday</i></td><td>Wednesday.</td></tr><tr><td><i>thursday</i></td><td>Thursday.</td></tr><tr><td><i>friday</i></td><td>Friday.</td></tr><tr><td><i>saturday</i></td><td>Saturday.</td></tr></table>	Option	Description	<i>sunday</i>	Sunday.	<i>monday</i>	Monday.	<i>tuesday</i>	Tuesday.	<i>wednesday</i>	Wednesday.	<i>thursday</i>	Thursday.	<i>friday</i>	Friday.	<i>saturday</i>	Saturday.			
	Option	Description																		
	<i>sunday</i>	Sunday.																		
	<i>monday</i>	Monday.																		
	<i>tuesday</i>	Tuesday.																		
	<i>wednesday</i>	Wednesday.																		
	<i>thursday</i>	Thursday.																		
	<i>friday</i>	Friday.																		
	<i>saturday</i>	Saturday.																		
vdom <i>&lt;name&gt;</i>	Virtual domain(s) that this trigger is valid for. Virtual domain name.	string	Maximum length: 79																	

## config fields

Parameter	Description	Type	Size	Default
id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name.	string	Maximum length: 35	
value	Value.	var-string	Maximum length: 63	

## config system autoupdate schedule

Configure update schedule.

```
config system autoupdate schedule
    Description: Configure update schedule.
    set day [Sunday|Monday|...]
    set frequency [every|daily|...]
    set status [enable|disable]
    set time {user}
end
```

## config system autoupdate schedule

Parameter	Description	Type	Size	Default
day	Update day.	option	-	Monday
	Option	Description		
	<i>Sunday</i>	Update every Sunday.		
	<i>Monday</i>	Update every Monday.		
	<i>Tuesday</i>	Update every Tuesday.		
	<i>Wednesday</i>	Update every Wednesday.		
	<i>Thursday</i>	Update every Thursday.		
	<i>Friday</i>	Update every Friday.		
	<i>Saturday</i>	Update every Saturday.		
frequency	Update frequency.	option	-	automatic

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>every</i>	Time interval.		
	<i>daily</i>	Every day.		
	<i>weekly</i>	Every week.		
	<i>automatic</i>	Update automatically within every one hour period.		
status	Enable/disable scheduled updates.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
time	Update time.	user	Not Specified	

## config system autoupdate tunneling

Configure web proxy tunneling for the FDN.

```
config system autoupdate tunneling
    Description: Configure web proxy tunneling for the FDN.
    set address {string}
    set password {password}
    set port {integer}
    set status [enable|disable]
    set username {string}
end
```

## config system autoupdate tunneling

Parameter	Description	Type	Size	Default
address	Web proxy IP address or FQDN.	string	Maximum length: 63	
password	Web proxy password.	password	Not Specified	
port	Web proxy port.	integer	Minimum value: 0 Maximum value: 65535	0
status	Enable/disable web proxy tunneling.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
username	Web proxy username.	string	Maximum length: 49	

## config system bypass

This command is available for model(s): FortiGate 2500E, FortiGate 400E Bypass, FortiGate 800D, FortiGate 80F Bypass, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGate VM64, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure system bypass.

```
config system bypass
    Description: Configure system bypass.
    set auto-recover [enable|disable]
    set bypass-timeout [2|4|...]
    set bypass-watchdog [enable|disable]
    set poweroff-bypass [enable|disable]
end
```

## config system bypass

Parameter	Description	Type	Size	Default																
auto-recover *	Automatically recover from bypass mode after system reboot.	option	-	enable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Recover interfaces from bypass mode. The actual mode is determined by poweron-bypass setting.</td></tr><tr><td><i>disable</i></td><td>Keep interfaces in bypass mode if bypass was previously triggered.</td></tr></table>	Option	Description	<i>enable</i>	Recover interfaces from bypass mode. The actual mode is determined by poweron-bypass setting.	<i>disable</i>	Keep interfaces in bypass mode if bypass was previously triggered.													
Option	Description																			
<i>enable</i>	Recover interfaces from bypass mode. The actual mode is determined by poweron-bypass setting.																			
<i>disable</i>	Keep interfaces in bypass mode if bypass was previously triggered.																			
bypass-timeout *	timeout setting for bypass watchdog	option	-	10																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>2</td><td>2 second</td></tr><tr><td>4</td><td>4 second</td></tr><tr><td>6</td><td>6 second</td></tr><tr><td>8</td><td>8 second</td></tr><tr><td>10</td><td>10 second</td></tr><tr><td>12</td><td>12 second</td></tr><tr><td>14</td><td>14 second</td></tr></table>	Option	Description	2	2 second	4	4 second	6	6 second	8	8 second	10	10 second	12	12 second	14	14 second			
Option	Description																			
2	2 second																			
4	4 second																			
6	6 second																			
8	8 second																			
10	10 second																			
12	12 second																			
14	14 second																			
bypass-watchdog	watchdog to bypass interfaces in case of software/hardware failure	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable watchdog for bypass interfaces.</td></tr><tr><td><i>disable</i></td><td>Disable watchdog for bypass interfaces.</td></tr></table>	Option	Description	<i>enable</i>	Enable watchdog for bypass interfaces.	<i>disable</i>	Disable watchdog for bypass interfaces.													
Option	Description																			
<i>enable</i>	Enable watchdog for bypass interfaces.																			
<i>disable</i>	Disable watchdog for bypass interfaces.																			
poweroff-bypass *	set interface bypass state in power off	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable bypass when power off.</td></tr><tr><td><i>disable</i></td><td>Disable bypass when power off.</td></tr></table>	Option	Description	<i>enable</i>	Enable bypass when power off.	<i>disable</i>	Disable bypass when power off.													
Option	Description																			
<i>enable</i>	Enable bypass when power off.																			
<i>disable</i>	Disable bypass when power off.																			

\* This parameter may not exist in some models.

## config system central-management

Configure central management.

```

config system central-management
    Description: Configure central management.
    set allow-monitor [enable|disable]
    set allow-push-configuration [enable|disable]
    set allow-push-firmware [enable|disable]
    set allow-remote-firmware-upgrade [enable|disable]
    set allow-remote-lte-firmware-upgrade [enable|disable]
    set ca-cert {user}
    set enc-algorithm [default|high|...]
    set fmg {user}

    next
end
set type [fortimanager|fortiguard|...]
set use-elbc-vdom [enable|disable]
set vdom {string}
end

```

## config system central-management

Parameter	Description	Type	Size	Default
allow-monitor	Enable/disable allowing the central management server to remotely monitor this FortiGate unit.	option	-	enable
	Option	Description		
	enable	Enable remote monitoring of device.		
	disable	Disable remote monitoring of device.		
allow-push-configuration	Enable/disable allowing the central management server to push configuration changes to this FortiGate.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable push configuration.		
	<i>disable</i>	Disable push configuration.		
allow-push-firmware	Enable/disable allowing the central management server to push firmware updates to this FortiGate.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable push firmware.		
	<i>disable</i>	Disable push firmware.		
allow-remote-firmware-upgrade	Enable/disable remotely upgrading the firmware on this FortiGate from the central management server.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable remote firmware upgrade.		
	<i>disable</i>	Disable remote firmware upgrade.		
allow-remote-lte-firmware-upgrade *	Enable/disable remotely upgrading the lte firmware on this FortiGate from the central management server.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable remote lte firmware upgrade.		
	<i>disable</i>	Disable remote lte firmware upgrade.		
ca-cert	CA certificate to be used by FGFM protocol.	user	Not Specified	
enc-algorithm	Encryption strength for communications between the FortiGate and central management.	option	-	high
	<b>Option</b>	<b>Description</b>		
	<i>default</i>	High strength algorithms and medium-strength 128-bit key length algorithms.		
	<i>high</i>	128-bit and larger key length algorithms.		
	<i>low</i>	64-bit or 56-bit key length algorithms without export restrictions.		
fmg	IP address or FQDN of the FortiManager.	user	Not Specified	

Parameter	Description	Type	Size	Default								
fmg-source-ip	IPv4 source address that this FortiGate uses when communicating with FortiManager.	ipv4-address	Not Specified	0.0.0.0								
fmg-source-ip6	IPv6 source address that this FortiGate uses when communicating with FortiManager.	ipv6-address	Not Specified	::								
fmg-update-port	Port used to communicate with FortiManager that is acting as a FortiGuard update server.	option	-	8890								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>8890</td><td>Use port 8890 to communicate with FortiManager that is acting as a FortiGuard update server.</td></tr><tr><td>443</td><td>Use port 443 to communicate with FortiManager that is acting as a FortiGuard update server.</td></tr></table>				Option	Description	8890	Use port 8890 to communicate with FortiManager that is acting as a FortiGuard update server.	443	Use port 443 to communicate with FortiManager that is acting as a FortiGuard update server.		
Option	Description											
8890	Use port 8890 to communicate with FortiManager that is acting as a FortiGuard update server.											
443	Use port 443 to communicate with FortiManager that is acting as a FortiGuard update server.											
fortigate-cloud-sso-default-profile	Override access profile.	string	Maximum length: 35									
include-default-servers	Enable/disable inclusion of public FortiGuard servers in the override server list.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable inclusion of public FortiGuard servers in the override server list.</td></tr><tr><td>disable</td><td>Disable inclusion of public FortiGuard servers in the override server list.</td></tr></table>				Option	Description	enable	Enable inclusion of public FortiGuard servers in the override server list.	disable	Disable inclusion of public FortiGuard servers in the override server list.		
Option	Description											
enable	Enable inclusion of public FortiGuard servers in the override server list.											
disable	Disable inclusion of public FortiGuard servers in the override server list.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.
Option	Description											
auto	Set outgoing interface automatically.											
sdwan	Set outgoing interface by SD-WAN or policy routing rules.											
specify	Set outgoing interface manually.											
local-cert	Certificate to be used by FGFM protocol.	string	Maximum length: 35									
ltefw-upgrade-frequency *	Set LTE firmware auto pushdown frequency.	option	-									

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>everyHour</i></td><td>Auto check and pushdown LTE firmware every hour</td></tr><tr><td><i>every12hour</i></td><td>Auto check and pushdown LTE firmware every 12 hours</td></tr><tr><td><i>everyDay</i></td><td>Auto check and pushdown LTE firmware every day</td></tr><tr><td><i>everyWeek</i></td><td>Auto check and pushdown LTE firmware every week</td></tr></table>	Option	Description	<i>everyHour</i>	Auto check and pushdown LTE firmware every hour	<i>every12hour</i>	Auto check and pushdown LTE firmware every 12 hours	<i>everyDay</i>	Auto check and pushdown LTE firmware every day	<i>everyWeek</i>	Auto check and pushdown LTE firmware every week			
	Option	Description												
	<i>everyHour</i>	Auto check and pushdown LTE firmware every hour												
	<i>every12hour</i>	Auto check and pushdown LTE firmware every 12 hours												
	<i>everyDay</i>	Auto check and pushdown LTE firmware every day												
<i>everyWeek</i>	Auto check and pushdown LTE firmware every week													
ltefw-upgrade-time *	Schedule next LTE firmware upgrade time (Local Time). Format: YYYY-MM-DD HH:MM:SS	string	Maximum length: 35											
mode	Central management mode.	option	-	normal										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>normal</i></td><td>Manage and configure this FortiGate from FortiManager.</td></tr><tr><td><i>backup</i></td><td>Manage and configure this FortiGate locally and back up its configuration to FortiManager.</td></tr></table>	Option	Description	<i>normal</i>	Manage and configure this FortiGate from FortiManager.	<i>backup</i>	Manage and configure this FortiGate locally and back up its configuration to FortiManager.							
	Option	Description												
	<i>normal</i>	Manage and configure this FortiGate from FortiManager.												
<i>backup</i>	Manage and configure this FortiGate locally and back up its configuration to FortiManager.													
schedule-config-restore	Enable/disable allowing the central management server to restore the configuration of this FortiGate.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable scheduled configuration restore.</td></tr><tr><td><i>disable</i></td><td>Disable scheduled configuration restore.</td></tr></table>	Option	Description	<i>enable</i>	Enable scheduled configuration restore.	<i>disable</i>	Disable scheduled configuration restore.							
	Option	Description												
	<i>enable</i>	Enable scheduled configuration restore.												
<i>disable</i>	Disable scheduled configuration restore.													
schedule-script-restore	Enable/disable allowing the central management server to restore the scripts stored on this FortiGate.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable scheduled script restore.</td></tr><tr><td><i>disable</i></td><td>Disable scheduled script restore.</td></tr></table>	Option	Description	<i>enable</i>	Enable scheduled script restore.	<i>disable</i>	Disable scheduled script restore.							
	Option	Description												
	<i>enable</i>	Enable scheduled script restore.												
<i>disable</i>	Disable scheduled script restore.													
serial-number	Serial number.	user	Not Specified											
type	Central management type.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortimanager</i></td><td>FortiManager.</td></tr><tr><td><i>fortiguard</i></td><td>Central management of this FortiGate using FortiCloud.</td></tr><tr><td><i>none</i></td><td>No central management.</td></tr></table>	Option	Description	<i>fortimanager</i>	FortiManager.	<i>fortiguard</i>	Central management of this FortiGate using FortiCloud.	<i>none</i>	No central management.					
	Option	Description												
	<i>fortimanager</i>	FortiManager.												
	<i>fortiguard</i>	Central management of this FortiGate using FortiCloud.												
<i>none</i>	No central management.													
use-elbc-vdom *	Enable/disable use of special ELBC config sync VDOM to connect to FortiManager.	option	-	disable										

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	enable		
	<i>disable</i>	disable		
vdom	Virtual domain (VDOM) name to use when communicating with FortiManager.	string	Maximum length: 31	root

\* This parameter may not exist in some models.

### config server-list

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server-type	FortiGuard service type.	option	-	
	<b>Option</b>	<b>Description</b>		
	<i>update</i>	AV, IPS, and AV-query update server.		
	<i>rating</i>	Web filter and anti-spam rating server.		
	<i>iot-query</i>	IoT query server.		
	<i>iot-collect</i>	IoT device collection server.		
addr-type	Indicate whether the FortiGate communicates with the override server using an IPv4 address, an IPv6 address or a FQDN.	option	-	ipv4
	<b>Option</b>	<b>Description</b>		
	<i>ipv4</i>	IPv4 address.		
	<i>ipv6</i>	IPv6 address.		
	<i>fqdn</i>	FQDN.		
server-address	IPv4 address of override server.	ipv4-address	Not Specified	0.0.0.0
server-address6	IPv6 address of override server.	ipv6-address	Not Specified	::
fqdn	FQDN address of override server.	string	Maximum length: 255	

## config system console

Configure console.

```
config system console
  Description: Configure console.
  set baudrate [9600|19200|...]
  set fortiexplorer [enable|disable]
  set login [enable|disable]
  set mode [batch|line]
  set output [standard|more]
end
```

## config system console

Parameter	Description	Type	Size	Default
baudrate	Console baud rate.	option	-	9600
	<b>Option</b>	<b>Description</b>		
	9600	9600		
	19200	19200		
	38400	38400		
	57600	57600		
	115200	115200		
	fortiexplorer *	Enable/disable access for FortiExplorer.	option	-
	<b>Option</b>	<b>Description</b>		
	enable	Enable FortiExplorer access.		
	disable	Disable FortiExplorer access.		
login	Enable/disable serial console and FortiExplorer.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	enable	Console login enable.		
	disable	Console login disable.		
mode	Console mode.	option	-	line
	<b>Option</b>	<b>Description</b>		
	batch	Batch mode.		
	line	Line mode.		

Parameter	Description	Type	Size	Default
output	Console output mode.	option	-	more
	Option	Description		
	<i>standard</i>	Standard output.		
	<i>more</i>	More page output.		

\* This parameter may not exist in some models.

## config system csf

Add this FortiGate to a Security Fabric or set up a new Security Fabric on this FortiGate.

```

config system csf
    Description: Add this FortiGate to a Security Fabric or set up a new Security Fabric on
    this FortiGate.
    set accept-auth-by-cert [disable|enable]
    set authorization-request-type [serial|certificate]
    set certificate {string}
    set configuration-sync [default|local]
    set downstream-access [enable|disable]
    set downstream-accprofile {string}
    config fabric-connector
        Description: Fabric connector configuration.
        edit <serial>
            set accprofile {string}
            set configuration-write-access [enable|disable]
        next
    end
    set fabric-object-unification [default|local]

    set file-quota-warning {integer}
    set forticloud-account-enforcement [enable|disable]
    set group-name {string}
    set group-password {password}
    set log-unification [disable|enable]
    set saml-configuration-sync [default|local]
    set status [enable|disable]
    config trusted-list
        Description: Pre-authorized and blocked security fabric nodes.
        edit <name>
            set authorization-type [serial|certificate]
            set serial {string}
            set certificate {var-string}
            set action [accept|deny]
            set ha-members {string}
            set downstream-authorization [enable|disable]
            set index {integer}
        next
    end
end

```

```

set upstream {string}
set upstream-port {integer}
end

```

## config system csf

Parameter	Description	Type	Size	Default						
accept-auth-by-cert	Accept connections with unknown certificates and ask admin for approval.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not accept SSL connections with unknown certificates.</td></tr><tr><td><i>enable</i></td><td>Accept SSL connections without automatic certificate verification.</td></tr></table>	Option	Description	<i>disable</i>	Do not accept SSL connections with unknown certificates.	<i>enable</i>	Accept SSL connections without automatic certificate verification.			
Option	Description									
<i>disable</i>	Do not accept SSL connections with unknown certificates.									
<i>enable</i>	Accept SSL connections without automatic certificate verification.									
authorization-request-type	Authorization request type.	option	-	serial						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>serial</i></td><td>Request verification by serial number.</td></tr><tr><td><i>certificate</i></td><td>Request verification by certificate.</td></tr></table>	Option	Description	<i>serial</i>	Request verification by serial number.	<i>certificate</i>	Request verification by certificate.			
Option	Description									
<i>serial</i>	Request verification by serial number.									
<i>certificate</i>	Request verification by certificate.									
certificate	Certificate.	string	Maximum length: 35							
configuration-sync	Configuration sync mode.	option	-	default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>Synchronize configuration for IPAM, FortiAnalyzer, FortiSandbox, and Central Management to root node.</td></tr><tr><td><i>local</i></td><td>Do not synchronize configuration with root node.</td></tr></table>	Option	Description	<i>default</i>	Synchronize configuration for IPAM, FortiAnalyzer, FortiSandbox, and Central Management to root node.	<i>local</i>	Do not synchronize configuration with root node.			
Option	Description									
<i>default</i>	Synchronize configuration for IPAM, FortiAnalyzer, FortiSandbox, and Central Management to root node.									
<i>local</i>	Do not synchronize configuration with root node.									
downstream-access	Enable/disable downstream device access to this device's configuration and data.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable downstream device access to this device's configuration and data.</td></tr><tr><td><i>disable</i></td><td>Disable downstream device access to this device's configuration and data.</td></tr></table>	Option	Description	<i>enable</i>	Enable downstream device access to this device's configuration and data.	<i>disable</i>	Disable downstream device access to this device's configuration and data.			
Option	Description									
<i>enable</i>	Enable downstream device access to this device's configuration and data.									
<i>disable</i>	Disable downstream device access to this device's configuration and data.									
downstream-acccprofile	Default access profile for requests from downstream devices.	string	Maximum length: 35							
fabric-object-unification	Fabric CMDB Object Unification.	option	-	default						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>default</i>	Global CMDB objects will be synchronized in Security Fabric.		
	<i>local</i>	Global CMDB objects will not be synchronized to and from this device.		
fabric-workers	Number of worker processes for Security Fabric daemon.	integer	Minimum value: 1 Maximum value: 4	2
file-mgmt	Enable/disable Security Fabric daemon file management.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable daemon file management.		
	<i>disable</i>	Disable daemon file management.		
file-quota	Maximum amount of memory that can be used by the daemon files (in bytes).	integer	Minimum value: 0 Maximum value: 4294967295	268435456
file-quota-warning	Warn when the set percentage of quota has been used.	integer	Minimum value: 1 Maximum value: 99	90
forticloud-account-enforcement	Fabric FortiCloud account unification.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FortiCloud account ID matching for Security Fabric.		
	<i>disable</i>	Disable FortiCloud account ID matching for Security Fabric.		
group-name	Security Fabric group name. All FortiGates in a Security Fabric must have the same group name.	string	Maximum length: 35	
group-password	Security Fabric group password. All FortiGates in a Security Fabric must have the same group password.	password	Not Specified	
log-unification	Enable/disable broadcast of discovery messages for log unification.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable broadcast of discovery messages for log unification.		
	<i>enable</i>	Enable broadcast of discovery messages for log unification.		
saml-configuration-sync	SAML setting configuration synchronization.	option	-	default
	<b>Option</b>	<b>Description</b>		
	<i>default</i>	SAML setting for fabric members is created by fabric root.		
	<i>local</i>	Do not apply SAML configuration generated by root.		
status	Enable/disable Security Fabric.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Security Fabric.		
	<i>disable</i>	Disable Security Fabric.		
upstream	IP/FQDN of the FortiGate upstream from this FortiGate in the Security Fabric.	string	Maximum length: 255	
upstream-port	The port number to use to communicate with the FortiGate upstream from this FortiGate in the Security Fabric.	integer	Minimum value: 1 Maximum value: 65535	8013

### config fabric-connector

Parameter	Description	Type	Size	Default						
serial	Serial.	string	Maximum length: 19							
accprofile	Override access profile.	string	Maximum length: 35							
configuration-write-access	Enable/disable downstream device write access to configuration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable downstream device write access to configuration.</td></tr><tr><td>disable</td><td>Disable downstream device write access to configuration.</td></tr></table>				Option	Description	enable	Enable downstream device write access to configuration.	disable	Disable downstream device write access to configuration.
Option	Description									
enable	Enable downstream device write access to configuration.									
disable	Disable downstream device write access to configuration.									

## config trusted-list

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 35	
authorization-type	Authorization type.	option	-	serial
	Option	Description		
	serial	Verify downstream by serial number.		
	certificate	Verify downstream by certificate.		
serial	Serial.	string	Maximum length: 19	
certificate	Certificate.	var-string	Maximum length: 32767	
action	Security fabric authorization action.	option	-	accept
	Option	Description		
	accept	Accept authorization request.		
	deny	Deny authorization request.		
ha-members	HA members.	string	Maximum length: 19	
downstream-authorization	Trust authorizations by this node's administrator.	option	-	disable
	Option	Description		
	enable	Enable downstream authorization.		
	disable	Disable downstream authorization.		
index	Index of the downstream in tree.	integer	Minimum value: 1 Maximum value: 1024	0

## config system custom-language

Configure custom languages.

```
config system custom-language
  Description: Configure custom languages.
  edit <name>
```

```

        set comments {var-string}
        set filename {string}
    next
end

```

## config system custom-language

Parameter	Description	Type	Size	Default
comments	Comment.	var-string	Maximum length: 255	
filename	Custom language file path.	string	Maximum length: 63	
name	Name.	string	Maximum length: 35	

## config system ddns

Configure DDNS.

```

config system ddns
    Description: Configure DDNS.
    edit <ddnsid>
        set addr-type [ipv4|ipv6]
        set bound-ip {string}
        set clear-text [disable|enable]
        set ddns-auth [disable|tsig]
        set ddns-domain {string}
        set ddns-key {password_aes256}
        set ddns-keyname {string}
        set ddns-password {password}
        set ddns-server [dyndns.org|dyns.net|...]
        set ddns-server-addr <addr1>, <addr2>, ...
        set ddns-sn {string}
        set ddns-ttl {integer}
        set ddns-username {string}
        set ddns-zone {string}
        set monitor-interface <interface-name1>, <interface-name2>, ...
        set server-type [ipv4|ipv6]
        set ssl-certificate {string}
        set update-interval {integer}
        set use-public-ip [disable|enable]
    next
end

```

## config system ddns

Parameter	Description	Type	Size	Default										
addr-type	Address type of interface address in DDNS update.	option	-	ipv4										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>Use IPv4 address of the interface.</td></tr><tr><td>ipv6</td><td>Use IPv6 address of the interface.</td></tr></table>	Option	Description	ipv4	Use IPv4 address of the interface.	ipv6	Use IPv6 address of the interface.							
Option	Description													
ipv4	Use IPv4 address of the interface.													
ipv6	Use IPv6 address of the interface.													
bound-ip	Bound IP address.	string	Maximum length: 46											
clear-text	Enable/disable use of clear text connections.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of clear text connections.</td></tr><tr><td>enable</td><td>Enable use of clear text connections.</td></tr></table>	Option	Description	disable	Disable use of clear text connections.	enable	Enable use of clear text connections.							
Option	Description													
disable	Disable use of clear text connections.													
enable	Enable use of clear text connections.													
ddns-auth	Enable/disable TSIG authentication for your DDNS server.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable DDNS authentication.</td></tr><tr><td>tsig</td><td>Enable TSIG authentication based on RFC2845.</td></tr></table>	Option	Description	disable	Disable DDNS authentication.	tsig	Enable TSIG authentication based on RFC2845.							
Option	Description													
disable	Disable DDNS authentication.													
tsig	Enable TSIG authentication based on RFC2845.													
ddns-domain	Your fully qualified domain name. For example, yourname.ddns.com.	string	Maximum length: 64											
ddns-key	DDNS update key (base 64 encoding).	password_aes256	Not Specified											
ddns-keyname	DDNS update key name.	string	Maximum length: 64											
ddns-password	DDNS password.	password	Not Specified											
ddns-server	Select a DDNS service provider.	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>dyndns.org</td><td>members.dyndns.org and dnsalias.com</td></tr><tr><td>dyns.net</td><td>www.dyns.net</td></tr><tr><td>tzo.com</td><td>rh.tzo.com</td></tr><tr><td>vavic.com</td><td>Peanut Hull</td></tr></table>	Option	Description	dyndns.org	members.dyndns.org and dnsalias.com	dyns.net	www.dyns.net	tzo.com	rh.tzo.com	vavic.com	Peanut Hull			
Option	Description													
dyndns.org	members.dyndns.org and dnsalias.com													
dyns.net	www.dyns.net													
tzo.com	rh.tzo.com													
vavic.com	Peanut Hull													

Parameter	Description	Type	Size	Default																	
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dipdns.net</i></td><td>dipdnsserver.dipdns.com</td></tr><tr><td><i>now.net.cn</i></td><td>ip.todayisp.com</td></tr><tr><td><i>dhs.org</i></td><td>members.dhs.org</td></tr><tr><td><i>easydns.com</i></td><td>members.easydns.com</td></tr><tr><td><i>genericDDNS</i></td><td>Generic DDNS based on RFC2136.</td></tr><tr><td><i>FortiGuardDDNS</i></td><td>FortiGuard DDNS service.</td></tr><tr><td><i>noip.com</i></td><td>dynupdate.no-ip.com</td></tr></table>		Option	Description	<i>dipdns.net</i>	dipdnsserver.dipdns.com	<i>now.net.cn</i>	ip.todayisp.com	<i>dhs.org</i>	members.dhs.org	<i>easydns.com</i>	members.easydns.com	<i>genericDDNS</i>	Generic DDNS based on RFC2136.	<i>FortiGuardDDNS</i>	FortiGuard DDNS service.	<i>noip.com</i>	dynupdate.no-ip.com			
	Option	Description																			
	<i>dipdns.net</i>	dipdnsserver.dipdns.com																			
	<i>now.net.cn</i>	ip.todayisp.com																			
	<i>dhs.org</i>	members.dhs.org																			
	<i>easydns.com</i>	members.easydns.com																			
	<i>genericDDNS</i>	Generic DDNS based on RFC2136.																			
	<i>FortiGuardDDNS</i>	FortiGuard DDNS service.																			
<i>noip.com</i>	dynupdate.no-ip.com																				
ddns-server-addr <addr>	Generic DDNS server IP/FQDN list. IP address or FQDN of the server.	string	Maximum length: 256																		
ddns-sn	DDNS Serial Number.	string	Maximum length: 64																		
ddns-ttl	Time-to-live for DDNS packets.	integer	Minimum value: 60 Maximum value: 86400	300																	
ddns-username	DDNS user name.	string	Maximum length: 64																		
ddns-zone	Zone of your domain name (for example, DDNS.com).	string	Maximum length: 64																		
ddnsid	DDNS ID.	integer	Minimum value: 0 Maximum value: 4294967295	0																	
monitor-interface <interface- name>	Monitored interface. Interface name.	string	Maximum length: 79																		
server-type	Address type of the DDNS server.	option	-	ipv4																	
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ipv4</i></td><td>Use IPv4 addressing.</td></tr><tr><td><i>ipv6</i></td><td>Use IPv6 addressing.</td></tr></table>		Option	Description	<i>ipv4</i>	Use IPv4 addressing.	<i>ipv6</i>	Use IPv6 addressing.													
	Option	Description																			
	<i>ipv4</i>	Use IPv4 addressing.																			
<i>ipv6</i>	Use IPv6 addressing.																				
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_ Factory																	

Parameter	Description	Type	Size	Default						
update-interval	DDNS update interval.	integer	Minimum value: 60 Maximum value: 2592000	0						
use-public-ip	Enable/disable use of public IP address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of public IP address.</td></tr><tr><td><i>enable</i></td><td>Enable use of public IP address.</td></tr></table>	Option	Description	<i>disable</i>	Disable use of public IP address.	<i>enable</i>	Enable use of public IP address.			
Option	Description									
<i>disable</i>	Disable use of public IP address.									
<i>enable</i>	Enable use of public IP address.									

## config system dedicated-mgmt

Configure dedicated management.

```

config system dedicated-mgmt
    Description: Configure dedicated management.
    set default-gateway {ipv4-address}
    set dhcp-end-ip {ipv4-address}
    set dhcp-netmask {ipv4-netmask}
    set dhcp-server [enable|disable]
    set dhcp-start-ip {ipv4-address}
    set interface {string}
    set status [enable|disable]
end

```

## config system dedicated-mgmt

Parameter	Description	Type	Size	Default
default-gateway	Default gateway for dedicated management interface.	ipv4-address	Not Specified	0.0.0.0
dhcp-end-ip	DHCP end IP for dedicated management.	ipv4-address	Not Specified	0.0.0.0
dhcp-netmask	DHCP netmask.	ipv4-netmask	Not Specified	0.0.0.0
dhcp-server	Enable/disable DHCP server on management interface.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable DHCP server on management port.		
	<i>disable</i>	Disable DHCP server on management port.		

Parameter	Description	Type	Size	Default
dhcp-start-ip	DHCP start IP for dedicated management.	ipv4-address	Not Specified	0.0.0.0
interface	Dedicated management interface.	string	Maximum length: 15	
status	Enable/disable dedicated management.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

## config system device-upgrade

Independent upgrades for managed devices.

```
config system device-upgrade
  Description: Independent upgrades for managed devices.
  edit <serial>
    set device-type [fortiswitch|fortiap|...]
    set failure-reason [none|internal|...]
    set maximum-minutes {integer}
    set setup-time {user}
    set status [disabled|initialized|...]
    set time {user}
    set timing [immediate|scheduled]
    set upgrade-path {user}
  next
end
```

## config system device-upgrade

Parameter	Description	Type	Size	Default
device-type	Fortinet device type.	option	-	fortiswitch
	Option	Description		
	<i>fortiswitch</i>	This device is a FortiSwitch.		
	<i>fortiap</i>	This device is a FortiAP.		
	<i>fortiextender</i>	This device is a FortiExtender.		
failure-reason	Upgrade failure reason.	option	-	none

Parameter	Description	Type	Size	Default																																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No failure.</td></tr><tr><td><i>internal</i></td><td>An internal error occurred.</td></tr><tr><td><i>timeout</i></td><td>The upgrade timed out.</td></tr><tr><td><i>device-type-unsupported</i></td><td>The device type was not supported by the FortiGate.</td></tr><tr><td><i>download-failed</i></td><td>The image could not be downloaded.</td></tr><tr><td><i>device-missing</i></td><td>The device was disconnected from the FortiGate.</td></tr><tr><td><i>version-unavailable</i></td><td>An image matching the device and version could not be found.</td></tr><tr><td><i>staging-failed</i></td><td>The image could not be pushed to the device.</td></tr><tr><td><i>reboot-failed</i></td><td>The device could not be rebooted.</td></tr><tr><td><i>device-not-reconnected</i></td><td>The device did not reconnect after rebooting.</td></tr><tr><td><i>node-not-ready</i></td><td>A device in the Security Fabric tree was not ready.</td></tr><tr><td><i>no-final-confirmation</i></td><td>The coordinating FortiGate did not confirm the upgrade.</td></tr><tr><td><i>no-confirmation-query</i></td><td>A downstream FortiGate did not initiate final confirmation.</td></tr><tr><td><i>config-error-log-nonempty</i></td><td>Configuration errors encountered during the upgrade.</td></tr><tr><td><i>node-failed</i></td><td>A device in the Security Fabric tree failed.</td></tr></table>	Option	Description	<i>none</i>	No failure.	<i>internal</i>	An internal error occurred.	<i>timeout</i>	The upgrade timed out.	<i>device-type-unsupported</i>	The device type was not supported by the FortiGate.	<i>download-failed</i>	The image could not be downloaded.	<i>device-missing</i>	The device was disconnected from the FortiGate.	<i>version-unavailable</i>	An image matching the device and version could not be found.	<i>staging-failed</i>	The image could not be pushed to the device.	<i>reboot-failed</i>	The device could not be rebooted.	<i>device-not-reconnected</i>	The device did not reconnect after rebooting.	<i>node-not-ready</i>	A device in the Security Fabric tree was not ready.	<i>no-final-confirmation</i>	The coordinating FortiGate did not confirm the upgrade.	<i>no-confirmation-query</i>	A downstream FortiGate did not initiate final confirmation.	<i>config-error-log-nonempty</i>	Configuration errors encountered during the upgrade.	<i>node-failed</i>	A device in the Security Fabric tree failed.			
	Option	Description																																		
	<i>none</i>	No failure.																																		
	<i>internal</i>	An internal error occurred.																																		
	<i>timeout</i>	The upgrade timed out.																																		
	<i>device-type-unsupported</i>	The device type was not supported by the FortiGate.																																		
	<i>download-failed</i>	The image could not be downloaded.																																		
	<i>device-missing</i>	The device was disconnected from the FortiGate.																																		
	<i>version-unavailable</i>	An image matching the device and version could not be found.																																		
	<i>staging-failed</i>	The image could not be pushed to the device.																																		
	<i>reboot-failed</i>	The device could not be rebooted.																																		
	<i>device-not-reconnected</i>	The device did not reconnect after rebooting.																																		
	<i>node-not-ready</i>	A device in the Security Fabric tree was not ready.																																		
	<i>no-final-confirmation</i>	The coordinating FortiGate did not confirm the upgrade.																																		
	<i>no-confirmation-query</i>	A downstream FortiGate did not initiate final confirmation.																																		
<i>config-error-log-nonempty</i>	Configuration errors encountered during the upgrade.																																			
<i>node-failed</i>	A device in the Security Fabric tree failed.																																			
maximum-minutes	Maximum number of minutes to allow for immediate upgrade preparation.	integer	Minimum value: 5 Maximum value: 10080	15																																
serial	Serial number of the node to include.	string	Maximum length: 79																																	
setup-time	Upgrade preparation start time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified																																	
status	Current status of the upgrade.	option	-	disabled																																

Parameter	Description	Type	Size	Default																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disabled</i></td><td>No federated upgrade has been configured.</td></tr><tr><td><i>initialized</i></td><td>The upgrade has been configured.</td></tr><tr><td><i>downloading</i></td><td>The image is downloading in preparation for the upgrade.</td></tr><tr><td><i>device-disconnected</i></td><td>The image downloads are complete, but one or more devices have disconnected.</td></tr><tr><td><i>ready</i></td><td>The image download finished and the upgrade is pending.</td></tr><tr><td><i>coordinating</i></td><td>The upgrade is coordinating with other running upgrades.</td></tr><tr><td><i>staging</i></td><td>The upgrade is confirmed and images are being staged.</td></tr><tr><td><i>final-check</i></td><td>The upgrade is ready and final checks are in progress.</td></tr><tr><td><i>upgrade-devices</i></td><td>The upgrade is ready and devices are being rebooted.</td></tr><tr><td><i>cancelled</i></td><td>The upgrade was cancelled due to the tree not being ready.</td></tr><tr><td><i>confirmed</i></td><td>The upgrade was confirmed and reboots are running.</td></tr><tr><td><i>done</i></td><td>The upgrade completed successfully.</td></tr><tr><td><i>failed</i></td><td>The upgrade failed due to a local issue.</td></tr></table>	Option	Description	<i>disabled</i>	No federated upgrade has been configured.	<i>initialized</i>	The upgrade has been configured.	<i>downloading</i>	The image is downloading in preparation for the upgrade.	<i>device-disconnected</i>	The image downloads are complete, but one or more devices have disconnected.	<i>ready</i>	The image download finished and the upgrade is pending.	<i>coordinating</i>	The upgrade is coordinating with other running upgrades.	<i>staging</i>	The upgrade is confirmed and images are being staged.	<i>final-check</i>	The upgrade is ready and final checks are in progress.	<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.	<i>confirmed</i>	The upgrade was confirmed and reboots are running.	<i>done</i>	The upgrade completed successfully.	<i>failed</i>	The upgrade failed due to a local issue.			
	Option	Description																														
	<i>disabled</i>	No federated upgrade has been configured.																														
	<i>initialized</i>	The upgrade has been configured.																														
	<i>downloading</i>	The image is downloading in preparation for the upgrade.																														
	<i>device-disconnected</i>	The image downloads are complete, but one or more devices have disconnected.																														
	<i>ready</i>	The image download finished and the upgrade is pending.																														
	<i>coordinating</i>	The upgrade is coordinating with other running upgrades.																														
	<i>staging</i>	The upgrade is confirmed and images are being staged.																														
	<i>final-check</i>	The upgrade is ready and final checks are in progress.																														
	<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.																														
	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.																														
	<i>confirmed</i>	The upgrade was confirmed and reboots are running.																														
	<i>done</i>	The upgrade completed successfully.																														
<i>failed</i>	The upgrade failed due to a local issue.																															
time	Scheduled upgrade execution time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified																													
timing	Run immediately or at a scheduled time.	option	-	immediate																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>immediate</i></td><td>Begin the upgrade immediately.</td></tr><tr><td><i>scheduled</i></td><td>Begin the upgrade at a configured time.</td></tr></table>	Option	Description	<i>immediate</i>	Begin the upgrade immediately.	<i>scheduled</i>	Begin the upgrade at a configured time.																									
	Option	Description																														
	<i>immediate</i>	Begin the upgrade immediately.																														
<i>scheduled</i>	Begin the upgrade at a configured time.																															
upgrade-path	Fortinet OS image versions to upgrade through in major-minor-patch format, such as 7-0-4.	user	Not Specified																													

## config system dhcp6 server

prefix-mode	Assigning a prefix from a DHCPv6 client or RA.	option	-	dhcp6								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>dhcp6</i>	Use delegated prefix from a DHCPv6 client.		
	<i>ra</i>	Use prefix from RA.		
rapid-commit	Enable/disable allow/disallow rapid commit.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Do not allow rapid commit.		
	<i>enable</i>	Allow rapid commit.		
status	Enable/disable this DHCPv6 configuration.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Enable this DHCPv6 server configuration.		
	<i>enable</i>	Disable this DHCPv6 server configuration.		
subnet	Subnet or subnet-id if the IP mode is delegated.	ipv6-prefix	Not Specified	::/0
upstream-interface	Interface name from where delegated information is provided.	string	Maximum length: 15	

### config ip-range

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
start-ip	Start of IP range.	ipv6-address	Not Specified	::
end-ip	End of IP range.	ipv6-address	Not Specified	::

## config prefix-range

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
start-prefix	Start of prefix range.	ipv6-address	Not Specified	::
end-prefix	End of prefix range.	ipv6-address	Not Specified	::
prefix-length	Prefix length.	integer	Minimum value: 1 Maximum value: 128	0

## config system dhcp server

Configure DHCP servers.

```
config system dhcp server
  Description: Configure DHCP servers.
  edit <id>
    set auto-configuration [disable|enable]
    set auto-managed-status [disable|enable]
    set conflicted-ip-timeout {integer}
    set ddns-auth [disable|tsig]

## config system dhcp server

Parameter	Description	Type	Size	Default
auto-configuration	Enable/disable auto configuration.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable auto configuration.		
	<i>enable</i>	Enable auto configuration.		
auto-managed-status	Enable/disable use of this DHCP server once this interface has been assigned an IP address from FortiIPAM.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable use of this DHCP server once this interface has been assigned an IP address from FortiIPAM.		
	<i>enable</i>	Enable use of this DHCP server once this interface has been assigned an IP address from FortiIPAM.		
conflicted-ip-timeout	Time in seconds to wait after a conflicted IP address is removed from the DHCP range before it can be reused.	integer	Minimum value: 60 Maximum value: 8640000	1800
ddns-auth	DDNS authentication mode.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable DDNS authentication.		
	<i>tsig</i>	TSIG based on RFC2845.		
ddns-key	DDNS update key (base 64 encoding).	password_ aes256	Not Specified	
ddns-keyname	DDNS update key name.	string	Maximum length: 64	
ddns-server-ip	DDNS server IP.	ipv4-address	Not Specified	0.0.0.0
ddns-ttl	TTL.	integer	Minimum value: 60 Maximum value: 86400	300
ddns-update	Enable/disable DDNS update for DHCP.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable DDNS update for DHCP.		
	<i>enable</i>	Enable DDNS update for DHCP.		
ddns-update-override	Enable/disable DDNS update override for DHCP.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable DDNS update override for DHCP.		
	<i>enable</i>	Enable DDNS update override for DHCP.		
ddns-zone	Zone of your domain name (ex. DDNS.com).	string	Maximum length: 64	
default-gateway	Default gateway IP address assigned by the DHCP server.	ipv4-address	Not Specified	0.0.0.0
dhcp-settings-from-fortipam	Enable/disable populating of DHCP server settings from FortiPAM.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable populating of DHCP server settings from FortiPAM.		
	<i>enable</i>	Enable populating of DHCP server settings from FortiPAM.		
dns-server1	DNS server 1.	ipv4-address	Not Specified	0.0.0.0
dns-server2	DNS server 2.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default								
dns-server3	DNS server 3.	ipv4-address	Not Specified	0.0.0.0								
dns-server4	DNS server 4.	ipv4-address	Not Specified	0.0.0.0								
dns-service	Options for assigning DNS servers to DHCP clients.	option	-	specify								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>local</td><td>IP address of the interface the DHCP server is added to becomes the client's DNS server IP address.</td></tr><tr><td>default</td><td>Clients are assigned the FortiGate's configured DNS servers.</td></tr><tr><td>specify</td><td>Specify up to 3 DNS servers in the DHCP server configuration.</td></tr></table>				Option	Description	local	IP address of the interface the DHCP server is added to becomes the client's DNS server IP address.	default	Clients are assigned the FortiGate's configured DNS servers.	specify	Specify up to 3 DNS servers in the DHCP server configuration.
Option	Description											
local	IP address of the interface the DHCP server is added to becomes the client's DNS server IP address.											
default	Clients are assigned the FortiGate's configured DNS servers.											
specify	Specify up to 3 DNS servers in the DHCP server configuration.											
domain	Domain name suffix for the IP addresses that the DHCP server assigns to clients.	string	Maximum length: 35									
filename	Name of the boot file on the TFTP server.	string	Maximum length: 127									
forticlient-on-net-status	Enable/disable FortiClient-On-Net service for this DHCP server.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable FortiClient On-Net Status.</td></tr><tr><td>enable</td><td>Enable FortiClient On-Net Status.</td></tr></table>				Option	Description	disable	Disable FortiClient On-Net Status.	enable	Enable FortiClient On-Net Status.		
Option	Description											
disable	Disable FortiClient On-Net Status.											
enable	Enable FortiClient On-Net Status.											
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
interface	DHCP server can assign IP configurations to clients connected to this interface.	string	Maximum length: 15									
ip-mode	Method used to assign client IP.	option	-	range								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>range</td><td>Use range defined by start-ip/end-ip to assign client IP.</td></tr><tr><td>usrgrp</td><td>Use user-group defined method to assign client IP.</td></tr></table>				Option	Description	range	Use range defined by start-ip/end-ip to assign client IP.	usrgrp	Use user-group defined method to assign client IP.		
Option	Description											
range	Use range defined by start-ip/end-ip to assign client IP.											
usrgrp	Use user-group defined method to assign client IP.											
ipsec-lease-hold	DHCP over IPsec leases expire this many seconds after tunnel down (0 to disable forced-expiry).	integer	Minimum value: 0 Maximum value: 8640000	60								

Parameter	Description	Type	Size	Default								
lease-time	Lease time in seconds, 0 means unlimited.	integer	Minimum value: 300 Maximum value: 8640000	604800								
mac-acl-default-action	MAC access control default action (allow or block assigning IP settings).	option	-	assign								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>assign</td><td>Allow the DHCP server to assign IP settings to clients on the MAC access control list.</td></tr><tr><td>block</td><td>Block the DHCP server from assigning IP settings to clients on the MAC access control list.</td></tr></table>	Option	Description	assign	Allow the DHCP server to assign IP settings to clients on the MAC access control list.	block	Block the DHCP server from assigning IP settings to clients on the MAC access control list.					
Option	Description											
assign	Allow the DHCP server to assign IP settings to clients on the MAC access control list.											
block	Block the DHCP server from assigning IP settings to clients on the MAC access control list.											
netmask	Netmask assigned by the DHCP server.	ipv4-netmask	Not Specified	0.0.0.0								
next-server	IP address of a server (for example, a TFTP sever) that DHCP clients can download a boot file from.	ipv4-address	Not Specified	0.0.0.0								
ntp-server1	NTP server 1.	ipv4-address	Not Specified	0.0.0.0								
ntp-server2	NTP server 2.	ipv4-address	Not Specified	0.0.0.0								
ntp-server3	NTP server 3.	ipv4-address	Not Specified	0.0.0.0								
ntp-service	Options for assigning Network Time Protocol (NTP) servers to DHCP clients.	option	-	specify								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>local</td><td>IP address of the interface the DHCP server is added to becomes the client's NTP server IP address.</td></tr><tr><td>default</td><td>Clients are assigned the FortiGate's configured NTP servers.</td></tr><tr><td>specify</td><td>Specify up to 3 NTP servers in the DHCP server configuration.</td></tr></table>	Option	Description	local	IP address of the interface the DHCP server is added to becomes the client's NTP server IP address.	default	Clients are assigned the FortiGate's configured NTP servers.	specify	Specify up to 3 NTP servers in the DHCP server configuration.			
Option	Description											
local	IP address of the interface the DHCP server is added to becomes the client's NTP server IP address.											
default	Clients are assigned the FortiGate's configured NTP servers.											
specify	Specify up to 3 NTP servers in the DHCP server configuration.											
server-type	DHCP server can be a normal DHCP server or an IPsec DHCP server.	option	-	regular								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>regular</td><td>Regular DHCP service.</td></tr><tr><td>ipsec</td><td>DHCP over IPsec service.</td></tr></table>	Option	Description	regular	Regular DHCP service.	ipsec	DHCP over IPsec service.					
Option	Description											
regular	Regular DHCP service.											
ipsec	DHCP over IPsec service.											
status	Enable/disable this DHCP configuration.	option	-	enable								

Parameter	Description	Type	Size	Default																																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not use this DHCP server configuration.</td></tr><tr><td><i>enable</i></td><td>Use this DHCP server configuration.</td></tr></table>	Option	Description	<i>disable</i>	Do not use this DHCP server configuration.	<i>enable</i>	Use this DHCP server configuration.																																									
	Option	Description																																														
	<i>disable</i>	Do not use this DHCP server configuration.																																														
<i>enable</i>	Use this DHCP server configuration.																																															
tftp-server <tftp-server>	One or more hostnames or IP addresses of the TFTP servers in quotes separated by spaces. TFTP server.	string	Maximum length: 63																																													
timezone	Select the time zone to be assigned to DHCP clients.	option	-	00																																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>01</td><td>(GMT-11:00) Midway Island, Samoa</td></tr><tr><td>02</td><td>(GMT-10:00) Hawaii</td></tr><tr><td>03</td><td>(GMT-9:00) Alaska</td></tr><tr><td>04</td><td>(GMT-8:00) Pacific Time (US &amp; Canada)</td></tr><tr><td>05</td><td>(GMT-7:00) Arizona</td></tr><tr><td>81</td><td>(GMT-7:00) Baja California Sur, Chihuahua</td></tr><tr><td>06</td><td>(GMT-7:00) Mountain Time (US &amp; Canada)</td></tr><tr><td>07</td><td>(GMT-6:00) Central America</td></tr><tr><td>08</td><td>(GMT-6:00) Central Time (US &amp; Canada)</td></tr><tr><td>09</td><td>(GMT-6:00) Mexico City</td></tr><tr><td>10</td><td>(GMT-6:00) Saskatchewan</td></tr><tr><td>11</td><td>(GMT-5:00) Bogota, Lima, Quito</td></tr><tr><td>12</td><td>(GMT-5:00) Eastern Time (US &amp; Canada)</td></tr><tr><td>13</td><td>(GMT-5:00) Indiana (East)</td></tr><tr><td>74</td><td>(GMT-4:00) Caracas</td></tr><tr><td>14</td><td>(GMT-4:00) Atlantic Time (Canada)</td></tr><tr><td>77</td><td>(GMT-4:00) Georgetown</td></tr><tr><td>15</td><td>(GMT-4:00) La Paz</td></tr><tr><td>87</td><td>(GMT-4:00) Paraguay</td></tr><tr><td>16</td><td>(GMT-3:00) Santiago</td></tr><tr><td>17</td><td>(GMT-3:30) Newfoundland</td></tr></table>	Option	Description	01	(GMT-11:00) Midway Island, Samoa	02	(GMT-10:00) Hawaii	03	(GMT-9:00) Alaska	04	(GMT-8:00) Pacific Time (US & Canada)	05	(GMT-7:00) Arizona	81	(GMT-7:00) Baja California Sur, Chihuahua	06	(GMT-7:00) Mountain Time (US & Canada)	07	(GMT-6:00) Central America	08	(GMT-6:00) Central Time (US & Canada)	09	(GMT-6:00) Mexico City	10	(GMT-6:00) Saskatchewan	11	(GMT-5:00) Bogota, Lima, Quito	12	(GMT-5:00) Eastern Time (US & Canada)	13	(GMT-5:00) Indiana (East)	74	(GMT-4:00) Caracas	14	(GMT-4:00) Atlantic Time (Canada)	77	(GMT-4:00) Georgetown	15	(GMT-4:00) La Paz	87	(GMT-4:00) Paraguay	16	(GMT-3:00) Santiago	17	(GMT-3:30) Newfoundland

## config system dns-database

Parameter	Description	Type	Size	Default
allow-transfer	DNS zone transfer IP address list.	user	Not Specified	
authoritative	Enable/disable authoritative zone.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable authoritative zone.		
	<i>disable</i>	Disable authoritative zone.		
contact	Email address of the administrator for this zone. You can specify only the username, such as admin or the full email address, such as admin@test.com When using only a username, the domain of the email will be this zone.	string	Maximum length: 255	host
domain	Domain name.	string	Maximum length: 255	

Parameter	Description	Type	Size	Default								
forwarder	DNS zone forwarder IP address list.	user	Not Specified									
ip-primary	IP address of primary DNS server. Entries in this primary DNS server and imported into the DNS zone.	ipv4-address-any	Not Specified	0.0.0.0								
name	Zone name.	string	Maximum length: 35									
primary-name	Domain name of the default DNS server for this zone.	string	Maximum length: 255	dns								
rr-max	Maximum number of resource records.	integer	Minimum value: 10 Maximum value: 65536	16384								
source-ip	Source IP for forwarding to DNS server.	ipv4-address	Not Specified	0.0.0.0								
status	Enable/disable this DNS zone.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.		
	Option	Description										
	enable	Enable setting.										
disable	Disable setting.											
ttl	Default time-to-live value for the entries of this DNS zone.	integer	Minimum value: 0 Maximum value: 2147483647	86400								
type	Zone type (primary to manage entries directly, secondary to import entries from other zones).	option	-	primary								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>primary</td><td>Primary DNS zone, to manage entries directly.</td></tr><tr><td>secondary</td><td>Secondary DNS zone, to import entries from other DNS zones.</td></tr></table>				Option	Description	primary	Primary DNS zone, to manage entries directly.	secondary	Secondary DNS zone, to import entries from other DNS zones.		
	Option	Description										
	primary	Primary DNS zone, to manage entries directly.										
secondary	Secondary DNS zone, to import entries from other DNS zones.											
view	Zone view (public to serve public clients, shadow to serve internal clients).	option	-	shadow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>shadow</td><td>Shadow DNS zone to serve internal clients.</td></tr><tr><td>public</td><td>Public DNS zone to serve public clients.</td></tr><tr><td>shadow-ztna</td><td>implicit DNS zone for ztna dox tunnel.</td></tr></table>				Option	Description	shadow	Shadow DNS zone to serve internal clients.	public	Public DNS zone to serve public clients.	shadow-ztna	implicit DNS zone for ztna dox tunnel.
	Option	Description										
	shadow	Shadow DNS zone to serve internal clients.										
	public	Public DNS zone to serve public clients.										
shadow-ztna	implicit DNS zone for ztna dox tunnel.

## config system dns

Parameter	Description	Type	Size	Default						
alt-primary	Alternate primary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0						
alt-secondary	Alternate secondary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0						
cache-notfound-responses	Enable/disable response from the DNS server when a record is not in cache.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable cache NOTFOUND responses from DNS server.</td></tr><tr><td>enable</td><td>Enable cache NOTFOUND responses from DNS server.</td></tr></table>				Option	Description	disable	Disable cache NOTFOUND responses from DNS server.	enable	Enable cache NOTFOUND responses from DNS server.
	Option	Description								
	disable	Disable cache NOTFOUND responses from DNS server.								
enable	Enable cache NOTFOUND responses from DNS server.									
dns-cache-limit	Maximum number of records in the DNS cache.	integer	Minimum value: 0 Maximum value: 4294967295	5000						

Parameter	Description	Type	Size	Default								
dns-cache-ttl	Duration in seconds that the DNS cache retains information.	integer	Minimum value: 60 Maximum value: 86400	1800								
domain <domain>	Search suffix list for hostname lookup. DNS search domain list separated by space (maximum 8 domains).	string	Maximum length: 127									
fqdn-cache-ttl	FQDN cache time to live in seconds.	integer	Minimum value: 0 Maximum value: 86400	0								
fqdn-min-refresh	FQDN cache minimum refresh time in seconds.	integer	Minimum value: 10 Maximum value: 3600	60								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.
Option	Description											
auto	Set outgoing interface automatically.											
sdwan	Set outgoing interface by SD-WAN or policy routing rules.											
specify	Set outgoing interface manually.											
ip6-primary	Primary DNS server IPv6 address.	ipv6-address	Not Specified	::								
ip6-secondary	Secondary DNS server IPv6 address.	ipv6-address	Not Specified	::								
log	Local DNS log setting.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable.</td></tr><tr><td>error</td><td>Enable local DNS error log.</td></tr><tr><td>all</td><td>Enable local DNS log.</td></tr></table>				Option	Description	disable	Disable.	error	Enable local DNS error log.	all	Enable local DNS log.
Option	Description											
disable	Disable.											
error	Enable local DNS error log.											
all	Enable local DNS log.											
primary	Primary DNS server IP address.	ipv4-address	Not Specified	0.0.0.0								
protocol	DNS transport protocols.	option	-	cleartext								

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>cleartext</i></td><td>DNS over UDP/53, DNS over TCP/53.</td></tr><tr><td><i>dot</i></td><td>DNS over TLS/853.</td></tr><tr><td><i>doh</i></td><td>DNS over HTTPS/443.</td></tr></table>	Option	Description	<i>cleartext</i>	DNS over UDP/53, DNS over TCP/53.	<i>dot</i>	DNS over TLS/853.	<i>doh</i>	DNS over HTTPS/443.			
	Option	Description										
	<i>cleartext</i>	DNS over UDP/53, DNS over TCP/53.										
	<i>dot</i>	DNS over TLS/853.										
<i>doh</i>	DNS over HTTPS/443.											
retry	Number of times to retry.	integer	Minimum value: 0 Maximum value: 5	2								
secondary	Secondary DNS server IP address.	ipv4-address	Not Specified	0.0.0.0								
server-hostname <hostname>	DNS server host name list. DNS server host name list separated by space (maximum 4 domains).	string	Maximum length: 127									
server-select-method	Specify how configured servers are prioritized.	option	-	least-rtt								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>least-rtt</i></td><td>Select servers based on least round trip time.</td></tr><tr><td><i>failover</i></td><td>Select servers based on the order they are configured.</td></tr></table>	Option	Description	<i>least-rtt</i>	Select servers based on least round trip time.	<i>failover</i>	Select servers based on the order they are configured.					
	Option	Description										
	<i>least-rtt</i>	Select servers based on least round trip time.										
<i>failover</i>	Select servers based on the order they are configured.											
source-ip	IP address used by the DNS server as its source IP.	ipv4-address	Not Specified	0.0.0.0								
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_Factory								
timeout	DNS query timeout interval in seconds.	integer	Minimum value: 1 Maximum value: 10	5

## config system email-server

Configure the email server used by the FortiGate various things. For example, for sending email messages to users to support user authentication features.

```
config system email-server
```

Description: Configure the email server used by the FortiGate various things. For example, for sending email messages to users to support user authentication features.

```
set authenticate [enable|disable]
set interface {string}
set interface-select-method [auto|sdwan|...]
set password {password}
set port {integer}
set reply-to {string}
set security [none|starttls|...]
set server {string}
set source-ip {ipv4-address}
set source-ip6 {ipv6-address}
```

```

set ssl-min-proto-version [default|SSLv3|...]
set type {option}
set username {string}
set validate-server [enable|disable]
end

```

## config system email-server

Parameter	Description	Type	Size	Default
authenticate	Enable/disable authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable authentication.		
	<i>disable</i>	Disable authentication.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
password	SMTP server user password for authentication.	password	Not Specified	
port	SMTP server port.	integer	Minimum value: 1 Maximum value: 65535	25
reply-to	Reply-To email address.	string	Maximum length: 63	
security	Connection security used by the email server.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	None.		
	<i>starttls</i>	STARTTLS.		
	<i>smtps</i>	SSL/TLS.		

Parameter	Description	Type	Size	Default
server	SMTP server IP address or hostname.	string	Maximum length: 63	
source-ip	SMTP server IPv4 source IP.	ipv4-address	Not Specified	0.0.0.0
source-ip6	SMTP server IPv6 source IP.	ipv6-address	Not Specified	::
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections.	option	-	default
	<div><div>Option</div><div>Description</div></div>			
	defaultFollow system global setting.			
	SSLv3SSLv3.			
	TLSv1TLSv1.			
	TLSv1-1TLSv1.1.			
	TLSv1-2TLSv1.2.			
type	Use FortiGuard Message service or custom email server.	option	-	custom
	<div><div>Option</div><div>Description</div></div>			
	customUse custom email server.			
username	SMTP server user name for authentication.	string	Maximum length: 63	
validate-server	Enable/disable validation of server certificate.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	enableEnable validation of server certificate.			
	disableDisable validation of server certificate.			

## config system external-resource

Configure external resource.

```

config system external-resource
    Description: Configure external resource.
    edit <name>
        set category {integer}
        set comments {var-string}
        set interface {string}
        set interface-select-method [auto|sdwan|...]
        set password {password}
    
```

```

        set refresh-rate {integer}
        set resource {string}
        set server-identity-check [none|basic|...]
        set source-ip {ipv4-address}
        set status [enable|disable]
        set type [category|address|...]
        set update-method [feed|push]
        set user-agent {var-string}
        set username {string}
        set uuid {uuid}
    next
end

```

## config system external-resource

Parameter	Description	Type	Size	Default								
category	User resource category.	integer	Minimum value: 192 Maximum value: 221	0								
comments	Comment.	var-string	Maximum length: 255									
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
name	External resource name.	string	Maximum length: 35									
password	HTTP basic authentication password.	password	Not Specified									
refresh-rate	Time interval to refresh external resource.	integer	Minimum value: 1 Maximum value: 43200	5								
resource	URI of external resource.	string	Maximum length: 511									

Parameter	Description	Type	Size	Default										
server-identity-check	Certificate verification option.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No certificate verification.</td></tr><tr><td><i>basic</i></td><td>Check server certificate only.</td></tr><tr><td><i>full</i></td><td>Check server certificate and verify the domain matches in the server certificate.</td></tr></table>	Option	Description	<i>none</i>	No certificate verification.	<i>basic</i>	Check server certificate only.	<i>full</i>	Check server certificate and verify the domain matches in the server certificate.					
Option	Description													
<i>none</i>	No certificate verification.													
<i>basic</i>	Check server certificate only.													
<i>full</i>	Check server certificate and verify the domain matches in the server certificate.													
source-ip	Source IPv4 address used to communicate with server.	ipv4-address	Not Specified	0.0.0.0										
status	Enable/disable user resource.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable user resource.</td></tr><tr><td><i>disable</i></td><td>Disable user resource.</td></tr></table>	Option	Description	<i>enable</i>	Enable user resource.	<i>disable</i>	Disable user resource.							
Option	Description													
<i>enable</i>	Enable user resource.													
<i>disable</i>	Disable user resource.													
type	User resource type.	option	-	category										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>category</i></td><td>FortiGuard category.</td></tr><tr><td><i>address</i></td><td>Firewall IP address.</td></tr><tr><td><i>domain</i></td><td>Domain Name.</td></tr><tr><td><i>malware</i></td><td>Malware hash.</td></tr></table>	Option	Description	<i>category</i>	FortiGuard category.	<i>address</i>	Firewall IP address.	<i>domain</i>	Domain Name.	<i>malware</i>	Malware hash.			
Option	Description													
<i>category</i>	FortiGuard category.													
<i>address</i>	Firewall IP address.													
<i>domain</i>	Domain Name.													
<i>malware</i>	Malware hash.													
update-method	External resource update method.	option	-	feed										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>feed</i></td><td>FortiGate unit will pull update from the external resource.</td></tr><tr><td><i>push</i></td><td>External Resource update is pushed to the FortiGate unit through the FortiGate unit's RESTAPI/CLI.</td></tr></table>	Option	Description	<i>feed</i>	FortiGate unit will pull update from the external resource.	<i>push</i>	External Resource update is pushed to the FortiGate unit through the FortiGate unit's RESTAPI/CLI.							
Option	Description													
<i>feed</i>	FortiGate unit will pull update from the external resource.													
<i>push</i>	External Resource update is pushed to the FortiGate unit through the FortiGate unit's RESTAPI/CLI.													
user-agent	HTTP User-Agent header.	var-string	Maximum length: 255											
username	HTTP basic authentication user name.	string	Maximum length: 64											
uuid	Universally Unique Identifier (UUID; automatically assigned but can be manually reset).	uuid	Not Specified	00000000-0000-0000-0000-000000000000

  set vpn-role [hub|spoke]
end
```

## config system fabric-vpn

Parameter	Description	Type	Size	Default								
bgp-as	BGP Router AS number, valid from 1 to 4294967295.	integer	Minimum value: 0 Maximum value: 4294967295	0								
branch-name	Branch name.	string	Maximum length: 35									
health-checks	Underlying health checks.	string	Maximum length: 35									
loopback-address-block	IPv4 address and subnet mask for hub's loopback address, syntax: X.X.X.X/24.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0								
loopback-advertised-subnet	Loopback advertised subnet reference.	integer	Minimum value: 0 Maximum value: 4294967295	0								
loopback-interface	Loopback interface.	string	Maximum length: 15									
policy-rule	Policy creation rule.	option	-	health-check								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>health-check</i></td><td>Create health check policy automatically.</td></tr><tr><td><i>manual</i></td><td>All policies will be created manually.</td></tr><tr><td><i>auto</i></td><td>Automatically create allow policies.</td></tr></table>				Option	Description	<i>health-check</i>	Create health check policy automatically.	<i>manual</i>	All policies will be created manually.	<i>auto</i>	Automatically create allow policies.
Option	Description											
<i>health-check</i>	Create health check policy automatically.											
<i>manual</i>	All policies will be created manually.											
<i>auto</i>	Automatically create allow policies.											
psksecret	Pre-shared secret for ADVPN.	password-3	Not Specified									
sdwan-zone	Reference to created SD-WAN zone.	string	Maximum length: 35									
status	Enable/disable Fabric VPN.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Fabric VPN.</td></tr><tr><td><i>disable</i></td><td>Disable Fabric VPN.</td></tr></table>				Option	Description	<i>enable</i>	Enable Fabric VPN.	<i>disable</i>	Disable Fabric VPN.		
Option	Description											
<i>enable</i>	Enable Fabric VPN.											
<i>disable</i>	Disable Fabric VPN.											
sync-mode	Setting synchronised by fabric or manual.	option	-	enable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable fabric led configuration synchronisation.		
	<i>disable</i>	Disable fabric led configuration synchronisation.		
vpn-role	Fabric VPN role.	option	-	hub
	<b>Option</b>	<b>Description</b>		
	<i>hub</i>	VPN hub.		
	<i>spoke</i>	VPN spoke.		

### config advertised-subnets

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967294	0
prefix	Network prefix.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
access	Access policy direction.	option	-	inbound
	<b>Option</b>	<b>Description</b>		
	<i>inbound</i>	Allow inbound traffic to subnet.		
	<i>bidirectional</i>	Allow inbound and outbound traffic to subnet.		
bgp-network	Underlying BGP network.	integer	Minimum value: 0 Maximum value: 4294967295	0
firewall-address	Underlying firewall address.	string	Maximum length: 79	
policies	Underlying policies.	integer	Minimum value: 0 Maximum value: 4294967295	

## config overlays

Parameter	Description	Type	Size	Default
name	Overlay name.	string	Maximum length: 79	
overlay-tunnel-block	IPv4 address and subnet mask for the overlay tunnel , syntax: X.X.X.X/24.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0
remote-gw	IP address of the hub gateway (Set by hub).	ipv4-address-any	Not Specified	0.0.0.0
interface	Underlying interface name.	string	Maximum length: 15	
bgp-neighbor	Underlying BGP neighbor entry.	string	Maximum length: 45	
overlay-policy	The overlay policy to allow ADVPN thru traffic.	integer	Minimum value: 0 Maximum value: 4294967295	0
bgp-network	Underlying BGP network.	integer	Minimum value: 0 Maximum value: 4294967295	0
route-policy	Underlying router policy.	integer	Minimum value: 0 Maximum value: 4294967295	0
bgp-neighbor-group	Underlying BGP neighbor group entry.	string	Maximum length: 45	
bgp-neighbor-range	Underlying BGP neighbor range entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
ipsec-phase1	IPsec interface.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
sdwan-member	Reference to SD-WAN member entry.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config system federated-upgrade

Coordinate federated upgrades within the Security Fabric.

```

config system federated-upgrade
    Description: Coordinate federated upgrades within the Security Fabric.
    set failure-device {string}
    set failure-reason [none|internal|...]
    set ha-reboot-controller {string}
    set next-path-index {integer}
    config node-list

	Option	Description																												
	<i>disabled</i>	No federated upgrade has been configured.																												
	<i>initialized</i>	The upgrade has been configured.																												
	<i>downloading</i>	The image is downloading in preparation for the upgrade.																												
<i>device-disconnected</i>	The image downloads are complete, but one or more devices have disconnected.																													

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>ready</i>	The image download finished and the upgrade is pending.		
	<i>coordinating</i>	The upgrade is coordinating with other running upgrades.		
	<i>staging</i>	The upgrade is confirmed and images are being staged.		
	<i>final-check</i>	The upgrade is ready and final checks are in progress.		
	<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.		
	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.		
	<i>confirmed</i>	The upgrade was confirmed and reboots are running.		
	<i>done</i>	The upgrade completed successfully.		
<i>failed</i>	The upgrade failed due to a local issue.			
upgrade-id	Unique identifier for this upgrade.	integer	Minimum value: 0 Maximum value: 4294967295	0

### config node-list

Parameter	Description	Type	Size	Default						
serial	Serial number of the node to include.	string	Maximum length: 79							
timing	Run immediately or at a scheduled time.	option	-	immediate						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>immediate</i></td><td>Begin the upgrade immediately.</td></tr><tr><td><i>scheduled</i></td><td>Begin the upgrade at a configured time.</td></tr></table>				Option	Description	<i>immediate</i>	Begin the upgrade immediately.	<i>scheduled</i>	Begin the upgrade at a configured time.
Option	Description									
<i>immediate</i>	Begin the upgrade immediately.									
<i>scheduled</i>	Begin the upgrade at a configured time.									
maximum-minutes	Maximum number of minutes to allow for immediate upgrade preparation.	integer	Minimum value: 5 Maximum value: 10080	15						
time	Scheduled upgrade execution time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified							
setup-time	Upgrade preparation start time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified							

Parameter	Description	Type	Size	Default										
upgrade-path	Fortinet OS image versions to upgrade through in major-minor-patch format, such as 7-0-4.	user	Not Specified											
device-type	Fortinet device type.	option	-	fortigate										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortigate</i></td><td>This device is a FortiGate.</td></tr><tr><td><i>fortiswitch</i></td><td>This device is a FortiSwitch.</td></tr><tr><td><i>fortiap</i></td><td>This device is a FortiAP.</td></tr><tr><td><i>fortiextender</i></td><td>This device is a FortiExtender.</td></tr></table>				Option	Description	<i>fortigate</i>	This device is a FortiGate.	<i>fortiswitch</i>	This device is a FortiSwitch.	<i>fortiap</i>	This device is a FortiAP.	<i>fortiextender</i>	This device is a FortiExtender.
	Option	Description												
	<i>fortigate</i>	This device is a FortiGate.												
	<i>fortiswitch</i>	This device is a FortiSwitch.												
	<i>fortiap</i>	This device is a FortiAP.												
<i>fortiextender</i>	This device is a FortiExtender.													
coordinating-fortigate	Serial number of the FortiGate unit that controls this device.	string	Maximum length: 79											

## config system fips-cc

Configure FIPS-CC mode.

```
config system fips-cc
    Description: Configure FIPS-CC mode.
    set key-generation-self-test [enable|disable]
    set self-test-period {integer}
    set status [enable|disable]
end
```

## config system fips-cc

Parameter	Description	Type	Size	Default						
key-generation-self-test	Enable/disable self tests after key generation.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable self tests after key generation.</td></tr><tr><td><i>disable</i></td><td>Disable self tests after key generation.</td></tr></table>				Option	Description	<i>enable</i>	Enable self tests after key generation.	<i>disable</i>	Disable self tests after key generation.
Option	Description									
<i>enable</i>	Enable self tests after key generation.									
<i>disable</i>	Disable self tests after key generation.									
self-test-period	Self test period.	integer	Minimum value: 1 Maximum value: 1440	1440						
status	Enable/disable ciphers for FIPS mode of operation.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FIPS-CC mode.		
	<i>disable</i>	Disable FIPS-CC mode.

end

## config system fortiguard

Parameter	Description	Type	Size	Default						
antispam-cache	Enable/disable FortiGuard antispam request caching. Uses a small amount of memory but improves performance.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGuard antispam request caching.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGuard antispam request caching.</td></tr></table>				Option	Description	<i>enable</i>	Enable FortiGuard antispam request caching.	<i>disable</i>	Disable FortiGuard antispam request caching.
Option	Description									
<i>enable</i>	Enable FortiGuard antispam request caching.									
<i>disable</i>	Disable FortiGuard antispam request caching.									
antispam-cache-mpercent	Maximum percentage of FortiGate memory the antispam cache is allowed to use.	integer	Minimum value: 1 Maximum value: 15	2						
antispam-cache-ttl	Time-to-live for antispam cache entries in seconds. Lower times reduce the cache size. Higher times may improve performance since the cache will have more entries.	integer	Minimum value: 300 Maximum value: 86400	1800						
antispam-expiration	Expiration date of the FortiGuard antispam contract.	integer	Minimum value: 0 Maximum value: 4294967295	0						

Parameter	Description	Type	Size	Default						
antispam-force-off	Enable/disable turning off the FortiGuard antispam service.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Turn off the FortiGuard antispam service.</td></tr><tr><td><i>disable</i></td><td>Allow the FortiGuard antispam service.</td></tr></table>				Option	Description	<i>enable</i>	Turn off the FortiGuard antispam service.	<i>disable</i>	Allow the FortiGuard antispam service.
	Option	Description								
	<i>enable</i>	Turn off the FortiGuard antispam service.								
<i>disable</i>	Allow the FortiGuard antispam service.									
antispam-license	Interval of time between license checks for the FortiGuard antispam contract.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295						
antispam-timeout	Antispam query time out.	integer	Minimum value: 1 Maximum value: 30	7						
anycast-sdns-server-ip	IP address of the FortiGuard anycast DNS rating server.	ipv4-address	Not Specified	0.0.0.0						
anycast-sdns-server-port	Port to connect to on the FortiGuard anycast DNS rating server.	integer	Minimum value: 1 Maximum value: 65535	853						
auto-firmware-upgrade	Enable/disable automatic patch-level firmware upgrade from FortiGuard. The FortiGate unit searches for new patches only in the same major and minor version.	option	-	disable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic patch-level firmware upgrade to latest version from FortiGuard.</td></tr><tr><td><i>disable</i></td><td>Disable automatic patch-level firmware upgrade to latest version from FortiGuard.</td></tr></table>				Option	Description	<i>enable</i>	Enable automatic patch-level firmware upgrade to latest version from FortiGuard.	<i>disable</i>	Disable automatic patch-level firmware upgrade to latest version from FortiGuard.
	Option	Description								
	<i>enable</i>	Enable automatic patch-level firmware upgrade to latest version from FortiGuard.								
<i>disable</i>	Disable automatic patch-level firmware upgrade to latest version from FortiGuard.									
auto-firmware-upgrade-day	Allowed day. Disallow any day of the week to use auto-firmware-upgrade-delay instead, which waits for designated days before installing an automatic patch-level firmware upgrade.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sunday</i></td><td>Sunday.</td></tr><tr><td><i>monday</i></td><td>Monday.</td></tr></table>				Option	Description	<i>sunday</i>	Sunday.	<i>monday</i>	Monday.
	Option	Description								
	<i>sunday</i>	Sunday.								
<i>monday</i>	Monday.									

Parameter	Description	Type	Size	Default													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tuesday</i></td><td>Tuesday.</td></tr><tr><td><i>wednesday</i></td><td>Wednesday.</td></tr><tr><td><i>thursday</i></td><td>Thursday.</td></tr><tr><td><i>friday</i></td><td>Friday.</td></tr><tr><td><i>saturday</i></td><td>Saturday.</td></tr></table>		Option	Description	<i>tuesday</i>	Tuesday.	<i>wednesday</i>	Wednesday.	<i>thursday</i>	Thursday.	<i>friday</i>	Friday.	<i>saturday</i>	Saturday.			
	Option	Description															
	<i>tuesday</i>	Tuesday.															
	<i>wednesday</i>	Wednesday.															
	<i>thursday</i>	Thursday.															
	<i>friday</i>	Friday.															
<i>saturday</i>	Saturday.																
auto-firmware-upgrade-delay	Delay of day of the week for installing an automatic patch-level firmware upgrade.	integer	Minimum value: 0 Maximum value: 14	3													
auto-firmware-upgrade-end-hour	End time in the designated time window for automatic patch-level firmware upgrade from FortiGuard in 24 hour time. When the end time is smaller than the start time, the end time is interpreted as the next day. The actual upgrade time is selected randomly within the time window.	integer	Minimum value: 0 Maximum value: 23	4													
auto-firmware-upgrade-start-hour	Start time in the designated time window for automatic patch-level firmware upgrade from FortiGuard in 24 hour time. The actual upgrade time is selected randomly within the time window.	integer	Minimum value: 0 Maximum value: 23	2													
auto-join-forticloud *	Automatically connect to and login to FortiCloud.	option	-	enable													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic connection and login to FortiCloud.</td></tr><tr><td><i>disable</i></td><td>Disable automatic connection and login to FortiCloud.</td></tr></table>		Option	Description	<i>enable</i>	Enable automatic connection and login to FortiCloud.	<i>disable</i>	Disable automatic connection and login to FortiCloud.									
	Option	Description															
	<i>enable</i>	Enable automatic connection and login to FortiCloud.															
<i>disable</i>	Disable automatic connection and login to FortiCloud.																
ddns-server-ip	IP address of the FortiDDNS server.	ipv4-address	Not Specified	0.0.0.0													
ddns-server-ip6	IPv6 address of the FortiDDNS server.	ipv6-address	Not Specified	::													
ddns-server-port	Port used to communicate with FortiDDNS servers.	integer	Minimum value: 1 Maximum value: 65535	443													
fortiguard-anycast	Enable/disable use of FortiGuard's Anycast network.	option	-	enable													

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of FortiGuard's Anycast network.</td></tr><tr><td><i>disable</i></td><td>Disable use of FortiGuard's Anycast network.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of FortiGuard's Anycast network.	<i>disable</i>	Disable use of FortiGuard's Anycast network.					
	Option	Description										
	<i>enable</i>	Enable use of FortiGuard's Anycast network.										
<i>disable</i>	Disable use of FortiGuard's Anycast network.											
fortiguard-anycast-source	Configure which of Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network. Default is Fortinet.	option	-	fortinet								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortinet</i></td><td>Use Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network.</td></tr><tr><td><i>aws</i></td><td>Use Fortinet's AWS servers to provide FortiGuard services in FortiGuard's anycast network.</td></tr><tr><td><i>debug</i></td><td>Use Fortinet's internal test servers to provide FortiGuard services in FortiGuard's anycast network.</td></tr></table>	Option	Description	<i>fortinet</i>	Use Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network.	<i>aws</i>	Use Fortinet's AWS servers to provide FortiGuard services in FortiGuard's anycast network.	<i>debug</i>	Use Fortinet's internal test servers to provide FortiGuard services in FortiGuard's anycast network.			
	Option	Description										
	<i>fortinet</i>	Use Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network.										
	<i>aws</i>	Use Fortinet's AWS servers to provide FortiGuard services in FortiGuard's anycast network.										
<i>debug</i>	Use Fortinet's internal test servers to provide FortiGuard services in FortiGuard's anycast network.											
gui-prompt-auto-upgrade	Enable/disable prompting of automatic patch-level firmware upgrade recommendation.	option	-	disable **								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable prompting of automatic patch-level firmware upgrade recommendation.</td></tr><tr><td><i>disable</i></td><td>Disable prompting of automatic patch-level firmware upgrade recommendation.</td></tr></table>	Option	Description	<i>enable</i>	Enable prompting of automatic patch-level firmware upgrade recommendation.	<i>disable</i>	Disable prompting of automatic patch-level firmware upgrade recommendation.					
	Option	Description										
	<i>enable</i>	Enable prompting of automatic patch-level firmware upgrade recommendation.										
<i>disable</i>	Disable prompting of automatic patch-level firmware upgrade recommendation.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.			
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
load-balance-servers	Number of servers to alternate between as first FortiGuard option.	integer	Minimum value: 1 Maximum value: 266	1								

Parameter	Description	Type	Size	Default
outbreak-prevention-cache	Enable/disable FortiGuard Virus Outbreak Prevention cache.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FortiGuard antivirus caching.		
	<i>disable</i>	Disable FortiGuard antivirus caching.		
outbreak-prevention-cache-mpercent	Maximum percent of memory FortiGuard Virus Outbreak Prevention cache can use.	integer	Minimum value: 1 Maximum value: 15	2
outbreak-prevention-cache-ttl	Time-to-live for FortiGuard Virus Outbreak Prevention cache entries.	integer	Minimum value: 300 Maximum value: 86400	300
outbreak-prevention-expiration	Expiration date of FortiGuard Virus Outbreak Prevention contract.	integer	Minimum value: 0 Maximum value: 4294967295	0
outbreak-prevention-force-off	Turn off FortiGuard Virus Outbreak Prevention service.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Turn off FortiGuard antivirus service.		
	<i>disable</i>	Allow the FortiGuard antivirus service.		
outbreak-prevention-license	Interval of time between license checks for FortiGuard Virus Outbreak Prevention contract.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295
outbreak-prevention-timeout	FortiGuard Virus Outbreak Prevention time out.	integer	Minimum value: 1 Maximum value: 30	7
persistent-connection	Enable/disable use of persistent connection to receive update notification from FortiGuard.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable persistent connection to receive update notification from FortiGuard.		
	<i>disable</i>	Disable persistent connection to receive update notification from FortiGuard.		
port	Port used to communicate with the FortiGuard servers.	option	-	443
	<b>Option</b>	<b>Description</b>		
	<i>8888</i>	port 8888 for server communication.		
	<i>53</i>	port 53 for server communication.		
	<i>80</i>	port 80 for server communication.		
	<i>443</i>	port 443 for server communication.		
protocol	Protocol used to communicate with the FortiGuard servers.	option	-	https
	<b>Option</b>	<b>Description</b>		
	<i>udp</i>	UDP for server communication (for use by FortiGuard or FortiManager).		
	<i>http</i>	HTTP for server communication (for use only by FortiManager).		
	<i>https</i>	HTTPS for server communication (for use by FortiGuard or FortiManager).		
proxy-password	Proxy user password.	password	Not Specified	
proxy-server-ip	Hostname or IP address of the proxy server.	string	Maximum length: 63	
proxy-server-port	Port used to communicate with the proxy server.	integer	Minimum value: 0 Maximum value: 65535	0
proxy-username	Proxy user name.	string	Maximum length: 64	
sandbox-inline-scan	Enable/disable FortiCloud Sandbox inline-scan.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FortiCloud Sandbox inline scan.		
	<i>disable</i>	Disable FortiCloud Sandbox inline scan.		

Parameter	Description	Type	Size	Default						
sandbox-region	FortiCloud Sandbox region.	string	Maximum length: 63							
sdns-options	Customization options for the FortiGuard DNS service.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>include-question-section</i></td><td>Include DNS question section in the FortiGuard DNS setup message.</td></tr></table>				Option	Description	<i>include-question-section</i>	Include DNS question section in the FortiGuard DNS setup message.		
Option	Description									
<i>include-question-section</i>	Include DNS question section in the FortiGuard DNS setup message.									
sdns-server-ip	IP address of the FortiGuard DNS rating server.	user	Not Specified							
sdns-server-port	Port to connect to on the FortiGuard DNS rating server.	integer	Minimum value: 1 Maximum value: 65535	53						
service-account-id	Service account ID.	string	Maximum length: 50							
source-ip	Source IPv4 address used to communicate with FortiGuard.	ipv4-address	Not Specified	0.0.0.0						
source-ip6	Source IPv6 address used to communicate with FortiGuard.	ipv6-address	Not Specified	::						
update-build-proxy	Enable/disable proxy dictionary rebuild.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable proxy dictionary rebuild.</td></tr><tr><td><i>disable</i></td><td>Disable proxy dictionary rebuild.</td></tr></table>				Option	Description	<i>enable</i>	Enable proxy dictionary rebuild.	<i>disable</i>	Disable proxy dictionary rebuild.
Option	Description									
<i>enable</i>	Enable proxy dictionary rebuild.									
<i>disable</i>	Disable proxy dictionary rebuild.									
update-extdb	Enable/disable external resource update.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable external resource update.</td></tr><tr><td><i>disable</i></td><td>Disable external resource update.</td></tr></table>				Option	Description	<i>enable</i>	Enable external resource update.	<i>disable</i>	Disable external resource update.
Option	Description									
<i>enable</i>	Enable external resource update.									
<i>disable</i>	Disable external resource update.									
update-ffdb	Enable/disable Internet Service Database update.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Internet Service Database update.</td></tr><tr><td><i>disable</i></td><td>Disable Internet Service Database update.</td></tr></table>				Option	Description	<i>enable</i>	Enable Internet Service Database update.	<i>disable</i>	Disable Internet Service Database update.
Option	Description									
<i>enable</i>	Enable Internet Service Database update.									
<i>disable</i>	Disable Internet Service Database update.									

Parameter	Description	Type	Size	Default								
update-server-location	Location from which to receive FortiGuard updates.	option	-	automatic								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>automatic</i></td><td>FortiGuard servers chosen based on closest proximity to FortiGate unit.</td></tr><tr><td><i>usa</i></td><td>FortiGuard servers in United States.</td></tr><tr><td><i>eu</i></td><td>FortiGuard servers in the European Union.</td></tr></table>	Option	Description	<i>automatic</i>	FortiGuard servers chosen based on closest proximity to FortiGate unit.	<i>usa</i>	FortiGuard servers in United States.	<i>eu</i>	FortiGuard servers in the European Union.			
Option	Description											
<i>automatic</i>	FortiGuard servers chosen based on closest proximity to FortiGate unit.											
<i>usa</i>	FortiGuard servers in United States.											
<i>eu</i>	FortiGuard servers in the European Union.											
update-uwdb	Enable/disable allowlist update.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allowlist update.</td></tr><tr><td><i>disable</i></td><td>Disable allowlist update.</td></tr></table>	Option	Description	<i>enable</i>	Enable allowlist update.	<i>disable</i>	Disable allowlist update.					
Option	Description											
<i>enable</i>	Enable allowlist update.											
<i>disable</i>	Disable allowlist update.											
vdom	FortiGuard Service virtual domain name.	string	Maximum length: 31									
videofilter-expiration	Expiration date of the FortiGuard video filter contract.	integer	Minimum value: 0 Maximum value: 4294967295	0								
videofilter-license	Interval of time between license checks for the FortiGuard video filter contract.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295								
webfilter-cache	Enable/disable FortiGuard web filter caching.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGuard web filter caching.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGuard web filter caching.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiGuard web filter caching.	<i>disable</i>	Disable FortiGuard web filter caching.					
Option	Description											
<i>enable</i>	Enable FortiGuard web filter caching.											
<i>disable</i>	Disable FortiGuard web filter caching.											
webfilter-cache-ttl	Time-to-live for web filter cache entries in seconds.	integer	Minimum value: 300 Maximum value: 86400	3600								

Parameter	Description	Type	Size	Default
webfilter-expiration	Expiration date of the FortiGuard web filter contract.	integer	Minimum value: 0 Maximum value: 4294967295	0
webfilter-force-off	Enable/disable turning off the FortiGuard web filtering service.	option	-	disable
	Option	Description		
	enable	Turn off the FortiGuard web filtering service.		
	disable	Allow the FortiGuard web filtering service to operate.		
webfilter-license	Interval of time between license checks for the FortiGuard web filter contract.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295
webfilter-timeout	Web filter query time out.	integer	Minimum value: 1 Maximum value: 30	15

\* This parameter may not exist in some models.

\*\* Values may differ between models.

## config system fortindr

Configure FortiNDR.

```
config system fortindr
  Description: Configure FortiNDR.
  set interface {string}
  set interface-select-method [auto|sdwan|...]
  set source-ip {string}
  set status [disable|enable]
end
```

## config system fortindr

Parameter	Description	Type	Size	Default
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
source-ip	Source IP address for communications to FortiNDR.	string	Maximum length: 63	
status	Enable/disable FortiNDR.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable FortiNDR.		
	<i>enable</i>	Enable FortiNDR.		

## config system fortisandbox

Configure FortiSandbox.

```
config system fortisandbox
    Description: Configure FortiSandbox.
    set email {string}
    set enc-algorithm [default|high|...]
    set forticloud [enable|disable]
    set inline-scan [enable|disable]
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set server {string}
    set source-ip {string}
    set ssl-min-proto-version [default|SSLv3|...]
    set status [enable|disable]
end
```

## config system fortisandbox

Parameter	Description	Type	Size	Default
email	Notifier email address.	string	Maximum length: 63	
enc-algorithm	Configure the level of SSL protection for secure communication with FortiSandbox.	option	-	default

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>default</i>	SSL communication with high and medium encryption algorithms.		
	<i>high</i>	SSL communication with high encryption algorithms.		
	<i>low</i>	SSL communication with low encryption algorithms.		
forticloud	Enable/disable FortiSandbox Cloud.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FortiSandbox Cloud.		
	<i>disable</i>	Disable FortiSandbox Cloud.		
inline-scan	Enable/disable FortiSandbox inline scan.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FortiSandbox inline scan.		
	<i>disable</i>	Disable FortiSandbox inline scan.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
server	Server address of the remote FortiSandbox.	string	Maximum length: 63	
source-ip	Source IP address for communications to FortiSandbox.	string	Maximum length: 63	
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections.	option	-	default
	<b>Option</b>	<b>Description</b>		
	<i>default</i>	Follow system global setting.		
	<i>SSLv3</i>	SSLv3.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>TLSv1</i>	TLSv1.		
	<i>TLSv1-1</i>	TLSv1.1.		
	<i>TLSv1-2</i>	TLSv1.2.		
status	Enable/disable FortiSandbox.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FortiSandbox.		
	<i>disable</i>	Disable FortiSandbox.		

## config system fsso-polling

Configure Fortinet Single Sign On (FSSO) server.

```
config system fsso-polling
    Description: Configure Fortinet Single Sign On (FSSO) server.
    set auth-password {password}
    set authentication [enable|disable]
    set listening-port {integer}
    set status [enable|disable]
end
```

## config system fsso-polling

Parameter	Description	Type	Size	Default
auth-password	Password to connect to FSSO Agent.	password	Not Specified	
authentication	Enable/disable FSSO Agent Authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable FSSO Agent Authentication.		
	<i>disable</i>	Disable FSSO Agent Authentication.		
listening-port	Listening port to accept clients.	integer	Minimum value: 1 Maximum value: 65535	8000
status	Enable/disable FSSO Polling Mode.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FSSO Polling Mode.		
	<i>disable</i>	Disable FSSO Polling Mode.		

## config system ftm-push

Configure FortiToken Mobile push services.

```
config system ftm-push
    Description: Configure FortiToken Mobile push services.
    set server {string}
    set server-cert {string}
    set server-ip {ipv4-address}
    set server-port {integer}
    set status [enable|disable]
end
```

## config system ftm-push

Parameter	Description	Type	Size	Default
server	IPv4 address or domain name of FortiToken Mobile push services server.	string	Maximum length: 127	
server-cert	Name of the server certificate to be used for SSL.	string	Maximum length: 35	Fortinet_Factory
server-ip	IPv4 address of FortiToken Mobile push services server (format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0
server-port	Port to communicate with FortiToken Mobile push services server.	integer	Minimum value: 1 Maximum value: 65535	4433
status	Enable/disable the use of FortiToken Mobile push services.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable FortiToken Mobile push services.		
	<i>disable</i>	Disable FortiToken Mobile push services.		

## config system geneve

Configure GENEVE devices.

```
config system geneve
  Description: Configure GENEVE devices.
  edit <name>
    set dstport {integer}
    set interface {string}
    set ip-version [ipv4-unicast|ipv6-unicast]
    set remote-ip {ipv4-address}
    set remote-ip6 {ipv6-address}
    set type [ethernet|ppp]
    set vni {integer}
  next
end
```

## config system geneve

Parameter	Description	Type	Size	Default						
dstport	GENEVE destination port.	integer	Minimum value: 1 Maximum value: 65535	6081						
interface	Outgoing interface for GENEVE encapsulated traffic.	string	Maximum length: 15							
ip-version	IP version to use for the GENEVE interface and so for communication over the GENEVE. IPv4 or IPv6 unicast.	option	-	ipv4-unicast						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ipv4-unicast</i></td><td>Use IPv4 unicast addressing over the GENEVE.</td></tr><tr><td><i>ipv6-unicast</i></td><td>Use IPv6 unicast addressing over the GENEVE.</td></tr></table>				Option	Description	<i>ipv4-unicast</i>	Use IPv4 unicast addressing over the GENEVE.	<i>ipv6-unicast</i>	Use IPv6 unicast addressing over the GENEVE.
Option	Description									
<i>ipv4-unicast</i>	Use IPv4 unicast addressing over the GENEVE.									
<i>ipv6-unicast</i>	Use IPv6 unicast addressing over the GENEVE.									
name	GENEVE device or interface name. Must be an unique interface name.	string	Maximum length: 15							
remote-ip	IPv4 address of the GENEVE interface on the device at the remote end of the GENEVE.	ipv4-address	Not Specified	0.0.0.0						
remote-ip6	IPv6 IP address of the GENEVE interface on the device at the remote end of the GENEVE.	ipv6-address	Not Specified	::						
type	GENEVE type.	option	-	ethernet						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ethernet</i></td><td>Internal packet includes Ethernet header.</td></tr></table>				Option	Description	<i>ethernet</i>	Internal packet includes Ethernet header.		
Option	Description									
<i>ethernet</i>	Internal packet includes Ethernet header.									

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>ppp</i>	Internal packet does not include Ethernet header.		
vni	GENEVE network ID.	integer	Minimum value: 0 Maximum value: 16777215	0

## config system geoip-override

Configure geographical location mapping for IP address(es) to override mappings from FortiGuard.

```
config system geoip-override
    Description: Configure geographical location mapping for IP address(es) to override
mappings from FortiGuard.
    edit <name>
        set country-id {string}
        set description {string}
        config ip-range
            Description: Table of IP ranges assigned to country.
            edit <id>
                set start-ip {ipv4-address}
                set end-ip {ipv4-address}
            next
        end
        config ip6-range
            Description: Table of IPv6 ranges assigned to country.
            edit <id>
                set start-ip {ipv6-address}
                set end-ip {ipv6-address}
            next
        end
    next
end
```

## config system geoip-override

Parameter	Description	Type	Size	Default
country-id	Two character Country ID code.	string	Maximum length: 2	
description	Description.	string	Maximum length: 127	
name	Location name.	string	Maximum length: 63	

## config ip-range

Parameter	Description	Type	Size	Default
id	ID of individual entry in the IP range table.	integer	Minimum value: 0 Maximum value: 65535	0
start-ip	Starting IP address, inclusive, of the address range (format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0
end-ip	Ending IP address, inclusive, of the address range (format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0

## config ip6-range

Parameter	Description	Type	Size	Default
id	ID of individual entry in the IPv6 range table.	integer	Minimum value: 0 Maximum value: 65535	0
start-ip	Starting IP address, inclusive, of the address range (format: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx).	ipv6-address	Not Specified	::
end-ip	Ending IP address, inclusive, of the address range (format: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx).	ipv6-address	Not Specified	::

## config system global

Configure global attributes.

## config system global

Parameter	Description	Type	Size	Default						
admin-concurrent	Enable/disable concurrent administrator logins. Use policy-auth-concurrent for firewall authenticated users.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable admin concurrent login.</td></tr><tr><td><i>disable</i></td><td>Disable admin concurrent login.</td></tr></table>	Option	Description	<i>enable</i>	Enable admin concurrent login.	<i>disable</i>	Disable admin concurrent login.			
Option	Description									
<i>enable</i>	Enable admin concurrent login.									
<i>disable</i>	Disable admin concurrent login.									
admin-console-timeout	Console login timeout that overrides the admin timeout value.	integer	Minimum value: 0 15 Maximum value: 300							
admin-forticloud-sso-default-profile	Override access profile.	string	Maximum length: 35							
admin-forticloud-sso-login	Enable/disable FortiCloud admin login via SSO.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiCloud admin login via SSO.</td></tr><tr><td><i>disable</i></td><td>Disable FortiCloud admin login via SSO.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiCloud admin login via SSO.	<i>disable</i>	Disable FortiCloud admin login via SSO.			
Option	Description									
<i>enable</i>	Enable FortiCloud admin login via SSO.									
<i>disable</i>	Disable FortiCloud admin login via SSO.									
admin-host	Administrative host for HTTP and HTTPS. When set, will be used in lieu of the client's Host header for any redirection.	string	Maximum length: 255							
admin-hsts-max-age	HTTPS Strict-Transport-Security header max-age in seconds. A value of 0 will reset any HSTS records in the browser. When admin-https-redirect is disabled the header max-age will be 0.	integer	Minimum value: 0 Maximum value: 2147483647	15552000						

Parameter	Description	Type	Size	Default														
admin-https-pki-required	Enable/disable admin login method. Enable to force administrators to provide a valid certificate to log in if PKI is enabled. Disable to allow administrators to log in with a certificate or password.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Admin users must provide a valid certificate when PKI is enabled for HTTPS admin access.</td></tr><tr><td><i>disable</i></td><td>Admin users can login by providing a valid certificate or password.</td></tr></table>	Option	Description	<i>enable</i>	Admin users must provide a valid certificate when PKI is enabled for HTTPS admin access.	<i>disable</i>	Admin users can login by providing a valid certificate or password.											
Option	Description																	
<i>enable</i>	Admin users must provide a valid certificate when PKI is enabled for HTTPS admin access.																	
<i>disable</i>	Admin users can login by providing a valid certificate or password.																	
admin-https-redirect	Enable/disable redirection of HTTP administration access to HTTPS.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable redirecting HTTP administration access to HTTPS.</td></tr><tr><td><i>disable</i></td><td>Disable redirecting HTTP administration access to HTTPS.</td></tr></table>	Option	Description	<i>enable</i>	Enable redirecting HTTP administration access to HTTPS.	<i>disable</i>	Disable redirecting HTTP administration access to HTTPS.											
Option	Description																	
<i>enable</i>	Enable redirecting HTTP administration access to HTTPS.																	
<i>disable</i>	Disable redirecting HTTP administration access to HTTPS.																	
admin-https-ssl-banned-ciphers	Select one or more cipher technologies that cannot be used in GUI HTTPS negotiations. Only applies to TLS 1.2 and below.	option	-															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>RSA</i></td><td>Ban the use of cipher suites using RSA key.</td></tr><tr><td><i>DHE</i></td><td>Ban the use of cipher suites using authenticated ephemeral DH key agreement.</td></tr><tr><td><i>ECDHE</i></td><td>Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.</td></tr><tr><td><i>DSS</i></td><td>Ban the use of cipher suites using DSS authentication.</td></tr><tr><td><i>ECDSA</i></td><td>Ban the use of cipher suites using ECDSA authentication.</td></tr><tr><td><i>AES</i></td><td>Ban the use of cipher suites using either 128 or 256 bit AES.</td></tr></table>	Option	Description	<i>RSA</i>	Ban the use of cipher suites using RSA key.	<i>DHE</i>	Ban the use of cipher suites using authenticated ephemeral DH key agreement.	<i>ECDHE</i>	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.	<i>DSS</i>	Ban the use of cipher suites using DSS authentication.	<i>ECDSA</i>	Ban the use of cipher suites using ECDSA authentication.	<i>AES</i>	Ban the use of cipher suites using either 128 or 256 bit AES.			
Option	Description																	
<i>RSA</i>	Ban the use of cipher suites using RSA key.																	
<i>DHE</i>	Ban the use of cipher suites using authenticated ephemeral DH key agreement.																	
<i>ECDHE</i>	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.																	
<i>DSS</i>	Ban the use of cipher suites using DSS authentication.																	
<i>ECDSA</i>	Ban the use of cipher suites using ECDSA authentication.																	
<i>AES</i>	Ban the use of cipher suites using either 128 or 256 bit AES.																	

Parameter	Description	Type	Size	Default
admin-https-ssl-ciphersuites	Select one or more TLS 1.3 ciphersuites to enable. Does not affect ciphers in TLS 1.2 and below. At least one must be enabled. To disable all, remove TLS1.3 from admin-https-ssl-versions.	option	-	TLS-AES-128-GCM-SHA256 TLS-AES-256-GCM-SHA384 TLS-CHACHA20-POLY1305-SHA256

Parameter	Description	Type	Size	Default								
admin-https-ssl-versions	Allowed TLS versions for web administration.	option	-	tlsv1-2 tlsv1-3								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tlsv1-1</td><td>TLS 1.1.</td></tr><tr><td>tlsv1-2</td><td>TLS 1.2.</td></tr><tr><td>tlsv1-3</td><td>TLS 1.3.</td></tr></table>				Option	Description	tlsv1-1	TLS 1.1.	tlsv1-2	TLS 1.2.	tlsv1-3	TLS 1.3.
	Option	Description										
	tlsv1-1	TLS 1.1.										
	tlsv1-2	TLS 1.2.										
tlsv1-3	TLS 1.3.											
admin-lockout-duration	Amount of time in seconds that an administrator account is locked out after reaching the admin-lockout-threshold for repeated failed login attempts.	integer	Minimum value: 1 Maximum value: 2147483647	60								
admin-lockout-threshold	Number of failed login attempts before an administrator account is locked out for the admin-lockout-duration.	integer	Minimum value: 1 Maximum value: 10	3								
admin-login-max	Maximum number of administrators who can be logged in at the same time.	integer	Minimum value: 1 Maximum value: 100	100								
admin-port	Administrative access port for HTTP..	integer	Minimum value: 1 Maximum value: 65535	80								
admin-reset-button *	Press the reset button can reset to factory default.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>press the reset button can reset to factory default</td></tr><tr><td>disable</td><td>press the reset button cannot reset to factory default</td></tr></table>				Option	Description	enable	press the reset button can reset to factory default	disable	press the reset button cannot reset to factory default		
	Option	Description										
	enable	press the reset button can reset to factory default										
disable	press the reset button cannot reset to factory default											
admin-restrict-local	Enable/disable local admin authentication restriction when remote authenticator is up and running.	option	-	disable								

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable local admin authentication restriction.</td></tr><tr><td><i>disable</i></td><td>Disable local admin authentication restriction.</td></tr></table>				Option	Description	<i>enable</i>	Enable local admin authentication restriction.	<i>disable</i>	Disable local admin authentication restriction.
	Option	Description								
	<i>enable</i>	Enable local admin authentication restriction.								
<i>disable</i>	Disable local admin authentication restriction.									
admin-scp	Enable/disable using SCP to download the system configuration. You can use SCP as an alternative method for backing up the configuration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow system configuration download by SCP.</td></tr><tr><td><i>disable</i></td><td>Disable allow system configuration download by SCP.</td></tr></table>				Option	Description	<i>enable</i>	Enable allow system configuration download by SCP.	<i>disable</i>	Disable allow system configuration download by SCP.
	Option	Description								
	<i>enable</i>	Enable allow system configuration download by SCP.								
<i>disable</i>	Disable allow system configuration download by SCP.									
admin-server-cert	Server certificate that the FortiGate uses for HTTPS administrative connections.	string	Maximum length: 35	Fortinet_GUI_Server						
admin-sport	Administrative access port for HTTPS..	integer	Minimum value: 1 Maximum value: 65535	443						
admin-ssh-grace-time	Maximum time in seconds permitted between making an SSH connection to the FortiGate unit and authenticating.	integer	Minimum value: 10 Maximum value: 3600	120						
admin-ssh-password	Enable/disable password authentication for SSH admin access.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable password authentication for SSH admin access.</td></tr><tr><td><i>disable</i></td><td>Disable password authentication for SSH admin access.</td></tr></table>				Option	Description	<i>enable</i>	Enable password authentication for SSH admin access.	<i>disable</i>	Disable password authentication for SSH admin access.
	Option	Description								
	<i>enable</i>	Enable password authentication for SSH admin access.								
<i>disable</i>	Disable password authentication for SSH admin access.									
admin-ssh-port	Administrative access port for SSH..	integer	Minimum value: 1 Maximum value: 65535	22						

Parameter	Description	Type	Size	Default						
admin-ssh-v1	Enable/disable SSH v1 compatibility.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSH v1 compatibility.</td></tr><tr><td><i>disable</i></td><td>Disable SSH v1 compatibility.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSH v1 compatibility.	<i>disable</i>	Disable SSH v1 compatibility.			
Option	Description									
<i>enable</i>	Enable SSH v1 compatibility.									
<i>disable</i>	Disable SSH v1 compatibility.									
admin-telnet	Enable/disable TELNET service.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable TELNET service.</td></tr><tr><td><i>disable</i></td><td>Disable TELNET service.</td></tr></table>	Option	Description	<i>enable</i>	Enable TELNET service.	<i>disable</i>	Disable TELNET service.			
Option	Description									
<i>enable</i>	Enable TELNET service.									
<i>disable</i>	Disable TELNET service.									
admin-telnet-port	Administrative access port for TELNET..	integer	Minimum value: 1 Maximum value: 65535	23						
admintimeout	Number of minutes before an idle administrator session times out. A shorter idle timeout is more secure.	integer	Minimum value: 1 Maximum value: 480	5						
alias	Alias for your FortiGate unit.	string	Maximum length: 35							
allow-traffic-redirect	Disable to prevent traffic with same local ingress and egress interface from being forwarded without policy check.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow traffic redirect.</td></tr><tr><td><i>disable</i></td><td>Disable allow traffic redirect.</td></tr></table>	Option	Description	<i>enable</i>	Enable allow traffic redirect.	<i>disable</i>	Disable allow traffic redirect.			
Option	Description									
<i>enable</i>	Enable allow traffic redirect.									
<i>disable</i>	Disable allow traffic redirect.									
anti-replay	Level of checking for packet replay and TCP sequence checking.	option	-	strict						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable anti-replay check.</td></tr></table>	Option	Description	<i>disable</i>	Disable anti-replay check.					
Option	Description									
<i>disable</i>	Disable anti-replay check.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>loose</i></td><td>Loose anti-replay check.</td></tr><tr><td><i>strict</i></td><td>Strict anti-replay check.</td></tr></table>	Option	Description	<i>loose</i>	Loose anti-replay check.	<i>strict</i>	Strict anti-replay check.			
	Option	Description								
	<i>loose</i>	Loose anti-replay check.								
<i>strict</i>	Strict anti-replay check.									
arp-max-entry	Maximum number of dynamically learned MAC addresses that can be added to the ARP table.	integer	Minimum value: 131072 Maximum value: 2147483647	131072						
auth-cert	Server certificate that the FortiGate uses for HTTPS firewall authentication connections.	string	Maximum length: 35	Fortinet_Factory						
auth-http-port	User authentication HTTP port..	integer	Minimum value: 1 Maximum value: 65535	1000						
auth-https-port	User authentication HTTPS port..	integer	Minimum value: 1 Maximum value: 65535	1003						
auth-ike-saml-port	User IKE SAML authentication port.	integer	Minimum value: 0 Maximum value: 65535	1001						
auth-keepalive	Enable to prevent user authentication sessions from timing out when idle.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of keep alive to extend authentication.</td></tr><tr><td><i>disable</i></td><td>Disable use of keep alive to extend authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of keep alive to extend authentication.	<i>disable</i>	Disable use of keep alive to extend authentication.			
	Option	Description								
	<i>enable</i>	Enable use of keep alive to extend authentication.								
<i>disable</i>	Disable use of keep alive to extend authentication.									
auth-session-limit	Action to take when the number of allowed user authenticated sessions is reached.	option	-	block-new						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>block-new</i></td><td>Block new user authentication attempts.</td></tr><tr><td><i>logout-inactive</i></td><td>Logout the most inactive user authenticated sessions.</td></tr></table>	Option	Description	<i>block-new</i>	Block new user authentication attempts.	<i>logout-inactive</i>	Logout the most inactive user authenticated sessions.			
	Option	Description								
	<i>block-new</i>	Block new user authentication attempts.								
<i>logout-inactive</i>	Logout the most inactive user authenticated sessions.									

Parameter	Description	Type	Size	Default								
auto-auth-extension-device	Enable/disable automatic authorization of dedicated Fortinet extension devices.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic authorization of dedicated Fortinet extension device globally.</td></tr><tr><td><i>disable</i></td><td>Disable automatic authorization of dedicated Fortinet extension device globally.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device globally.	<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device globally.					
Option	Description											
<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device globally.											
<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device globally.											
autorun-log-fsck	Enable/disable automatic log partition check after ungraceful shutdown.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic log partition check after ungraceful shutdown.</td></tr><tr><td><i>disable</i></td><td>Disable automatic log partition check after ungraceful shutdown.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic log partition check after ungraceful shutdown.	<i>disable</i>	Disable automatic log partition check after ungraceful shutdown.					
Option	Description											
<i>enable</i>	Enable automatic log partition check after ungraceful shutdown.											
<i>disable</i>	Disable automatic log partition check after ungraceful shutdown.											
av-affinity *	Affinity setting for AV scanning (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxx).	string	Maximum length: 79	0								
av-failopen	Set the action to take if the FortiGate is running low on memory or the proxy connection limit has been reached.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Bypass the antivirus system when memory is low. Antivirus scanning resumes when the low memory condition is resolved.</td></tr><tr><td><i>off</i></td><td>Stop accepting new AV sessions when entering conserve mode, but continue to process current active sessions.</td></tr><tr><td><i>one-shot</i></td><td>Bypass the antivirus system when memory is low.</td></tr></table>	Option	Description	<i>pass</i>	Bypass the antivirus system when memory is low. Antivirus scanning resumes when the low memory condition is resolved.	<i>off</i>	Stop accepting new AV sessions when entering conserve mode, but continue to process current active sessions.	<i>one-shot</i>	Bypass the antivirus system when memory is low.			
Option	Description											
<i>pass</i>	Bypass the antivirus system when memory is low. Antivirus scanning resumes when the low memory condition is resolved.											
<i>off</i>	Stop accepting new AV sessions when entering conserve mode, but continue to process current active sessions.											
<i>one-shot</i>	Bypass the antivirus system when memory is low.											

Parameter	Description	Type	Size	Default						
av-failopen-session	When enabled and a proxy for a protocol runs out of room in its session table, that protocol goes into failopen mode and enacts the action specified by av-failopen.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AV fail open session option.</td></tr><tr><td><i>disable</i></td><td>Disable AV fail open session option.</td></tr></table>	Option	Description	<i>enable</i>	Enable AV fail open session option.	<i>disable</i>	Disable AV fail open session option.			
Option	Description									
<i>enable</i>	Enable AV fail open session option.									
<i>disable</i>	Disable AV fail open session option.									
batch-cmdb	Enable/disable batch mode, allowing you to enter a series of CLI commands that will execute as a group once they are loaded.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable batch mode to execute in CMDB server.</td></tr><tr><td><i>disable</i></td><td>Disable batch mode to execute in CMDB server.</td></tr></table>	Option	Description	<i>enable</i>	Enable batch mode to execute in CMDB server.	<i>disable</i>	Disable batch mode to execute in CMDB server.			
Option	Description									
<i>enable</i>	Enable batch mode to execute in CMDB server.									
<i>disable</i>	Disable batch mode to execute in CMDB server.									
block-session-timer	Duration in seconds for blocked sessions.	integer	Minimum value: 30 1 Maximum value: 300							
br-fdb-max-entry	Maximum number of bridge forwarding database (FDB) entries.	integer	Minimum value: 8192 Maximum value: 2147483647							
cert-chain-max	Maximum number of certificates that can be traversed in a certificate chain.	integer	Minimum value: 8 1 Maximum value: 2147483647							
cfg-revert-timeout	Time-out for reverting to the last saved configuration..	integer	Minimum value: 600 10 Maximum value: 4294967295							
cfg-save	Configuration file save mode for CLI changes.	option	-	automatic						

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>automatic</i>	Automatically save config.		
	<i>manual</i>	Manually save config.		
	<i>revert</i>	Manually save config and revert the config when timeout.		
check-protocol-header	Level of checking performed on protocol headers. Strict checking is more thorough but may affect performance. Loose checking is OK in most cases.	option	-	loose
	<b>Option</b> <b>Description</b>			
	<i>loose</i>	Check protocol header loosely.		
	<i>strict</i>	Check protocol header strictly.		
check-reset-range	Configure ICMP error message verification. You can either apply strict RST range checking or disable it.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>strict</i>	Check RST range strictly.		
	<i>disable</i>	Disable RST range check.		
cli-audit-log	Enable/disable CLI audit log.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable CLI audit log.		
	<i>disable</i>	Disable CLI audit log.		
cloud-communication	Enable/disable all cloud communication.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Allow cloud communication.		
	<i>disable</i>	Disable all cloud-related settings.		

Parameter	Description	Type	Size	Default
clt-cert-req	Enable/disable requiring administrators to have a client certificate to log into the GUI using HTTPS.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable require client certificate for GUI login.		
	<i>disable</i>	Disable require client certificate for GUI login.		
cmdbsvr-affinity	Affinity setting for cmdbsvr (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxx).	string	Maximum length: 79	1
cpu-use-threshold	Threshold at which CPU usage is reported.	integer	Minimum value: 50 Maximum value: 99	90
csr-ca-attribute	Enable/disable the CA attribute in certificates. Some CA servers reject CSRs that have the CA attribute.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable CA attribute in CSR.		
	<i>disable</i>	Disable CA attribute in CSR.		
daily-restart	Enable/disable daily restart of FortiGate unit. Use the restart-time option to set the time of day for the restart.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable daily reboot of the FortiGate.		
	<i>disable</i>	Disable daily reboot of the FortiGate.		
default-service-source-port	Default service source port range.	user	Not Specified	

Parameter	Description	Type	Size	Default																
device-idle-timeout	Time in seconds that a device must be idle to automatically log the device user out..	integer	Minimum value: 30 Maximum value: 31536000	300																
dh-params	Number of bits to use in the Diffie-Hellman exchange for HTTPS/SSH protocols.	option	-	2048																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1024</td><td>1024 bits.</td></tr><tr><td>1536</td><td>1536 bits.</td></tr><tr><td>2048</td><td>2048 bits.</td></tr><tr><td>3072</td><td>3072 bits.</td></tr><tr><td>4096</td><td>4096 bits.</td></tr><tr><td>6144</td><td>6144 bits.</td></tr><tr><td>8192</td><td>8192 bits.</td></tr></table>				Option	Description	1024	1024 bits.	1536	1536 bits.	2048	2048 bits.	3072	3072 bits.	4096	4096 bits.	6144	6144 bits.	8192	8192 bits.
	Option	Description																		
	1024	1024 bits.																		
	1536	1536 bits.																		
	2048	2048 bits.																		
	3072	3072 bits.																		
	4096	4096 bits.																		
	6144	6144 bits.																		
8192	8192 bits.																			
dnsproxy-worker-count	DNS proxy worker count. For a FortiGate with multiple logical CPUs, you can set the DNS process number from 1 to the number of logical CPUs.	integer	Minimum value: 1 Maximum value: 8 **	1																
early-tcp-npu-session	Enable/disable early TCP NPU session.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable early TCP NPU session in order to guarantee packet order of 3-way handshake.</td></tr><tr><td>disable</td><td>Disable early TCP NPU session in order to guarantee packet order of 3-way handshake.</td></tr></table>				Option	Description	enable	Enable early TCP NPU session in order to guarantee packet order of 3-way handshake.	disable	Disable early TCP NPU session in order to guarantee packet order of 3-way handshake.										
	Option	Description																		
	enable	Enable early TCP NPU session in order to guarantee packet order of 3-way handshake.																		
disable	Disable early TCP NPU session in order to guarantee packet order of 3-way handshake.																			
edit-vdom-prompt *	Enable/disable edit new VDOM prompt.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable edit new VDOM prompt.</td></tr><tr><td>disable</td><td>Disable edit new VDOM prompt.</td></tr></table>				Option	Description	enable	Enable edit new VDOM prompt.	disable	Disable edit new VDOM prompt.										
	Option	Description																		
	enable	Enable edit new VDOM prompt.																		
disable	Disable edit new VDOM prompt.																			

Parameter	Description	Type	Size	Default						
extender-controller-reserved-network	Configure reserved network subnet for managed LAN extension FortiExtender units. This is available when the FortiExtender daemon is running.	ipv4-classnet-host	Not Specified	10.252.0.1 255.255.0.0						
failtime	Fail-time for server lost.	integer	Minimum value: 0 Maximum value: 4294967295	5						
faz-disk-buffer-size	Maximum disk buffer size to temporarily store logs destined for FortiAnalyzer. To be used in the event that FortiAnalyzer is unavailable.	integer	Minimum value: 0 Maximum value: 214748364	0						
fds-statistics	Enable/disable sending IPS, Application Control, and AntiVirus data to FortiGuard. This data is used to improve FortiGuard services and is not shared with external parties and is protected by Fortinet's privacy policy.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiGuard statistics.</td></tr><tr><td>disable</td><td>Disable FortiGuard statistics.</td></tr></table>				Option	Description	enable	Enable FortiGuard statistics.	disable	Disable FortiGuard statistics.
	Option	Description								
	enable	Enable FortiGuard statistics.								
disable	Disable FortiGuard statistics.									
fds-statistics-period	FortiGuard statistics collection period in minutes..	integer	Minimum value: 1 Maximum value: 1440	60						
fgd-alert-subscription	Type of alert to retrieve from FortiGuard.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>advisory</td><td>Retrieve FortiGuard advisories, report and news alerts.</td></tr></table>				Option	Description	advisory	Retrieve FortiGuard advisories, report and news alerts.		
	Option	Description								
advisory	Retrieve FortiGuard advisories, report and news alerts.									

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>latest-threat</i></td><td>Retrieve latest FortiGuard threats alerts.</td></tr><tr><td><i>latest-virus</i></td><td>Retrieve latest FortiGuard virus alerts.</td></tr><tr><td><i>latest-attack</i></td><td>Retrieve latest FortiGuard attack alerts.</td></tr><tr><td><i>new-antivirus-db</i></td><td>Retrieve FortiGuard AV database release alerts.</td></tr><tr><td><i>new-attack-db</i></td><td>Retrieve FortiGuard IPS database release alerts.</td></tr></table>				Option	Description	<i>latest-threat</i>	Retrieve latest FortiGuard threats alerts.	<i>latest-virus</i>	Retrieve latest FortiGuard virus alerts.	<i>latest-attack</i>	Retrieve latest FortiGuard attack alerts.	<i>new-antivirus-db</i>	Retrieve FortiGuard AV database release alerts.	<i>new-attack-db</i>	Retrieve FortiGuard IPS database release alerts.
	Option	Description														
	<i>latest-threat</i>	Retrieve latest FortiGuard threats alerts.														
	<i>latest-virus</i>	Retrieve latest FortiGuard virus alerts.														
	<i>latest-attack</i>	Retrieve latest FortiGuard attack alerts.														
	<i>new-antivirus-db</i>	Retrieve FortiGuard AV database release alerts.														
<i>new-attack-db</i>	Retrieve FortiGuard IPS database release alerts.															
forticontroller-proxy *	Enable/disable FortiController proxy.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.						
	Option	Description														
	<i>enable</i>	Enable setting.														
<i>disable</i>	Disable setting.															
forticontroller-proxy-port *	FortiController proxy port.	integer	Minimum value: 1024 Maximum value: 49150	11133												
fortiextender	Enable/disable FortiExtender.	option	-	disable **												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable FortiExtender controller.</td></tr><tr><td><i>enable</i></td><td>Enable FortiExtender controller.</td></tr></table>				Option	Description	<i>disable</i>	Disable FortiExtender controller.	<i>enable</i>	Enable FortiExtender controller.						
	Option	Description														
	<i>disable</i>	Disable FortiExtender controller.														
<i>enable</i>	Enable FortiExtender controller.															
fortiextender-data-port	FortiExtender data port.	integer	Minimum value: 1024 Maximum value: 49150	25246												
fortiextender-discovery-lockdown	Enable/disable FortiExtender CAPWAP lockdown.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Unlock down new FortiExtender device discovery.</td></tr><tr><td><i>enable</i></td><td>Lock down new FortiExtender device discovery.</td></tr></table>				Option	Description	<i>disable</i>	Unlock down new FortiExtender device discovery.	<i>enable</i>	Lock down new FortiExtender device discovery.						
	Option	Description														
	<i>disable</i>	Unlock down new FortiExtender device discovery.														
<i>enable</i>	Lock down new FortiExtender device discovery.															

Parameter	Description	Type	Size	Default						
fortiextender-provision-on-authorization	Enable/disable automatic provisioning of latest FortiExtender firmware on authorization.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiExtender firmware provision on authorization.</td></tr><tr><td><i>disable</i></td><td>Disable FortiExtender firmware provision on authorization.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiExtender firmware provision on authorization.	<i>disable</i>	Disable FortiExtender firmware provision on authorization.			
Option	Description									
<i>enable</i>	Enable FortiExtender firmware provision on authorization.									
<i>disable</i>	Disable FortiExtender firmware provision on authorization.									
fortiextender-vlan-mode	Enable/disable FortiExtender VLAN mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiExtender VLAN mode.</td></tr><tr><td><i>disable</i></td><td>Disable FortiExtender VLAN mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiExtender VLAN mode.	<i>disable</i>	Disable FortiExtender VLAN mode.			
Option	Description									
<i>enable</i>	Enable FortiExtender VLAN mode.									
<i>disable</i>	Disable FortiExtender VLAN mode.									
fortiservice-port	FortiService port. Used by FortiClient endpoint compliance. Older versions of FortiClient used a different port.	integer	Minimum value: 1 Maximum value: 65535	8013						
fortitoken-cloud	Enable/disable FortiToken Cloud service.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiToken Cloud service.</td></tr><tr><td><i>disable</i></td><td>Disable FortiToken Cloud service.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiToken Cloud service.	<i>disable</i>	Disable FortiToken Cloud service.			
Option	Description									
<i>enable</i>	Enable FortiToken Cloud service.									
<i>disable</i>	Disable FortiToken Cloud service.									
gui-allow-default-hostname	Enable/disable the factory default hostname warning on the GUI setup wizard.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									

Parameter	Description	Type	Size	Default						
gui-allow-incompatible-fabric-fgt	Enable/disable Allow FGT with incompatible firmware to be treated as compatible in security fabric on the GUI. May cause unexpected error.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-app-detection-sdwan	Enable/disable Allow app-detection based SD-WAN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-cdn-domain-override	Domain of CDN server.	string	Maximum length: 255							
gui-cdn-usage	Enable/disable Load GUI static files from a CDN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-certificates	Enable/disable the System > Certificate GUI page, allowing you to add and configure certificates from the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-custom-language	Enable/disable custom languages in GUI.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-date-format	Default date format used throughout GUI.	option	-	yyyy/MM/dd
	<b>Option</b>	<b>Description</b>		
	<i>yyyy/MM/dd</i>	Year/Month/Day.		
	<i>dd/MM/yyyy</i>	Day/Month/Year.		
	<i>MM/dd/yyyy</i>	Month/Day/Year.		
	<i>yyyy-MM-dd</i>	Year-Month-Day.		
	<i>dd-MM-yyyy</i>	Day-Month-Year.		
	<i>MM-dd-yyyy</i>	Month-Day-Year.		
gui-date-time-source	Source from which the FortiGate GUI uses to display date and time entries.	option	-	system
	<b>Option</b>	<b>Description</b>		
	<i>system</i>	Use this FortiGate unit's configured timezone.		
	<i>browser</i>	Use the web browser's timezone.		
gui-device-latitude	Add the latitude of the location of this FortiGate to position it on the Threat Map.	string	Maximum length: 19	
gui-device-longitude	Add the longitude of the location of this FortiGate to position it on the Threat Map.	string	Maximum length: 19	
gui-display-hostname	Enable/disable displaying the FortiGate's hostname on the GUI login page.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Display the feature in GUI.		

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Do not display the feature in GUI.		
	<i>enable</i>	Display the feature in GUI.		
gui-firmware-upgrade-warning	Enable/disable the firmware upgrade warning on the GUI.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-forticare-registration-setup-warning	Enable/disable the FortiCare registration setup warning on the GUI.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-fortigate-cloud-sandbox	Enable/disable displaying FortiGate Cloud Sandbox on the GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-ipv6	Enable/disable IPv6 settings on the GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-local-out	Enable/disable Local-out traffic on the GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Display the feature in GUI.		

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>disable</i>			Do not display the feature in GUI.
gui-replacement-message-groups	Enable/disable replacement message groups on the GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>			Display the feature in GUI.
	<i>disable</i>			Do not display the feature in GUI.
gui-rest-api-cache	Enable/disable REST API result caching on FortiGate.	option	-	enable **
	<b>Option</b> <b>Description</b>			
	<i>enable</i>			Enable REST API result caching on FortiGate.
	<i>disable</i>			Disable REST API result caching on FortiGate.
gui-theme	Color scheme for the administration GUI.	option	-	jade
	<b>Option</b> <b>Description</b>			
	<i>jade</i>			Jade theme.
	<i>neutrino</i>			Neutrino theme.
	<i>mariner</i>			Mariner theme.
	<i>graphite</i>			Graphite theme.
	<i>melongene</i>			Melongene theme.
	<i>retro</i>			FortiOS v3 Retro theme.
	<i>dark-matter</i>			Dark Matter theme.
	<i>onyx</i>			Onyx theme.
	<i>eclipse</i>			Eclipse theme.
gui-wireless-opensecurity	Enable/disable wireless open security option on the GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>			Display the feature in GUI.

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>				Option	Description	<i>disable</i>	Do not display the feature in GUI.		
	Option	Description								
	<i>disable</i>	Do not display the feature in GUI.								
gui-workflow-management	Enable/disable Workflow management features on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>				Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.
	Option	Description								
	<i>enable</i>	Display the feature in GUI.								
<i>disable</i>	Do not display the feature in GUI.									
ha-affinity	Affinity setting for HA daemons (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	1						
honor-df	Enable/disable honoring of Don't-Fragment (DF) flag.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable honoring of Don't-Fragment flag.</td></tr><tr><td><i>disable</i></td><td>Disable honoring of Don't-Fragment flag.</td></tr></table>				Option	Description	<i>enable</i>	Enable honoring of Don't-Fragment flag.	<i>disable</i>	Disable honoring of Don't-Fragment flag.
	Option	Description								
	<i>enable</i>	Enable honoring of Don't-Fragment flag.								
<i>disable</i>	Disable honoring of Don't-Fragment flag.									
hostname	FortiGate unit's hostname. Most models will truncate names longer than 24 characters. Some models support hostnames up to 35 characters.	string	Maximum length: 35							
hyper-scale-vdom-num *	Number of VDOMs for hyper scale license.	integer	Minimum value: 1 Maximum value: 250	250						
igmp-state-limit	Maximum number of IGMP memberships.	integer	Minimum value: 96 Maximum value: 128000	3200						
interface-subnet-usage	Enable/disable allowing use of interface-subnet setting in firewall addresses.	option	-	enable						

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disallow use of the interface-subnet setting in firewall addresses. Use in conjunction with the FortiGate REST API and when a large number of firewall addresses exist in the configuration.</td></tr><tr><td><i>enable</i></td><td>Allow use of the interface-subnet setting in firewall addresses.</td></tr></table>	Option	Description	<i>disable</i>	Disallow use of the interface-subnet setting in firewall addresses. Use in conjunction with the FortiGate REST API and when a large number of firewall addresses exist in the configuration.	<i>enable</i>	Allow use of the interface-subnet setting in firewall addresses.											
	Option	Description																
	<i>disable</i>	Disallow use of the interface-subnet setting in firewall addresses. Use in conjunction with the FortiGate REST API and when a large number of firewall addresses exist in the configuration.																
<i>enable</i>	Allow use of the interface-subnet setting in firewall addresses.																	
internal-switch-speed *	Internal port speed.	option	-															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>auto</td></tr><tr><td><i>1000full</i></td><td>1000M Full</td></tr><tr><td><i>100full</i></td><td>100M full.</td></tr><tr><td><i>100half</i></td><td>100M half.</td></tr><tr><td><i>10full</i></td><td>10M full.</td></tr><tr><td><i>10half</i></td><td>10M half.</td></tr></table>	Option	Description	<i>auto</i>	auto	<i>1000full</i>	1000M Full	<i>100full</i>	100M full.	<i>100half</i>	100M half.	<i>10full</i>	10M full.	<i>10half</i>	10M half.			
	Option	Description																
	<i>auto</i>	auto																
	<i>1000full</i>	1000M Full																
	<i>100full</i>	100M full.																
	<i>100half</i>	100M half.																
	<i>10full</i>	10M full.																
<i>10half</i>	10M half.																	
internet-service-database	Configure which Internet Service database size to download from FortiGuard and use.	option	-	full **														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mini</i></td><td>Small sized Internet Service database with very limited IP addresses.</td></tr><tr><td><i>standard</i></td><td>Medium sized Internet Service database with most IP addresses.</td></tr><tr><td><i>full</i></td><td>Full sized Internet Service database with all IP addresses.</td></tr><tr><td><i>on-demand</i></td><td>Internet Service database with customer selected IP addresses.</td></tr></table>	Option	Description	<i>mini</i>	Small sized Internet Service database with very limited IP addresses.	<i>standard</i>	Medium sized Internet Service database with most IP addresses.	<i>full</i>	Full sized Internet Service database with all IP addresses.	<i>on-demand</i>	Internet Service database with customer selected IP addresses.							
	Option	Description																
	<i>mini</i>	Small sized Internet Service database with very limited IP addresses.																
	<i>standard</i>	Medium sized Internet Service database with most IP addresses.																
	<i>full</i>	Full sized Internet Service database with all IP addresses.																
<i>on-demand</i>	Internet Service database with customer selected IP addresses.																	
interval	Dead gateway detection interval.	integer	Minimum value: 5 0 Maximum value: 4294967295															
ip-fragment-mem-thresholds	Maximum memory (MB) used to reassemble IPv4/IPv6 fragments.	integer	Minimum value: 32 32 Maximum value: 2047															
ip-src-port-range	IP source port range used for traffic originating from the FortiGate unit.	user	Not Specified	1024-25000														

Parameter	Description	Type	Size	Default						
ips-affinity *	Affinity setting for IPS (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx; allowed CPUs must be less than total number of IPS engine daemons).	string	Maximum length: 79	0						
ipsec-asic-offload *	Enable/disable ASIC offloading (hardware acceleration) for IPsec VPN traffic. Hardware acceleration can offload IPsec VPN sessions and accelerate encryption and decryption.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable ASIC offload for IPsec VPN.</td></tr><tr><td>disable</td><td>Disable ASIC offload for IPsec VPN.</td></tr></table>	Option	Description	enable	Enable ASIC offload for IPsec VPN.	disable	Disable ASIC offload for IPsec VPN.			
Option	Description									
enable	Enable ASIC offload for IPsec VPN.									
disable	Disable ASIC offload for IPsec VPN.									
ipsec-ha-seqjump-rate	ESP jump ahead rate (1G - 10G pps equivalent).	integer	Minimum value: 1 Maximum value: 10	10						
ipsec-hmac-offload *	Enable/disable offloading (hardware acceleration) of HMAC processing for IPsec VPN.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable offload IPsec HMAC processing to hardware if possible.</td></tr><tr><td>disable</td><td>Disable offload IPsec HMAC processing to hardware.</td></tr></table>	Option	Description	enable	Enable offload IPsec HMAC processing to hardware if possible.	disable	Disable offload IPsec HMAC processing to hardware.			
Option	Description									
enable	Enable offload IPsec HMAC processing to hardware if possible.									
disable	Disable offload IPsec HMAC processing to hardware.									
ipsec-round-robin *	Enable/disable round-robin redistribution to multiple CPUs for IPsec VPN traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable round-robin redistribution for IPsec VPN.</td></tr><tr><td>disable</td><td>Disable round-robin redistribution for IPsec VPN.</td></tr></table>	Option	Description	enable	Enable round-robin redistribution for IPsec VPN.	disable	Disable round-robin redistribution for IPsec VPN.			
Option	Description									
enable	Enable round-robin redistribution for IPsec VPN.									
disable	Disable round-robin redistribution for IPsec VPN.									

Parameter	Description	Type	Size	Default
ipsec-soft-dec-async	Enable/disable software decryption asynchronization (using multiple CPUs to do decryption) for IPsec VPN traffic.	option	-	disable
	Option	Description		
	enable	Enable software decryption asynchronization for IPsec VPN.		
	disable	Disable software decryption asynchronization for IPsec VPN.		
ipv6-accept-dad	Enable/disable acceptance of IPv6 Duplicate Address Detection (DAD).	integer	Minimum value: 0 Maximum value: 2	1
ipv6-allow-anycast-probe	Enable/disable IPv6 address probe through Anycast.	option	-	disable
	Option	Description		
	enable	Enable probing of IPv6 address space through Anycast		
	disable	Disable probing of IPv6 address space through Anycast		
ipv6-allow-local-in-slient-drop	Enable/disable silent drop of IPv6 local-in traffic.	option	-	enable
	Option	Description		
	enable	Enable slient drop of IPv6 local-in traffic.		
	disable	Disable slient drop of IPv6 local-in traffic.		
ipv6-allow-multicast-probe	Enable/disable IPv6 address probe through Multicast.	option	-	disable
	Option	Description		
	enable	Enable probing of IPv6 address space through Multicast.		
	disable	Disable probing of IPv6 address space through Multicast.		

Parameter	Description	Type	Size	Default																		
ipv6-allow-traffic-redirect	Disable to prevent IPv6 traffic with same local ingress and egress interface from being forwarded without policy check.	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow traffic IPv6 redirect.</td></tr><tr><td><i>disable</i></td><td>Disable allow traffic IPv6 redirect.</td></tr></table>	Option	Description	<i>enable</i>	Enable allow traffic IPv6 redirect.	<i>disable</i>	Disable allow traffic IPv6 redirect.															
Option	Description																					
<i>enable</i>	Enable allow traffic IPv6 redirect.																					
<i>disable</i>	Disable allow traffic IPv6 redirect.																					
irq-time-accounting	Configure CPU IRQ time accounting mode.	option	-	auto																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically switch CPU accounting mode.</td></tr><tr><td><i>force</i></td><td>Force the use of CPU IRQ time accounting mode.</td></tr></table>	Option	Description	<i>auto</i>	Automatically switch CPU accounting mode.	<i>force</i>	Force the use of CPU IRQ time accounting mode.															
Option	Description																					
<i>auto</i>	Automatically switch CPU accounting mode.																					
<i>force</i>	Force the use of CPU IRQ time accounting mode.																					
language	GUI display language.	option	-	english																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>english</i></td><td>English.</td></tr><tr><td><i>french</i></td><td>French.</td></tr><tr><td><i>spanish</i></td><td>Spanish.</td></tr><tr><td><i>portuguese</i></td><td>Portuguese.</td></tr><tr><td><i>japanese</i></td><td>Japanese.</td></tr><tr><td><i>trach</i></td><td>Traditional Chinese.</td></tr><tr><td><i>simch</i></td><td>Simplified Chinese.</td></tr><tr><td><i>korean</i></td><td>Korean.</td></tr></table>	Option	Description	<i>english</i>	English.	<i>french</i>	French.	<i>spanish</i>	Spanish.	<i>portuguese</i>	Portuguese.	<i>japanese</i>	Japanese.	<i>trach</i>	Traditional Chinese.	<i>simch</i>	Simplified Chinese.	<i>korean</i>	Korean.			
Option	Description																					
<i>english</i>	English.																					
<i>french</i>	French.																					
<i>spanish</i>	Spanish.																					
<i>portuguese</i>	Portuguese.																					
<i>japanese</i>	Japanese.																					
<i>trach</i>	Traditional Chinese.																					
<i>simch</i>	Simplified Chinese.																					
<i>korean</i>	Korean.																					
ldapconntimeout	Global timeout for connections with remote LDAP servers in milliseconds.	integer	Minimum value: 1 Maximum value: 300000	500																		
legacy-poe-device-support *	Enable/disable legacy POE device support.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable legacy POE device support.</td></tr></table>	Option	Description	<i>enable</i>	Enable legacy POE device support.																	
Option	Description																					
<i>enable</i>	Enable legacy POE device support.																					

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable legacy POE device support.		
lldp-reception	Enable/disable Link Layer Discovery Protocol (LLDP) reception.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).		
	<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).		
lldp-transmission	Enable/disable Link Layer Discovery Protocol (LLDP) transmission.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).		
	<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).		
log-single-cpu-high	Enable/disable logging the event of a single CPU core reaching CPU usage threshold.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable logging the event of a single CPU core reaching CPU usage threshold.		
	<i>disable</i>	Disable logging the event of a single CPU core reaching CPU usage threshold.		
log-ssl-connection	Enable/disable logging of SSL connection events.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable logging of SSL connection events.		
	<i>disable</i>	Disable logging of SSL connection events.		
log-uuid-address	Enable/disable insertion of address UUIDs to traffic logs.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable insertion of address UUID to traffic logs.		
	<i>disable</i>	Disable insertion of address UUID to traffic logs.		
login-timestamp	Enable/disable login time recording.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable login time recording.		
	<i>disable</i>	Disable login time recording.		
long-vdom-name *	Enable/disable long VDOM name support.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable long VDOM name support.		
	<i>disable</i>	Disable long VDOM name support.		
management-ip	Management IP address of this FortiGate. Used to log into this FortiGate from another FortiGate in the Security Fabric.	string	Maximum length: 255	
management-port	Overriding port for management connection (Overrides admin port).	integer	Minimum value: 443 1 Maximum value: 65535	
management-port-use-admin-sport	Enable/disable use of the admin-sport setting for the management port. If disabled, FortiGate will allow user to specify management-port.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable use of the admin-sport setting for the management port.		
	<i>disable</i>	Disable use of the admin-sport setting for the management port.		
management-vdom	Management virtual domain name.	string	Maximum length: 31	root

Parameter	Description	Type	Size	Default						
max-route-cache-size	Maximum number of IP route cache entries.	integer	Minimum value: 0 Maximum value: 2147483647	0						
memory-use-threshold-extreme	Threshold at which memory usage is considered extreme.	integer	Minimum value: 70 Maximum value: 97	95						
memory-use-threshold-green	Threshold at which memory usage forces the FortiGate to exit conserve mode.	integer	Minimum value: 70 Maximum value: 97	82						
memory-use-threshold-red	Threshold at which memory usage forces the FortiGate to enter conserve mode.	integer	Minimum value: 70 Maximum value: 97	88						
miglog-affinity *	Affinity setting for logging (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0						
miglogd-children	Number of logging (miglogd) processes to be allowed to run. Higher number can reduce performance; lower number can slow log processing time. No logs will be dropped or lost if the number is changed.	integer	Minimum value: 0 Maximum value: 15	0						
multi-factor-authentication	Enforce all login methods to require an additional authentication factor.	option	-	optional						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>optional</i></td><td>Do not enforce all login methods to require an additional authentication factor (controlled by user settings).</td></tr><tr><td><i>mandatory</i></td><td>Enforce all login methods to require an additional authentication factor.</td></tr></table>				Option	Description	<i>optional</i>	Do not enforce all login methods to require an additional authentication factor (controlled by user settings).	<i>mandatory</i>	Enforce all login methods to require an additional authentication factor.
Option	Description									
<i>optional</i>	Do not enforce all login methods to require an additional authentication factor (controlled by user settings).									
<i>mandatory</i>	Enforce all login methods to require an additional authentication factor.									

Parameter	Description	Type	Size	Default						
ndp-max-entry	Maximum number of NDP table entries (set to 65,536 or higher; if set to 0, kernel holds 65,536 entries).	integer	Minimum value: 65536 Maximum value: 2147483647	0						
per-user-bal *	Enable/disable per-user block/allow list filter.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable per-user block/allow list filter.</td></tr><tr><td><i>disable</i></td><td>Disable per-user block/allow list filter.</td></tr></table>	Option	Description	<i>enable</i>	Enable per-user block/allow list filter.	<i>disable</i>	Disable per-user block/allow list filter.			
Option	Description									
<i>enable</i>	Enable per-user block/allow list filter.									
<i>disable</i>	Disable per-user block/allow list filter.									
pmtu-discovery	Enable/disable path MTU discovery.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable path MTU discovery.</td></tr><tr><td><i>disable</i></td><td>Disable path MTU discovery.</td></tr></table>	Option	Description	<i>enable</i>	Enable path MTU discovery.	<i>disable</i>	Disable path MTU discovery.			
Option	Description									
<i>enable</i>	Enable path MTU discovery.									
<i>disable</i>	Disable path MTU discovery.									
policy-auth-concurrent	Number of concurrent firewall use logins from the same user.	integer	Minimum value: 0 Maximum value: 100	0						
post-login-banner	Enable/disable displaying the administrator access disclaimer message after an administrator successfully logs in.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable post-login banner.</td></tr><tr><td><i>enable</i></td><td>Enable post-login banner.</td></tr></table>	Option	Description	<i>disable</i>	Disable post-login banner.	<i>enable</i>	Enable post-login banner.			
Option	Description									
<i>disable</i>	Disable post-login banner.									
<i>enable</i>	Enable post-login banner.									
pre-login-banner	Enable/disable displaying the administrator access disclaimer message on the login page before an administrator logs in.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable pre-login banner.		
	<i>disable</i>	Disable pre-login banner.		
private-data-encryption	Enable/disable private data encryption using an AES 128-bit key or passphrase.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable private data encryption using an AES 128-bit key.		
	<i>enable</i>	Enable private data encryption using an AES 128-bit key.		
proxy-auth-lifetime	Enable/disable authenticated users lifetime control. This is a cap on the total time a proxy user can be authenticated for after which re-authentication will take place.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable authenticated users lifetime control.		
	<i>disable</i>	Disable authenticated users lifetime control.		
proxy-auth-lifetime-timeout	Lifetime timeout in minutes for authenticated users.	integer	Minimum value: 5 Maximum value: 65535	480
proxy-auth-timeout	Authentication timeout in minutes for authenticated users.	integer	Minimum value: 1 Maximum value: 300	10
proxy-cert-use-mgmt-vdom	Enable/disable using management VDOM to send requests.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

Parameter	Description	Type	Size	Default								
proxy-hardware-acceleration *	Enable/disable email proxy hardware acceleration.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable email proxy hardware acceleration.</td></tr><tr><td>enable</td><td>Enable email proxy hardware acceleration.</td></tr></table>	Option	Description	disable	Disable email proxy hardware acceleration.	enable	Enable email proxy hardware acceleration.					
Option	Description											
disable	Disable email proxy hardware acceleration.											
enable	Enable email proxy hardware acceleration.											
proxy-keep-alive-mode	Control if users must re-authenticate after a session is closed, traffic has been idle, or from the point at which the user was authenticated.	option	-	session								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>session</td><td>Proxy keep-alive timeout begins at the closure of the session.</td></tr><tr><td>traffic</td><td>Proxy keep-alive timeout begins after traffic has not been received.</td></tr><tr><td>re-authentication</td><td>Proxy keep-alive timeout begins when the user was authenticated.</td></tr></table>	Option	Description	session	Proxy keep-alive timeout begins at the closure of the session.	traffic	Proxy keep-alive timeout begins after traffic has not been received.	re-authentication	Proxy keep-alive timeout begins when the user was authenticated.			
Option	Description											
session	Proxy keep-alive timeout begins at the closure of the session.											
traffic	Proxy keep-alive timeout begins after traffic has not been received.											
re-authentication	Proxy keep-alive timeout begins when the user was authenticated.											
proxy-re-authentication-time	The time limit that users must re-authenticate if proxy-keep-alive-mode is set to re-authenticate (1 - 86400 sec, default=30s.	integer	Minimum value: 1 Maximum value: 86400	30								
proxy-resource-mode	Enable/disable use of the maximum memory usage on the FortiGate unit's proxy processing of resources, such as block lists, allow lists, and external resources.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of the maximum memory usage.</td></tr><tr><td>disable</td><td>Disable use of the maximum memory usage.</td></tr></table>	Option	Description	enable	Enable use of the maximum memory usage.	disable	Disable use of the maximum memory usage.					
Option	Description											
enable	Enable use of the maximum memory usage.											
disable	Disable use of the maximum memory usage.											
proxy-worker-count	Proxy worker count.	integer	Minimum value: 1 Maximum value: 8 **	0								

Parameter	Description	Type	Size	Default
radius-port	RADIUS service port number.	integer	Minimum value: 1 Maximum value: 65535	1812
reboot-upon-config-restore	Enable/disable reboot of system upon restoring configuration.	option	-	enable
	Option	Description		
	enable	Enable reboot of system upon restoring configuration.		
	disable	Disable reboot of system upon restoring configuration.		
refresh	Statistics refresh interval second(s) in GUI.	integer	Minimum value: 0 Maximum value: 4294967295	0
remoteauthtimeout	Number of seconds that the FortiGate waits for responses from remote RADIUS, LDAP, or TACACS+ authentication servers..	integer	Minimum value: 1 Maximum value: 300	5
reset-sessionless-tcp	Action to perform if the FortiGate receives a TCP packet but cannot find a corresponding session in its session table. NAT/Route mode only.	option	-	disable
	Option	Description		
	enable	Enable reset session-less TCP.		
	disable	Disable reset session-less TCP.		
restart-time	Daily restart time (hh:mm).	user	Not Specified	
revision-backup-on-logout	Enable/disable back-up of the latest configuration revision when an administrator logs out of the CLI or GUI.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable revision config backup automatically when logout.		
	<i>disable</i>	Disable revision config backup automatically when logout.		
revision-image-auto-backup	Enable/disable back-up of the latest image revision after the firmware is upgraded.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable revision image backup automatically when upgrading image.		
	<i>disable</i>	Disable revision image backup automatically when upgrading image.		
scanunit-count	Number of scanunits. The range and the default depend on the number of CPUs. Only available on FortiGate units with multiple CPUs.	integer	Minimum value: 0 1 Maximum value: 8 **	
security-rating-result-submission	Enable/disable the submission of Security Rating results to FortiGuard.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable submission of Security Rating results to FortiGuard.		
	<i>disable</i>	Disable submission of Security Rating results to FortiGuard.		
security-rating-run-on-schedule	Enable/disable scheduled runs of Security Rating.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable scheduled runs of Security Rating.		
	<i>disable</i>	Disable scheduled runs of Security Rating.		

Parameter	Description	Type	Size	Default						
send-pmtu-icmp	Enable/disable sending of path maximum transmission unit (PMTU) - ICMP destination unreachable packet and to support PMTUD protocol on your network to reduce fragmentation of packets.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending of PMTU ICMP destination unreachable packet.</td></tr><tr><td><i>disable</i></td><td>Disable sending of PMTU ICMP destination unreachable packet.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending of PMTU ICMP destination unreachable packet.	<i>disable</i>	Disable sending of PMTU ICMP destination unreachable packet.			
Option	Description									
<i>enable</i>	Enable sending of PMTU ICMP destination unreachable packet.									
<i>disable</i>	Disable sending of PMTU ICMP destination unreachable packet.									
sflowd-max-children-num	Maximum number of sflowd child processes allowed to run.	integer	Minimum value: 0 Maximum value: 6 **	6 **						
show-backplane-intf *	show/hide backplane interfaces	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>show backplane interfaces</td></tr><tr><td><i>disable</i></td><td>hide backplane interfaces</td></tr></table>	Option	Description	<i>enable</i>	show backplane interfaces	<i>disable</i>	hide backplane interfaces			
Option	Description									
<i>enable</i>	show backplane interfaces									
<i>disable</i>	hide backplane interfaces									
snat-route-change	Enable/disable the ability to change the source NAT route.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SNAT route change.</td></tr><tr><td><i>disable</i></td><td>Disable SNAT route change.</td></tr></table>	Option	Description	<i>enable</i>	Enable SNAT route change.	<i>disable</i>	Disable SNAT route change.			
Option	Description									
<i>enable</i>	Enable SNAT route change.									
<i>disable</i>	Disable SNAT route change.									
special-file-23-support	Enable/disable detection of those special format files when using Data Leak Prevention.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable detection of those special format files when using Data Leak Prevention.</td></tr></table>	Option	Description	<i>disable</i>	Disable detection of those special format files when using Data Leak Prevention.					
Option	Description									
<i>disable</i>	Disable detection of those special format files when using Data Leak Prevention.									

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable detection of those special format files when using Data Leak Prevention.</td></tr></table>	Option	Description	<i>enable</i>	Enable detection of those special format files when using Data Leak Prevention.											
	Option	Description														
	<i>enable</i>	Enable detection of those special format files when using Data Leak Prevention.														
speedtest-server	Enable/disable speed test server.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable speed test server service.</td></tr><tr><td><i>disable</i></td><td>Disable speed test server service.</td></tr></table>	Option	Description	<i>enable</i>	Enable speed test server service.	<i>disable</i>	Disable speed test server service.									
	Option	Description														
	<i>enable</i>	Enable speed test server service.														
<i>disable</i>	Disable speed test server service.															
split-port *	Split port(s) to multiple 10Gbps ports.	string	Maximum length: 15													
ssd-trim-date *	Date within a month to run ssd trim.	integer	Minimum value: 1 1 Maximum value: 31													
ssd-trim-freq *	How often to run SSD Trim. SSD Trim prevents SSD drive data loss by finding and isolating errors.	option	-	weekly												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>never</i></td><td>Never Run SSD Trim.</td></tr><tr><td><i>hourly</i></td><td>Run SSD Trim Hourly.</td></tr><tr><td><i>daily</i></td><td>Run SSD Trim Daily.</td></tr><tr><td><i>weekly</i></td><td>Run SSD Trim Weekly.</td></tr><tr><td><i>monthly</i></td><td>Run SSD Trim Monthly.</td></tr></table>	Option	Description	<i>never</i>	Never Run SSD Trim.	<i>hourly</i>	Run SSD Trim Hourly.	<i>daily</i>	Run SSD Trim Daily.	<i>weekly</i>	Run SSD Trim Weekly.	<i>monthly</i>	Run SSD Trim Monthly.			
	Option	Description														
	<i>never</i>	Never Run SSD Trim.														
	<i>hourly</i>	Run SSD Trim Hourly.														
	<i>daily</i>	Run SSD Trim Daily.														
	<i>weekly</i>	Run SSD Trim Weekly.														
<i>monthly</i>	Run SSD Trim Monthly.															
ssd-trim-hour *	Hour of the day on which to run SSD Trim.	integer	Minimum value: 0 Maximum value: 23	1												
ssd-trim-min *	Minute of the hour on which to run SSD Trim.	integer	Minimum value: 0 Maximum value: 60	60												
ssd-trim-weekday *	Day of week to run SSD Trim.	option	-	sunday												

Parameter	Description	Type	Size	Default																																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sunday</i></td><td>Sunday</td></tr><tr><td><i>monday</i></td><td>Monday</td></tr><tr><td><i>tuesday</i></td><td>Tuesday</td></tr><tr><td><i>wednesday</i></td><td>Wednesday</td></tr><tr><td><i>thursday</i></td><td>Thursday</td></tr><tr><td><i>friday</i></td><td>Friday</td></tr><tr><td><i>saturday</i></td><td>Saturday</td></tr></table>	Option	Description	<i>sunday</i>	Sunday	<i>monday</i>	Monday	<i>tuesday</i>	Tuesday	<i>wednesday</i>	Wednesday	<i>thursday</i>	Thursday	<i>friday</i>	Friday	<i>saturday</i>	Saturday																					
	Option	Description																																				
	<i>sunday</i>	Sunday																																				
	<i>monday</i>	Monday																																				
	<i>tuesday</i>	Tuesday																																				
	<i>wednesday</i>	Wednesday																																				
	<i>thursday</i>	Thursday																																				
	<i>friday</i>	Friday																																				
<i>saturday</i>	Saturday																																					
ssh-enc-algo	Select one or more SSH ciphers.	option	-	chacha20-poly1305@openssh.com aes256-ctr aes256-gcm@openssh.com

Parameter	Description	Type	Size	Default						
ssl-static-key-ciphers	Enable/disable static key ciphers in SSL/TLS connections (e.g. AES128-SHA, AES256-SHA, AES128-SHA256, AES256-SHA256).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable static key ciphers in SSL/TLS connections.</td></tr><tr><td><i>disable</i></td><td>Disable static key ciphers in SSL/TLS connections.</td></tr></table>	Option	Description	<i>enable</i>	Enable static key ciphers in SSL/TLS connections.	<i>disable</i>	Disable static key ciphers in SSL/TLS connections.			
Option	Description									
<i>enable</i>	Enable static key ciphers in SSL/TLS connections.									
<i>disable</i>	Disable static key ciphers in SSL/TLS connections.									
sslvpn-ems-sn-check	Enable/disable verification of EMS serial number in SSL-VPN connection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of EMS serial number in SSL-VPN connection.</td></tr><tr><td><i>disable</i></td><td>Disable verification of EMS serial number in SSL-VPN connection.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of EMS serial number in SSL-VPN connection.	<i>disable</i>	Disable verification of EMS serial number in SSL-VPN connection.			
Option	Description									
<i>enable</i>	Enable verification of EMS serial number in SSL-VPN connection.									
<i>disable</i>	Disable verification of EMS serial number in SSL-VPN connection.									
sslvpn-max-worker-count	Maximum number of SSL-VPN processes. Upper limit for this value is the number of CPUs and depends on the model. Default value of zero means the SSLVPN daemon decides the number of worker processes.	integer	Minimum value: 0 Maximum value: 8 **							

Parameter	Description	Type	Size	Default						
strict-dirty-session-check	Enable to check the session against the original policy when revalidating. This can prevent dropping of redirected sessions when web-filtering and authentication are enabled together. If this option is enabled, the FortiGate unit deletes a session if a routing or policy change causes the session to no longer match the policy that originally allowed the session.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable strict dirty-session check.</td></tr><tr><td><i>disable</i></td><td>Disable strict dirty-session check.</td></tr></table>	Option	Description	<i>enable</i>	Enable strict dirty-session check.	<i>disable</i>	Disable strict dirty-session check.			
Option	Description									
<i>enable</i>	Enable strict dirty-session check.									
<i>disable</i>	Disable strict dirty-session check.									
strong-crypto	Enable to use strong encryption and only allow strong ciphers and digest for HTTPS/SSH/TLS/SSL functions.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable strong crypto for HTTPS/SSH/TLS/SSL.</td></tr><tr><td><i>disable</i></td><td>Disable strong crypto for HTTPS/SSH/TLS/SSL.</td></tr></table>	Option	Description	<i>enable</i>	Enable strong crypto for HTTPS/SSH/TLS/SSL.	<i>disable</i>	Disable strong crypto for HTTPS/SSH/TLS/SSL.			
Option	Description									
<i>enable</i>	Enable strong crypto for HTTPS/SSH/TLS/SSL.									
<i>disable</i>	Disable strong crypto for HTTPS/SSH/TLS/SSL.									
switch-controller *	Enable/disable switch controller feature. Switch controller allows you to manage FortiSwitch from the FortiGate itself.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable switch controller feature.</td></tr><tr><td><i>enable</i></td><td>Enable switch controller feature.</td></tr></table>	Option	Description	<i>disable</i>	Disable switch controller feature.	<i>enable</i>	Enable switch controller feature.			
Option	Description									
<i>disable</i>	Disable switch controller feature.									
<i>enable</i>	Enable switch controller feature.									

Parameter	Description	Type	Size	Default						
switch-controller-reserved-network *	Configure reserved network subnet for managed switches. This is available when the switch controller is enabled.	ipv4-classnet-host	Not Specified	10.255.0.1 255.255.0.0						
sys-perf-log-interval	Time in minutes between updates of performance statistics logging..	integer	Minimum value: 0 Maximum value: 15	5						
syslog-affinity *	Affinity setting for syslog (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0						
tcp-halfclose-timer	Number of seconds the FortiGate unit should wait to close a session after one peer has sent a FIN packet but the other has not responded.	integer	Minimum value: 1 Maximum value: 86400	120						
tcp-halfopen-timer	Number of seconds the FortiGate unit should wait to close a session after one peer has sent an open session packet but the other has not responded.	integer	Minimum value: 1 Maximum value: 86400	10						
tcp-option	Enable SACK, timestamp and MSS TCP options.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable TCP option.</td></tr><tr><td>disable</td><td>Disable TCP option.</td></tr></table>				Option	Description	enable	Enable TCP option.	disable	Disable TCP option.
Option	Description									
enable	Enable TCP option.									
disable	Disable TCP option.									
tcp-rst-timer	Length of the TCP CLOSE state in seconds.	integer	Minimum value: 5 Maximum value: 300	5						
tcp-timewait-timer	Length of the TCP TIME-WAIT state in seconds.	integer	Minimum value: 0 Maximum value: 300	1						
tftp	Enable/disable TFTP.	option	-	enable						

Parameter	Description	Type	Size	Default
-----------	-------------	------	------	---------

Option	Description
<i>enable</i>	Enable TFTP.
<i>disable</i>	Disable TFTP.

timezone	Number corresponding to your time zone from 00 to 86. Enter set timezone ? to view the list of time zones and the numbers that represent them.	option	-	00
----------	--	--------	---	----

user-device-store-max-devices	Maximum number of devices allowed in user device store.	integer	Minimum value: 84219 Maximum value: 240628 **	168439 **						
user-device-store-max-unified-mem	Maximum unified memory allowed in user device store.	integer	Minimum value: 168439644 Maximum value: 1684396441 **	842198220 **						
user-device-store-max-users	Maximum number of users allowed in user device store.	integer	Minimum value: 84219 Maximum value: 240628 **	168439 **						
vdom-mode *	Enable/disable support for multiple virtual domains (VDOMs).	option	-	no-vdom						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>no-vdom</td><td>Disable multiple VDOMs mode.</td></tr><tr><td>multi-vdom</td><td>Enable multiple VDOMs mode.</td></tr></table>				Option	Description	no-vdom	Disable multiple VDOMs mode.	multi-vdom	Enable multiple VDOMs mode.
Option	Description									
no-vdom	Disable multiple VDOMs mode.									
multi-vdom	Enable multiple VDOMs mode.									

Parameter	Description	Type	Size	Default						
vip-arp-range	Controls the number of ARPs that the FortiGate sends for a Virtual IP (VIP) address range.	option	-	restricted						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>unlimited</i></td><td>Send ARPs for all addresses in VIP range.</td></tr><tr><td><i>restricted</i></td><td>Send ARPs for the first 8192 addresses in VIP range.</td></tr></table>	Option	Description	<i>unlimited</i>	Send ARPs for all addresses in VIP range.	<i>restricted</i>	Send ARPs for the first 8192 addresses in VIP range.			
Option	Description									
<i>unlimited</i>	Send ARPs for all addresses in VIP range.									
<i>restricted</i>	Send ARPs for the first 8192 addresses in VIP range.									
virtual-switch-vlan *	Enable/disable virtual switch VLAN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable virtual switch VLAN.</td></tr><tr><td><i>disable</i></td><td>Disable virtual switch VLAN.</td></tr></table>	Option	Description	<i>enable</i>	Enable virtual switch VLAN.	<i>disable</i>	Disable virtual switch VLAN.			
Option	Description									
<i>enable</i>	Enable virtual switch VLAN.									
<i>disable</i>	Disable virtual switch VLAN.									
wad-affinity *	Affinity setting for wad (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0						
wad-csvc-cs-count	Number of concurrent WAD-cache-service object-cache processes.	integer	Minimum value: 1 Maximum value: 1	1						
wad-csvc-db-count	Number of concurrent WAD-cache-service byte-cache processes.	integer	Minimum value: 0 Maximum value: 8 **	0						
wad-memory-change-granularity	Minimum percentage change in system memory usage detected by the wad daemon prior to adjusting TCP window size for any active connection.	integer	Minimum value: 5 Maximum value: 25	10						
wad-restart-end-time	WAD workers daily restart end time (hh:mm).	user	Not Specified							
wad-restart-mode	WAD worker restart mode.	option	-	none						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Disable restart of WAD workers.</td></tr></table>	Option	Description	<i>none</i>	Disable restart of WAD workers.					
Option	Description									
<i>none</i>	Disable restart of WAD workers.									

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>time</i>	Enable daily restart of WAD workers.		
	<i>memory</i>	Enable restart of WAD workers based on memory usage.		
wad-restart-start-time	WAD workers daily restart time (hh:mm).	user	Not Specified	
wad-source-affinity	Enable/disable dispatching traffic to WAD workers based on source affinity.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable dispatching traffic to WAD workers based on source affinity.		
	<i>enable</i>	Enable dispatching traffic to WAD workers based on source affinity.		
wad-worker-count	Number of explicit proxy WAN optimization daemon (WAD) processes. By default WAN optimization, explicit proxy, and web caching is handled by all of the CPU cores in a FortiGate unit.	integer	Minimum value: 0 Maximum value: 8 **	0
wifi-ca-certificate	CA certificate that verifies the WiFi certificate.	string	Maximum length: 79	Fortinet_Wifi_CA
wifi-certificate	Certificate to use for WiFi authentication.	string	Maximum length: 35	Fortinet_Wifi
wimax-4g-usb	Enable/disable comparability with WiMAX 4G USB devices.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WiMax 4G.		
	<i>disable</i>	Disable WiMax 4G.		

Parameter	Description	Type	Size	Default
wireless-controller	Enable/disable the wireless controller feature to use the FortiGate unit to manage FortiAPs.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable wireless controller.		
	<i>disable</i>	Disable wireless controller.		
wireless-controller-port	Port used for the control channel in wireless controller mode.	integer	Minimum value: 1024 Maximum value: 49150	5246
wireless-mode *	Wireless mode setting.	option	-	ac
	<b>Option</b>	<b>Description</b>		
	<i>ac</i>	Wireless controller with local wireless.		
	<i>client</i>	Wireless client mode.		
	<i>fwfap</i>	Obsolete wireless AP mode.		

\* This parameter may not exist in some models.

\*\* Values may differ between models.

### config split-port-mode

Parameter	Description	Type	Size	Default
interface	Split port interface.	string	Maximum length: 15	
split-mode	The configuration mode for the split port interface.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable split.		
	<i>4x10G</i>	Split the port into four 10G ports.		
	<i>4x25G</i>	Split the port into four 25G ports.		
	<i>4x50G</i>	Split the port into four 50G ports.		
	<i>8x25G</i>	Split the port into eight 25G ports.		
	<i>8x50G</i>	Split the port into eight 50G ports.		
	<i>4x100G</i>	Split the port into four 100G ports.		
	<i>2x200G</i>	Split the port into two 200G ports.		

## config system gre-tunnel

Configure GRE tunnel.

```
config system gre-tunnel
  Description: Configure GRE tunnel.
  edit <name>
    set auto-asic-offload [enable|disable]
    set checksum-reception [disable|enable]
    set checksum-transmission [disable|enable]
    set diffservcode {user}
    set dscp-copying [disable|enable]
    set interface {string}
    set ip-version [4|6]
    set keepalive-failtimes {integer}
    set keepalive-interval {integer}
    set key-inbound {integer}
    set key-outbound {integer}
    set local-gw {ipv4-address-any}
    set local-gw6 {ipv6-address}
    set remote-gw {ipv4-address}
    set remote-gw6 {ipv6-address}
    set sequence-number-reception [disable|enable]
    set sequence-number-transmission [disable|enable]
    set use-sdwan [disable|enable]
  next
end
```

## config system gre-tunnel

Parameter	Description	Type	Size	Default
auto-asic-offload *	Enable/disable automatic ASIC offloading.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable automatic ASIC offloading.		
	<i>disable</i>	Disable automatic ASIC offloading.		
checksum-reception *	Enable/disable validating checksums in received GRE packets.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Do not validate checksums in received GRE packets.		
	<i>enable</i>	Validate checksums in received GRE packets.		
checksum-transmission *	Enable/disable including checksums in transmitted GRE packets.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not include checksums in transmitted GRE packets.</td></tr><tr><td><i>enable</i></td><td>Include checksums in transmitted GRE packets.</td></tr></table>	Option	Description	<i>disable</i>	Do not include checksums in transmitted GRE packets.	<i>enable</i>	Include checksums in transmitted GRE packets.			
	Option	Description								
	<i>disable</i>	Do not include checksums in transmitted GRE packets.								
<i>enable</i>	Include checksums in transmitted GRE packets.									
diffservcode	DiffServ setting to be applied to GRE tunnel outer IP header.	user	Not Specified							
dscp-copying	Enable/disable DSCP copying.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable DSCP copying.</td></tr><tr><td><i>enable</i></td><td>Enable DSCP copying.</td></tr></table>	Option	Description	<i>disable</i>	Disable DSCP copying.	<i>enable</i>	Enable DSCP copying.			
	Option	Description								
	<i>disable</i>	Disable DSCP copying.								
<i>enable</i>	Enable DSCP copying.									
interface	Interface name.	string	Maximum length: 15							
ip-version	IP version to use for VPN interface.	option	-	4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>4</td><td>Use IPv4 addressing for gateways.</td></tr><tr><td>6</td><td>Use IPv6 addressing for gateways.</td></tr></table>	Option	Description	4	Use IPv4 addressing for gateways.	6	Use IPv6 addressing for gateways.			
	Option	Description								
	4	Use IPv4 addressing for gateways.								
6	Use IPv6 addressing for gateways.									
keepalive-failtimes	Number of consecutive unreturned keepalive messages before a GRE connection is considered down.	integer	Minimum value: 1 Maximum value: 255	10						
keepalive-interval	Keepalive message interval.	integer	Minimum value: 0 Maximum value: 32767	0						
key-inbound *	Require received GRE packets contain this key.	integer	Minimum value: 0 Maximum value: 4294967295	0						
key-outbound *	Include this key in transmitted GRE packets.	integer	Minimum value: 0 Maximum value: 4294967295	0						

Parameter	Description	Type	Size	Default						
local-gw	IP address of the local gateway.	ipv4-address-any	Not Specified	0.0.0.0						
local-gw6	IPv6 address of the local gateway.	ipv6-address	Not Specified	::						
name	Tunnel name.	string	Maximum length: 15							
remote-gw	IP address of the remote gateway.	ipv4-address	Not Specified	0.0.0.0						
remote-gw6	IPv6 address of the remote gateway.	ipv6-address	Not Specified	::						
sequence-number-reception *	Enable/disable validating sequence numbers in received GRE packets.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not validate sequence number in received GRE packets.</td></tr><tr><td><i>enable</i></td><td>Validate sequence numbers in received GRE packets.</td></tr></table>				Option	Description	<i>disable</i>	Do not validate sequence number in received GRE packets.	<i>enable</i>	Validate sequence numbers in received GRE packets.
Option	Description									
<i>disable</i>	Do not validate sequence number in received GRE packets.									
<i>enable</i>	Validate sequence numbers in received GRE packets.									
sequence-number-transmission *	Enable/disable including of sequence numbers in transmitted GRE packets.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Include sequence numbers in transmitted GRE packets.</td></tr><tr><td><i>enable</i></td><td>Do not include sequence numbers in transmitted GRE packets.</td></tr></table>				Option	Description	<i>disable</i>	Include sequence numbers in transmitted GRE packets.	<i>enable</i>	Do not include sequence numbers in transmitted GRE packets.
Option	Description									
<i>disable</i>	Include sequence numbers in transmitted GRE packets.									
<i>enable</i>	Do not include sequence numbers in transmitted GRE packets.									
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of SD-WAN to reach remote gateway.</td></tr><tr><td><i>enable</i></td><td>Enable use of SD-WAN to reach remote gateway.</td></tr></table>				Option	Description	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.	<i>enable</i>	Enable use of SD-WAN to reach remote gateway.
Option	Description									
<i>disable</i>	Disable use of SD-WAN to reach remote gateway.									
<i>enable</i>	Enable use of SD-WAN to reach remote gateway.									

\* This parameter may not exist in some models.

## config system ha-monitor

Configure HA monitor.

```
config system ha-monitor
    Description: Configure HA monitor.
```

```

set monitor-vlan [enable|disable]
set vlan-hb-interval {integer}
set vlan-hb-lost-threshold {integer}
end

```

## config system ha-monitor

Parameter	Description	Type	Size	Default
monitor-vlan	Enable/disable monitor VLAN interfaces.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable monitor VLAN interfaces.		
	<i>disable</i>	Disable monitor VLAN interfaces.		
vlan-hb-interval	Configure heartbeat interval (seconds).	integer	Minimum value: 1 Maximum value: 30	5
vlan-hb-lost-threshold	VLAN lost heartbeat threshold.	integer	Minimum value: 1 Maximum value: 60	3

## config system ha

Configure HA.

```

config system ha
  Description: Configure HA.
  set arps {integer}
  set arps-interval {integer}
  set authentication [enable|disable]
  set cpu-threshold {user}
  set encryption [enable|disable]
  set failover-hold-time {integer}

## config system ha

Parameter	Description	Type	Size	Default						
arps	Number of gratuitous ARPs. Lower to reduce traffic. Higher to reduce failover time.	integer	Minimum value: 1 Maximum value: 60	5						
arps-interval	Time between gratuitous ARPs . Lower to reduce failover time. Higher to reduce traffic.	integer	Minimum value: 1 Maximum value: 20	8						
authentication	Enable/disable heartbeat message authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable heartbeat message authentication.</td></tr><tr><td><i>disable</i></td><td>Disable heartbeat message authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable heartbeat message authentication.	<i>disable</i>	Disable heartbeat message authentication.
Option	Description									
<i>enable</i>	Enable heartbeat message authentication.									
<i>disable</i>	Disable heartbeat message authentication.									
cpu-threshold	Dynamic weighted load balancing CPU usage weight and high and low thresholds.	user	Not Specified							
encryption	Enable/disable heartbeat message encryption.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable heartbeat message encryption.</td></tr><tr><td><i>disable</i></td><td>Disable heartbeat message encryption.</td></tr></table>	Option	Description	<i>enable</i>	Enable heartbeat message encryption.	<i>disable</i>	Disable heartbeat message encryption.			
	Option	Description								
	<i>enable</i>	Enable heartbeat message encryption.								
<i>disable</i>	Disable heartbeat message encryption.									
failover-hold-time	Time to wait before failover , to avoid flip.	integer	Minimum value: 0 Maximum value: 300	0						
ftp-proxy-threshold	Dynamic weighted load balancing weight and high and low number of FTP proxy sessions.	user	Not Specified							
gratuitous-arps	Enable/disable gratuitous ARPs. Disable if link-failed-signal enabled.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable gratuitous ARPs.</td></tr><tr><td><i>disable</i></td><td>Disable gratuitous ARPs.</td></tr></table>	Option	Description	<i>enable</i>	Enable gratuitous ARPs.	<i>disable</i>	Disable gratuitous ARPs.			
	Option	Description								
	<i>enable</i>	Enable gratuitous ARPs.								
<i>disable</i>	Disable gratuitous ARPs.									
group-id	HA group ID . Must be the same for all members.	integer	Minimum value: 0 Maximum value: 1023	0						
group-name	Cluster group name. Must be the same for all members.	string	Maximum length: 32							
ha-direct	Enable/disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.</td></tr><tr><td><i>disable</i></td><td>Disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.</td></tr></table>	Option	Description	<i>enable</i>	Enable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.	<i>disable</i>	Disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.			
	Option	Description								
	<i>enable</i>	Enable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.								
<i>disable</i>	Disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.									
ha-eth-type	HA heartbeat packet Ethertype (4-digit hex).	string	Maximum length: 4	8890						
ha-mgmt-status	Enable to reserve interfaces to manage individual cluster units.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
ha-uptime-diff-margin	Normally you would only reduce this value for failover testing.	integer	Minimum value: 1 Maximum value: 65535	300						
hb-interval	Time between sending heartbeat packets. Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 20	2						
hb-interval-in-milliseconds	Number of milliseconds for each heartbeat interval: 100ms or 10ms.	option	-	100ms						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>100ms</i></td><td>Each heartbeat interval is 100ms.</td></tr><tr><td><i>10ms</i></td><td>Each heartbeat interval is 10ms.</td></tr></table>				Option	Description	<i>100ms</i>	Each heartbeat interval is 100ms.	<i>10ms</i>	Each heartbeat interval is 10ms.
	Option	Description								
	<i>100ms</i>	Each heartbeat interval is 100ms.								
<i>10ms</i>	Each heartbeat interval is 10ms.									
hb-lost-threshold	Number of lost heartbeats to signal a failure. Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 60	6 **						
hbdev	Heartbeat interfaces. Must be the same for all members. Enter <interface> <priority> pairs to specify the priority of each heartbeat interface. Higher priority takes precedence.	user	Not Specified							
hc-eth-type	Transparent mode HA heartbeat packet Ethertype (4-digit hex).	string	Maximum length: 4	8891						
hello-holddown	Time to wait before changing from hello to work state.	integer	Minimum value: 5 Maximum value: 300	20						
http-proxy-threshold	Dynamic weighted load balancing weight and high and low number of HTTP proxy sessions.	user	Not Specified							
imap-proxy-threshold	Dynamic weighted load balancing weight and high and low number of IMAP proxy sessions.	user	Not Specified							
key	Key.	password	Not Specified							

Parameter	Description	Type	Size	Default						
l2ep-eth-type	Telnet session HA heartbeat packet Ethertype (4-digit hex).	string	Maximum length: 4	8893						
link-failed-signal	Enable to shut down all interfaces for 1 sec after a failover. Use if gratuitous ARPs do not update network.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
load-balance-all	Enable to load balance TCP sessions. Disable to load balance proxy sessions only.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable load balance.</td></tr><tr><td><i>disable</i></td><td>Disable load balance.</td></tr></table>	Option	Description	<i>enable</i>	Enable load balance.	<i>disable</i>	Disable load balance.			
Option	Description									
<i>enable</i>	Enable load balance.									
<i>disable</i>	Disable load balance.									
logical-sn	Enable/disable usage of the logical serial number.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable usage of the logical serial number.</td></tr><tr><td><i>disable</i></td><td>Disable usage of the logical serial number.</td></tr></table>	Option	Description	<i>enable</i>	Enable usage of the logical serial number.	<i>disable</i>	Disable usage of the logical serial number.			
Option	Description									
<i>enable</i>	Enable usage of the logical serial number.									
<i>disable</i>	Disable usage of the logical serial number.									
memory-based-failover	Enable/disable memory based failover.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
memory-compatible-mode	Enable/disable memory compatible mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default
memory-failover-flip-timeout	Time to wait between subsequent memory based failovers in minutes.	integer	Minimum value: 6 Maximum value: 2147483647	6
memory-failover-monitor-period	Duration of high memory usage before memory based failover is triggered in seconds.	integer	Minimum value: 1 Maximum value: 300	60
memory-failover-sample-rate	Rate at which memory usage is sampled in order to measure memory usage in seconds.	integer	Minimum value: 1 Maximum value: 60	1
memory-failover-threshold	Memory usage threshold to trigger memory based failover (0 means using conserve mode threshold in system.global).	integer	Minimum value: 0 Maximum value: 95	0
memory-threshold	Dynamic weighted load balancing memory usage weight and high and low thresholds.	user	Not Specified	
mode	HA mode. Must be the same for all members. FGSP requires standalone.	option	-	standalone
	Option	Description		
	standalone	Standalone mode.		
	a-a	Active-active mode.		
	a-p	Active-passive mode.		
monitor	Interfaces to check for port monitoring (or link failure).	user	Not Specified	
multicast-ttl	HA multicast TTL on primary.	integer	Minimum value: 5 Maximum value: 3600	600
nntp-proxy-threshold	Dynamic weighted load balancing weight and high and low number of NNTP proxy sessions.	user	Not Specified	
override	Enable and increase the priority of the unit that should always be primary (master).	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
override-wait-time	Delay negotiating if override is enabled. Reduces how often the cluster negotiates.	integer	Minimum value: 0 Maximum value: 3600	0						
password	Cluster password. Must be the same for all members.	password	Not Specified							
pingserver-failover-threshold	Remote IP monitoring failover threshold.	integer	Minimum value: 0 Maximum value: 50	0						
pingserver-flip-timeout	Time to wait in minutes before renegotiating after a remote IP monitoring failover.	integer	Minimum value: 6 Maximum value: 2147483647	60						
pingserver-monitor-interface	Interfaces to check for remote IP monitoring.	user	Not Specified							
pingserver-secondary-force-reset	Enable to force the cluster to negotiate after a remote IP monitoring failover.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable force reset of secondary member after PING server failure.</td></tr><tr><td><i>disable</i></td><td>Disable force reset of secondary member after PING server failure.</td></tr></table>				Option	Description	<i>enable</i>	Enable force reset of secondary member after PING server failure.	<i>disable</i>	Disable force reset of secondary member after PING server failure.
	Option	Description								
	<i>enable</i>	Enable force reset of secondary member after PING server failure.								
<i>disable</i>	Disable force reset of secondary member after PING server failure.									
pop3-proxy-threshold	Dynamic weighted load balancing weight and high and low number of POP3 proxy sessions.	user	Not Specified							
priority	Increase the priority to select the primary unit.	integer	Minimum value: 0 Maximum value: 255	128						
route-hold	Time to wait between routing table updates to the cluster.	integer	Minimum value: 0 Maximum value: 3600	10						

Parameter	Description	Type	Size	Default																
route-ttl	TTL for primary unit routes. Increase to maintain active routes during failover.	integer	Minimum value: 5 Maximum value: 3600	10																
route-wait	Time to wait before sending new routes to the cluster.	integer	Minimum value: 0 Maximum value: 3600	0																
schedule	Type of A-A load balancing. Use none if you have external load balancers.	option	-	round-robin																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>leastconnection</i></td><td>Least connection.</td></tr><tr><td><i>round-robin</i></td><td>Round robin.</td></tr><tr><td><i>weight-round-robin</i></td><td>Weight round robin.</td></tr><tr><td><i>random</i></td><td>Random.</td></tr><tr><td><i>ip</i></td><td>IP.</td></tr><tr><td><i>ipport</i></td><td>IP port.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>leastconnection</i>	Least connection.	<i>round-robin</i>	Round robin.	<i>weight-round-robin</i>	Weight round robin.	<i>random</i>	Random.	<i>ip</i>	IP.	<i>ipport</i>	IP port.
Option	Description																			
<i>none</i>	None.																			
<i>leastconnection</i>	Least connection.																			
<i>round-robin</i>	Round robin.																			
<i>weight-round-robin</i>	Weight round robin.																			
<i>random</i>	Random.																			
<i>ip</i>	IP.																			
<i>ipport</i>	IP port.																			
session-pickup	Enable/disable session pickup. Enabling it can reduce session down time when fail over happens.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable session pickup.</td></tr><tr><td><i>disable</i></td><td>Disable session pickup.</td></tr></table>				Option	Description	<i>enable</i>	Enable session pickup.	<i>disable</i>	Disable session pickup.										
Option	Description																			
<i>enable</i>	Enable session pickup.																			
<i>disable</i>	Disable session pickup.																			
session-pickup-connectionless	Enable/disable UDP and ICMP session sync.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.										
Option	Description																			
<i>enable</i>	Enable setting.																			
<i>disable</i>	Disable setting.																			
session-pickup-delay	Enable to sync sessions longer than 30 sec. Only longer lived sessions need to be synced.	option	-	disable																

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
session-pickup-expectation	Enable/disable session helper expectation session sync for FGSP.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
session-pickup-nat	Enable/disable NAT session sync for FGSP.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
session-sync-dev	Offload session-sync process to kernel and sync sessions using connected interface(s) directly.	user	Not Specified	
smtp-proxy-threshold	Dynamic weighted load balancing weight and high and low number of SMTP proxy sessions.	user	Not Specified	
ssd-failover *	Enable/disable automatic HA failover on SSD disk failure.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
standalone-config-sync	Enable/disable FGSP configuration synchronization.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
standalone-mgmt-vdom	Enable/disable standalone management VDOM.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
sync-config	Enable/disable configuration synchronization.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable configuration synchronization.		
	<i>disable</i>	Disable configuration synchronization.		
sync-packet-balance	Enable/disable HA packet distribution to multiple CPUs.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable HA packet distribution to multiple CPUs.		
	<i>disable</i>	Disable HA packet distribution to multiple CPUs.		
unicast-gateway *	Default route gateway for unicast interface.	ipv4-address	Not Specified	0.0.0.0
unicast-hb *	Enable/disable unicast heartbeat.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
unicast-hb-netmask *	Unicast heartbeat netmask.	ipv4-netmask	Not Specified	0.0.0.0
unicast-hb-peerip *	Unicast heartbeat peer IP.	ipv4-address	Not Specified	0.0.0.0
unicast-status *	Enable/disable unicast connection.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
uninterruptible-primary-wait	Number of minutes the primary HA unit waits before the secondary HA unit is considered upgraded and the system is started before starting its own upgrade.	integer	Minimum value: 15 Maximum value: 300	30

Parameter	Description	Type	Size	Default
uninterruptible-upgrade	Enable to upgrade a cluster without blocking network traffic.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
vcluster-status	Enable/disable virtual cluster for virtual clustering.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
weight	Weight-round-robin weight for each cluster unit. Syntax <priority> <weight>.	user	Not Specified	0 40

\* This parameter may not exist in some models.

\*\* Values may differ between models.

### config ha-mgmt-interfaces

Parameter	Description	Type	Size	Default
id	Table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface to reserve for HA management.	string	Maximum length: 15	
dst	Default route destination for reserved HA management interface.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
gateway	Default route gateway for reserved HA management interface.	ipv4-address	Not Specified	0.0.0.0
gateway6	Default IPv6 gateway for reserved HA management interface.	ipv6-address	Not Specified	::

## config unicast-peers

Parameter	Description	Type	Size	Default
id	Table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
peer-ip	Unicast peer IP.	ipv4-address	Not Specified	0.0.0.0

## config vcluster

Parameter	Description	Type	Size	Default
vcluster-id	ID.	integer	Minimum value: 1 Maximum value: 30	1
override	Enable and increase the priority of the unit that should always be primary (master).	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
priority	Increase the priority to select the primary unit.	integer	Minimum value: 0 Maximum value: 255	128
override-wait-time	Delay negotiating if override is enabled. Reduces how often the cluster negotiates.	integer	Minimum value: 0 Maximum value: 3600	0
monitor	Interfaces to check for port monitoring (or link failure).	user	Not Specified	
pingserver-monitor-interface	Interfaces to check for remote IP monitoring.	user	Not Specified	
pingserver-failover-threshold	Remote IP monitoring failover threshold.	integer	Minimum value: 0 Maximum value: 50	0

Parameter	Description	Type	Size	Default						
pingserver-secondary-force-reset	Enable to force the cluster to negotiate after a remote IP monitoring failover.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable force reset of secondary member after PING server failure.</td></tr><tr><td><i>disable</i></td><td>Disable force reset of secondary member after PING server failure.</td></tr></table>				Option	Description	<i>enable</i>	Enable force reset of secondary member after PING server failure.	<i>disable</i>	Disable force reset of secondary member after PING server failure.
	Option	Description								
	<i>enable</i>	Enable force reset of secondary member after PING server failure.								
<i>disable</i>	Disable force reset of secondary member after PING server failure.									
vdom <name>	Virtual domain(s) in the virtual cluster. Virtual domain name.	string	Maximum length: 79

	<i>ftm</i>	FTM access.		
	<i>speed-test</i>	Speed test access.		
ap-discover	Enable/disable automatic registration of unknown FortiAP devices.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable automatic registration of unknown FortiAP devices.		
	<i>disable</i>	Disable automatic registration of unknown FortiAP devices.		
arpforward	Enable/disable ARP forwarding.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable ARP forwarding.		
	<i>disable</i>	Disable ARP forwarding.		
atm-protocol *	ATM protocol.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	Not over ATM.		
	<i>ipoa</i>	IPoA RFC2684.		
auth-cert	HTTPS server certificate.	string	Maximum length: 35	
auth-portal-addr	Address of captive portal.	string	Maximum length: 63	
auth-type	PPP authentication type to use.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Automatically choose authentication.		
	<i>pap</i>	PAP authentication.		
	<i>chap</i>	CHAP authentication.		
	<i>mschapv1</i>	MS-CHAPv1 authentication.		
	<i>mschapv2</i>	MS-CHAPv2 authentication.		
auto-auth-extension-device	Enable/disable automatic authorization of dedicated Fortinet extension device on this interface.	option	-	disable

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic authorization of dedicated Fortinet extension device on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable automatic authorization of dedicated Fortinet extension device on this interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device on this interface.	<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device on this interface.					
	Option	Description										
	<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device on this interface.										
<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device on this interface.											
bandwidth-measure-time	Bandwidth measure time.	integer	Minimum value: 0 Maximum value: 4294967295	0								
bfd	Bidirectional Forwarding Detection (BFD) settings.	option	-	global								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>BFD behavior of this interface will be based on global configuration.</td></tr><tr><td><i>enable</i></td><td>Enable BFD on this interface and ignore global configuration.</td></tr><tr><td><i>disable</i></td><td>Disable BFD on this interface and ignore global configuration.</td></tr></table>	Option	Description	<i>global</i>	BFD behavior of this interface will be based on global configuration.	<i>enable</i>	Enable BFD on this interface and ignore global configuration.	<i>disable</i>	Disable BFD on this interface and ignore global configuration.			
	Option	Description										
	<i>global</i>	BFD behavior of this interface will be based on global configuration.										
	<i>enable</i>	Enable BFD on this interface and ignore global configuration.										
<i>disable</i>	Disable BFD on this interface and ignore global configuration.											
bfd-desired-min-tx	BFD desired minimal transmit interval.	integer	Minimum value: 1 Maximum value: 100000	250								
bfd-detect-mult	BFD detection multiplier.	integer	Minimum value: 1 Maximum value: 50	3								
bfd-required-min-rx	BFD required minimal receive interval.	integer	Minimum value: 1 Maximum value: 100000	250								
broadcast-forward	Enable/disable broadcast forwarding.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable broadcast forwarding.</td></tr><tr><td><i>disable</i></td><td>Disable broadcast forwarding.</td></tr></table>	Option	Description	<i>enable</i>	Enable broadcast forwarding.	<i>disable</i>	Disable broadcast forwarding.					
	Option	Description										
	<i>enable</i>	Enable broadcast forwarding.										
<i>disable</i>	Disable broadcast forwarding.											

Parameter	Description	Type	Size	Default								
cli-conn-status	CLI connection status.	integer	Minimum value: 0 Maximum value: 4294967295	0								
color	Color of icon on the GUI.	integer	Minimum value: 0 Maximum value: 32	0								
dedicated-to	Configure interface for single purpose.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Interface not dedicated for any purpose.</td></tr><tr><td><i>management</i></td><td>Dedicate this interface for management purposes only.</td></tr></table>				Option	Description	<i>none</i>	Interface not dedicated for any purpose.	<i>management</i>	Dedicate this interface for management purposes only.		
Option	Description											
<i>none</i>	Interface not dedicated for any purpose.											
<i>management</i>	Dedicate this interface for management purposes only.											
defaultgw	Enable to get the gateway IP from the DHCP or PPPoE server.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable default gateway.</td></tr><tr><td><i>disable</i></td><td>Disable default gateway.</td></tr></table>				Option	Description	<i>enable</i>	Enable default gateway.	<i>disable</i>	Disable default gateway.		
Option	Description											
<i>enable</i>	Enable default gateway.											
<i>disable</i>	Disable default gateway.											
description	Description.	var-string	Maximum length: 255									
detected-peer-mtu	MTU of detected peer.	integer	Minimum value: 0 Maximum value: 4294967295	0								
detectprotocol	Protocols used to detect the server.	option	-	ping								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING.</td></tr><tr><td><i>tcp-echo</i></td><td>TCP echo.</td></tr><tr><td><i>udp-echo</i></td><td>UDP echo.</td></tr></table>				Option	Description	<i>ping</i>	PING.	<i>tcp-echo</i>	TCP echo.	<i>udp-echo</i>	UDP echo.
Option	Description											
<i>ping</i>	PING.											
<i>tcp-echo</i>	TCP echo.											
<i>udp-echo</i>	UDP echo.											
detectserver	Gateway's ping server for this IP.	user	Not Specified									
device-identification	Enable/disable passively gathering of device identity information about the devices on the network connected to this interface.	option	-	disable								

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable passive gathering of identity information about hosts.</td></tr><tr><td><i>disable</i></td><td>Disable passive gathering of identity information about hosts.</td></tr></table>	Option	Description	<i>enable</i>	Enable passive gathering of identity information about hosts.	<i>disable</i>	Disable passive gathering of identity information about hosts.			
	Option	Description								
	<i>enable</i>	Enable passive gathering of identity information about hosts.								
<i>disable</i>	Disable passive gathering of identity information about hosts.									
device-user-identification	Enable/disable passive gathering of user identity information about users on this interface.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable passive gathering of user identity information about users.</td></tr><tr><td><i>disable</i></td><td>Disable passive gathering of user identity information about users.</td></tr></table>	Option	Description	<i>enable</i>	Enable passive gathering of user identity information about users.	<i>disable</i>	Disable passive gathering of user identity information about users.			
	Option	Description								
	<i>enable</i>	Enable passive gathering of user identity information about users.								
<i>disable</i>	Disable passive gathering of user identity information about users.									
devindex	Device Index.	integer	Minimum value: 0 Maximum value: 4294967295	0						
dhcp-classless-route-addition	Enable/disable addition of classless static routes retrieved from DHCP server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable addition of classless static routes retrieved from DHCP server.</td></tr><tr><td><i>disable</i></td><td>Disable addition of classless static routes retrieved from DHCP server.</td></tr></table>	Option	Description	<i>enable</i>	Enable addition of classless static routes retrieved from DHCP server.	<i>disable</i>	Disable addition of classless static routes retrieved from DHCP server.			
	Option	Description								
	<i>enable</i>	Enable addition of classless static routes retrieved from DHCP server.								
<i>disable</i>	Disable addition of classless static routes retrieved from DHCP server.									
dhcp-client-identifier	DHCP client identifier.	string	Maximum length: 48							
dhcp-relay-agent-option	Enable/disable DHCP relay agent option.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP relay agent option.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP relay agent option.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCP relay agent option.	<i>disable</i>	Disable DHCP relay agent option.			
	Option	Description								
	<i>enable</i>	Enable DHCP relay agent option.								
<i>disable</i>	Disable DHCP relay agent option.									
dhcp-relay-interface	Specify outgoing interface to reach server.	string	Maximum length: 15							
dhcp-relay-interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto						

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.			
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
dhcp-relay-ip	DHCP relay IP address.	user	Not Specified									
dhcp-relay-link-selection	DHCP relay link selection.	ipv4-address	Not Specified	0.0.0.0								
dhcp-relay-request-all-server	Enable/disable sending of DHCP requests to all servers.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Send DHCP requests only to a matching server.</td></tr><tr><td><i>enable</i></td><td>Send DHCP requests to all servers.</td></tr></table>	Option	Description	<i>disable</i>	Send DHCP requests only to a matching server.	<i>enable</i>	Send DHCP requests to all servers.					
	Option	Description										
	<i>disable</i>	Send DHCP requests only to a matching server.										
<i>enable</i>	Send DHCP requests to all servers.											
dhcp-relay-service	Enable/disable allowing this interface to act as a DHCP relay.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>None.</td></tr><tr><td><i>enable</i></td><td>DHCP relay agent.</td></tr></table>	Option	Description	<i>disable</i>	None.	<i>enable</i>	DHCP relay agent.					
	Option	Description										
	<i>disable</i>	None.										
<i>enable</i>	DHCP relay agent.											
dhcp-relay-type	DHCP relay type (regular or IPsec).	option	-	regular								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>regular</i></td><td>Regular DHCP relay.</td></tr><tr><td><i>ipsec</i></td><td>DHCP relay for IPsec.</td></tr></table>	Option	Description	<i>regular</i>	Regular DHCP relay.	<i>ipsec</i>	DHCP relay for IPsec.					
	Option	Description										
	<i>regular</i>	Regular DHCP relay.										
<i>ipsec</i>	DHCP relay for IPsec.											
dhcp-renew-time	DHCP renew time in seconds , 0 means use the renew time provided by the server.	integer	Minimum value: 300 Maximum value: 604800	0								
disc-retry-timeout	Time in seconds to wait before retrying to start a PPPoE discovery, 0 means no timeout.	integer	Minimum value: 0 Maximum value: 4294967295	1								

Parameter	Description	Type	Size	Default								
disconnect-threshold	Time in milliseconds to wait before sending a notification that this interface is down or disconnected.	integer	Minimum value: 0 Maximum value: 10000	0								
distance	Distance for routes learned through PPPoE or DHCP, lower distance indicates preferred route.	integer	Minimum value: 1 Maximum value: 255	5								
dns-server-override	Enable/disable use DNS acquired by DHCP or PPPoE.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Use DNS acquired by DHCP or PPPoE.</td></tr><tr><td>disable</td><td>No not use DNS acquired by DHCP or PPPoE.</td></tr></table>				Option	Description	enable	Use DNS acquired by DHCP or PPPoE.	disable	No not use DNS acquired by DHCP or PPPoE.		
	Option	Description										
	enable	Use DNS acquired by DHCP or PPPoE.										
disable	No not use DNS acquired by DHCP or PPPoE.											
dns-server-protocol	DNS transport protocols.	option	-	cleartext								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cleartext</td><td>DNS over UDP/53, DNS over TCP/53.</td></tr><tr><td>dot</td><td>DNS over TLS/853.</td></tr><tr><td>doh</td><td>DNS over HTTPS/443.</td></tr></table>				Option	Description	cleartext	DNS over UDP/53, DNS over TCP/53.	dot	DNS over TLS/853.	doh	DNS over HTTPS/443.
	Option	Description										
	cleartext	DNS over UDP/53, DNS over TCP/53.										
	dot	DNS over TLS/853.										
doh	DNS over HTTPS/443.											
drop-fragment	Enable/disable drop fragment packets.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable/disable drop fragment packets.</td></tr><tr><td>disable</td><td>Do not drop fragment packets.</td></tr></table>				Option	Description	enable	Enable/disable drop fragment packets.	disable	Do not drop fragment packets.		
	Option	Description										
	enable	Enable/disable drop fragment packets.										
disable	Do not drop fragment packets.											
drop-overlapped-fragment	Enable/disable drop overlapped fragment packets.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable drop of overlapped fragment packets.</td></tr><tr><td>disable</td><td>Disable drop of overlapped fragment packets.</td></tr></table>				Option	Description	enable	Enable drop of overlapped fragment packets.	disable	Disable drop of overlapped fragment packets.		
	Option	Description										
	enable	Enable drop of overlapped fragment packets.										
disable	Disable drop of overlapped fragment packets.											
eap-ca-cert	EAP CA certificate name.	string	Maximum length: 79									
eap-identity	EAP identity.	string	Maximum length: 35									

Parameter	Description	Type	Size	Default																				
eap-method	EAP method.	option	-																					
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls</i></td><td>TLS.</td></tr><tr><td><i>peap</i></td><td>PEAP.</td></tr></table>	Option	Description	<i>tls</i>	TLS.	<i>peap</i>	PEAP.																	
	Option	Description																						
	<i>tls</i>	TLS.																						
<i>peap</i>	PEAP.																							
eap-password	EAP password.	password	Not Specified																					
eap-suppliant	Enable/disable EAP-Suppliant.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAP Suppliant.</td></tr><tr><td><i>disable</i></td><td>Disable EAP Suppliant.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAP Suppliant.	<i>disable</i>	Disable EAP Suppliant.																	
	Option	Description																						
	<i>enable</i>	Enable EAP Suppliant.																						
<i>disable</i>	Disable EAP Suppliant.																							
eap-user-cert	EAP user certificate name.	string	Maximum length: 35																					
egress-cos *	Override outgoing CoS in user VLAN tag.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>cos0</i></td><td>CoS 0.</td></tr><tr><td><i>cos1</i></td><td>CoS 1.</td></tr><tr><td><i>cos2</i></td><td>CoS 2.</td></tr><tr><td><i>cos3</i></td><td>CoS 3.</td></tr><tr><td><i>cos4</i></td><td>CoS 4.</td></tr><tr><td><i>cos5</i></td><td>CoS 5.</td></tr><tr><td><i>cos6</i></td><td>CoS 6.</td></tr><tr><td><i>cos7</i></td><td>CoS 7.</td></tr></table>	Option	Description	<i>disable</i>	Disable.	<i>cos0</i>	CoS 0.	<i>cos1</i>	CoS 1.	<i>cos2</i>	CoS 2.	<i>cos3</i>	CoS 3.	<i>cos4</i>	CoS 4.	<i>cos5</i>	CoS 5.	<i>cos6</i>	CoS 6.	<i>cos7</i>	CoS 7.			
	Option	Description																						
	<i>disable</i>	Disable.																						
	<i>cos0</i>	CoS 0.																						
	<i>cos1</i>	CoS 1.																						
	<i>cos2</i>	CoS 2.																						
	<i>cos3</i>	CoS 3.																						
	<i>cos4</i>	CoS 4.																						
	<i>cos5</i>	CoS 5.																						
<i>cos6</i>	CoS 6.																							
<i>cos7</i>	CoS 7.																							
egress-shaping-profile	Outgoing traffic shaping profile.	string	Maximum length: 35																					
estimated-downstream-bandwidth	Estimated maximum downstream bandwidth (kbps). Used to estimate link utilization.	integer	Minimum value: 0 Maximum value: 4294967295	0																				

Parameter	Description	Type	Size	Default								
estimated-upstream-bandwidth	Estimated maximum upstream bandwidth (kbps). Used to estimate link utilization.	integer	Minimum value: 0 Maximum value: 4294967295	0								
explicit-ftp-proxy	Enable/disable the explicit FTP proxy on this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable explicit FTP proxy on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable explicit FTP proxy on this interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable explicit FTP proxy on this interface.	<i>disable</i>	Disable explicit FTP proxy on this interface.					
Option	Description											
<i>enable</i>	Enable explicit FTP proxy on this interface.											
<i>disable</i>	Disable explicit FTP proxy on this interface.											
explicit-web-proxy	Enable/disable the explicit web proxy on this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable explicit Web proxy on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable explicit Web proxy on this interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable explicit Web proxy on this interface.	<i>disable</i>	Disable explicit Web proxy on this interface.					
Option	Description											
<i>enable</i>	Enable explicit Web proxy on this interface.											
<i>disable</i>	Disable explicit Web proxy on this interface.											
external	Enable/disable identifying the interface as an external interface (which usually means it's connected to the Internet).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable identifying the interface as an external interface.</td></tr><tr><td><i>disable</i></td><td>Disable identifying the interface as an external interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable identifying the interface as an external interface.	<i>disable</i>	Disable identifying the interface as an external interface.					
Option	Description											
<i>enable</i>	Enable identifying the interface as an external interface.											
<i>disable</i>	Disable identifying the interface as an external interface.											
fail-action-on-extender	Action on FortiExtender when interface fail.	option	-	soft-restart								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>soft-restart</i></td><td>Soft-restart-on-extender.</td></tr><tr><td><i>hard-restart</i></td><td>Hard-restart-on-extender.</td></tr><tr><td><i>reboot</i></td><td>Reboot-on-extender.</td></tr></table>	Option	Description	<i>soft-restart</i>	Soft-restart-on-extender.	<i>hard-restart</i>	Hard-restart-on-extender.	<i>reboot</i>	Reboot-on-extender.			
Option	Description											
<i>soft-restart</i>	Soft-restart-on-extender.											
<i>hard-restart</i>	Hard-restart-on-extender.											
<i>reboot</i>	Reboot-on-extender.											
fail-alert-interfaces <name>	Names of the FortiGate interfaces to which the link failure alert is sent. Names of the non-virtual interface.	string	Maximum length: 15									
fail-alert-method	Select link-failed-signal or link-down method to alert about a failed link.	option	-	link-down								

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>link-failed-signal</i></td><td>Link-failed-signal.</td></tr><tr><td><i>link-down</i></td><td>Link-down.</td></tr></table>	Option	Description	<i>link-failed-signal</i>	Link-failed-signal.	<i>link-down</i>	Link-down.			
	Option	Description								
	<i>link-failed-signal</i>	Link-failed-signal.								
<i>link-down</i>	Link-down.									
fail-detect	Enable/disable fail detection features for this interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable interface failed option status.</td></tr><tr><td><i>disable</i></td><td>Disable interface failed option status.</td></tr></table>	Option	Description	<i>enable</i>	Enable interface failed option status.	<i>disable</i>	Disable interface failed option status.			
	Option	Description								
	<i>enable</i>	Enable interface failed option status.								
<i>disable</i>	Disable interface failed option status.									
fail-detect-option	Options for detecting that this interface has failed.	option	-	link-down						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>detectserver</i></td><td>Use a ping server to determine if the interface has failed.</td></tr><tr><td><i>link-down</i></td><td>Use port detection to determine if the interface has failed.</td></tr></table>	Option	Description	<i>detectserver</i>	Use a ping server to determine if the interface has failed.	<i>link-down</i>	Use port detection to determine if the interface has failed.			
	Option	Description								
	<i>detectserver</i>	Use a ping server to determine if the interface has failed.								
<i>link-down</i>	Use port detection to determine if the interface has failed.									
fortilink *	Enable FortiLink to dedicate this interface to manage other Fortinet devices.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiLink to dedicated interface for managing FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable FortiLink to dedicated interface for managing FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiLink to dedicated interface for managing FortiSwitch devices.	<i>disable</i>	Disable FortiLink to dedicated interface for managing FortiSwitch devices.			
	Option	Description								
	<i>enable</i>	Enable FortiLink to dedicated interface for managing FortiSwitch devices.								
<i>disable</i>	Disable FortiLink to dedicated interface for managing FortiSwitch devices.									
fortilink-backup-link	FortiLink split interface backup link.	integer	Minimum value: 0 Maximum value: 255	0						
fortilink-neighbor-detect	Protocol for FortiGate neighbor discovery.	option	-	fortilink						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>lldp</i></td><td>Detect FortiLink neighbors using LLDP protocol.</td></tr><tr><td><i>fortilink</i></td><td>Detect FortiLink neighbors using FortiLink protocol.</td></tr></table>	Option	Description	<i>lldp</i>	Detect FortiLink neighbors using LLDP protocol.	<i>fortilink</i>	Detect FortiLink neighbors using FortiLink protocol.			
	Option	Description								
	<i>lldp</i>	Detect FortiLink neighbors using LLDP protocol.								
<i>fortilink</i>	Detect FortiLink neighbors using FortiLink protocol.									
fortilink-split-interface	Enable/disable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.	option	-	enable						

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.</td></tr><tr><td><i>disable</i></td><td>Disable FortiLink split interface.</td></tr></table>				Option	Description	<i>enable</i>	Enable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.	<i>disable</i>	Disable FortiLink split interface.						
	Option	Description														
	<i>enable</i>	Enable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.														
<i>disable</i>	Disable FortiLink split interface.															
forward-domain	Transparent mode forward domain.	integer	Minimum value: 0 Maximum value: 2147483647	0												
forward-error-correction *	Configure forward error correction (FEC).	option	-	none												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>none</td></tr><tr><td><i>disable</i></td><td>Disable forward error correction (FEC).</td></tr><tr><td><i>cl91-rs-fec</i></td><td>Reed-Solomon (FEC CL91).</td></tr><tr><td><i>cl74-fc-fec</i></td><td>Fire-Code (FEC CL74).</td></tr><tr><td><i>auto</i></td><td>Negotiate forward error correction (FEC).</td></tr></table>				Option	Description	<i>none</i>	none	<i>disable</i>	Disable forward error correction (FEC).	<i>cl91-rs-fec</i>	Reed-Solomon (FEC CL91).	<i>cl74-fc-fec</i>	Fire-Code (FEC CL74).	<i>auto</i>	Negotiate forward error correction (FEC).
	Option	Description														
	<i>none</i>	none														
	<i>disable</i>	Disable forward error correction (FEC).														
	<i>cl91-rs-fec</i>	Reed-Solomon (FEC CL91).														
	<i>cl74-fc-fec</i>	Fire-Code (FEC CL74).														
<i>auto</i>	Negotiate forward error correction (FEC).															
gateway-address *	Gateway address.	ipv4-address	Not Specified	0.0.0.0												
gwaddr *	Gateway address.	ipv4-address	Not Specified	0.0.0.0												
gwdetect	Enable/disable detect gateway alive for first.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable detect gateway alive for first.</td></tr><tr><td><i>disable</i></td><td>Disable detect gateway alive for first.</td></tr></table>				Option	Description	<i>enable</i>	Enable detect gateway alive for first.	<i>disable</i>	Disable detect gateway alive for first.						
	Option	Description														
	<i>enable</i>	Enable detect gateway alive for first.														
<i>disable</i>	Disable detect gateway alive for first.															
ha-priority	HA election priority for the PING server.	integer	Minimum value: 1 Maximum value: 50	1												
icmp-accept-redirect	Enable/disable ICMP accept redirect.	option	-	enable												

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ICMP accept redirect.</td></tr><tr><td><i>disable</i></td><td>Disable ICMP accept redirect.</td></tr></table>	Option	Description	<i>enable</i>	Enable ICMP accept redirect.	<i>disable</i>	Disable ICMP accept redirect.							
	Option	Description												
	<i>enable</i>	Enable ICMP accept redirect.												
<i>disable</i>	Disable ICMP accept redirect.													
icmp-send-redirect	Enable/disable sending of ICMP redirects.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending of ICMP redirects.</td></tr><tr><td><i>disable</i></td><td>Disable sending of ICMP redirects.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending of ICMP redirects.	<i>disable</i>	Disable sending of ICMP redirects.							
	Option	Description												
	<i>enable</i>	Enable sending of ICMP redirects.												
<i>disable</i>	Disable sending of ICMP redirects.													
ident-accept	Enable/disable authentication for this interface.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable determining a user's identity from packet identification.</td></tr><tr><td><i>disable</i></td><td>Disable determining a user's identity from packet identification.</td></tr></table>	Option	Description	<i>enable</i>	Enable determining a user's identity from packet identification.	<i>disable</i>	Disable determining a user's identity from packet identification.							
	Option	Description												
	<i>enable</i>	Enable determining a user's identity from packet identification.												
<i>disable</i>	Disable determining a user's identity from packet identification.													
idle-timeout	PPPoE auto disconnect after idle timeout seconds, 0 means no timeout.	integer	Minimum value: 0 Maximum value: 32767	0										
ike-saml-server	Configure IKE authentication SAML server.	string	Maximum length: 35											
inbandwidth	Bandwidth limit for incoming traffic , 0 means unlimited.	integer	Minimum value: 0 Maximum value: 80000000 **	0										
ingress-cos *	Override incoming CoS in user VLAN tag on VLAN interface or assign a priority VLAN tag on physical interface.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>cos0</i></td><td>CoS 0.</td></tr><tr><td><i>cos1</i></td><td>CoS 1.</td></tr><tr><td><i>cos2</i></td><td>CoS 2.</td></tr></table>	Option	Description	<i>disable</i>	Disable.	<i>cos0</i>	CoS 0.	<i>cos1</i>	CoS 1.	<i>cos2</i>	CoS 2.			
	Option	Description												
	<i>disable</i>	Disable.												
	<i>cos0</i>	CoS 0.												
	<i>cos1</i>	CoS 1.												
<i>cos2</i>	CoS 2.													

Parameter	Description	Type	Size	Default													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cos3</td><td>CoS 3.</td></tr><tr><td>cos4</td><td>CoS 4.</td></tr><tr><td>cos5</td><td>CoS 5.</td></tr><tr><td>cos6</td><td>CoS 6.</td></tr><tr><td>cos7</td><td>CoS 7.</td></tr></table>		Option	Description	cos3	CoS 3.	cos4	CoS 4.	cos5	CoS 5.	cos6	CoS 6.	cos7	CoS 7.			
	Option	Description															
	cos3	CoS 3.															
	cos4	CoS 4.															
	cos5	CoS 5.															
	cos6	CoS 6.															
cos7	CoS 7.																
ingress-shaping-profile	Incoming traffic shaping profile.	string	Maximum length: 35														
ingress-spillover-threshold	Ingress Spillover threshold , 0 means unlimited.	integer	Minimum value: 0 Maximum value: 16776000	0													
interconnect-profile *	Set interconnect profile.	option	-	default													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>default interconnect profile</td></tr><tr><td>profile1</td><td>interconnect profile1 [(10G &amp; IC &gt; 7m/20db-loss) or (25G/27G &amp; IC &lt; 1m)]</td></tr><tr><td>profile2</td><td>interconnect profile2 [(27G in AP (106G) Auto Profile)]</td></tr></table>		Option	Description	default	default interconnect profile	profile1	interconnect profile1 [(10G & IC > 7m/20db-loss) or (25G/27G & IC < 1m)]	profile2	interconnect profile2 [(27G in AP (106G) Auto Profile)]							
	Option	Description															
	default	default interconnect profile															
	profile1	interconnect profile1 [(10G & IC > 7m/20db-loss) or (25G/27G & IC < 1m)]															
profile2	interconnect profile2 [(27G in AP (106G) Auto Profile)]																
interface	Interface name.	string	Maximum length: 15														
internal	Implicitly created.	integer	Minimum value: 0 Maximum value: 255	0													
ip	Interface IPv4 address and subnet mask, syntax: X.X.X.X/24.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0													
ip-managed-by-fortiipam	Enable/disable automatic IP address assignment of this interface by FortiIPAM.	option	-	disable													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable automatic IP address assignment of this interface by FortiIPAM.</td></tr><tr><td>disable</td><td>Disable automatic IP address assignment of this interface by FortiIPAM.</td></tr></table>		Option	Description	enable	Enable automatic IP address assignment of this interface by FortiIPAM.	disable	Disable automatic IP address assignment of this interface by FortiIPAM.									
	Option	Description															
	enable	Enable automatic IP address assignment of this interface by FortiIPAM.															
disable	Disable automatic IP address assignment of this interface by FortiIPAM.																

Parameter	Description	Type	Size	Default						
ipmac	Enable/disable IP/MAC binding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IP/MAC binding.</td></tr><tr><td><i>disable</i></td><td>Disable IP/MAC binding.</td></tr></table>	Option	Description	<i>enable</i>	Enable IP/MAC binding.	<i>disable</i>	Disable IP/MAC binding.			
Option	Description									
<i>enable</i>	Enable IP/MAC binding.									
<i>disable</i>	Disable IP/MAC binding.									
ips-sniffer-mode	Enable/disable the use of this interface as a one-armed sniffer.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPS sniffer mode.</td></tr><tr><td><i>disable</i></td><td>Disable IPS sniffer mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPS sniffer mode.	<i>disable</i>	Disable IPS sniffer mode.			
Option	Description									
<i>enable</i>	Enable IPS sniffer mode.									
<i>disable</i>	Disable IPS sniffer mode.									
ipunnumbered	Unnumbered IP used for PPPoE interfaces for which no unique local address is provided.	ipv4-address	Not Specified	0.0.0.0						
l2forward	Enable/disable l2 forwarding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable L2 forwarding.</td></tr><tr><td><i>disable</i></td><td>Disable L2 forwarding.</td></tr></table>	Option	Description	<i>enable</i>	Enable L2 forwarding.	<i>disable</i>	Disable L2 forwarding.			
Option	Description									
<i>enable</i>	Enable L2 forwarding.									
<i>disable</i>	Disable L2 forwarding.									
l2tp-client *	Enable/disable this interface as a Layer 2 Tunneling Protocol (L2TP) client.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable L2TP client.</td></tr><tr><td><i>disable</i></td><td>Disable L2TP client.</td></tr></table>	Option	Description	<i>enable</i>	Enable L2TP client.	<i>disable</i>	Disable L2TP client.			
Option	Description									
<i>enable</i>	Enable L2TP client.									
<i>disable</i>	Disable L2TP client.									
lacp-ha-secondary	LACP HA secondary member.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow HA secondary member to send/receive LACP messages.</td></tr><tr><td><i>disable</i></td><td>Block HA secondary member from sending/receiving LACP messages.</td></tr></table>	Option	Description	<i>enable</i>	Allow HA secondary member to send/receive LACP messages.	<i>disable</i>	Block HA secondary member from sending/receiving LACP messages.			
Option	Description									
<i>enable</i>	Allow HA secondary member to send/receive LACP messages.									
<i>disable</i>	Block HA secondary member from sending/receiving LACP messages.									
lacp-mode	LACP mode.	option	-	active						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Use static aggregation, do not send and ignore any LACP messages.</td></tr></table>	Option	Description	<i>static</i>	Use static aggregation, do not send and ignore any LACP messages.					
Option	Description									
<i>static</i>	Use static aggregation, do not send and ignore any LACP messages.									

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>passive</i></td><td>Passively use LACP to negotiate 802.3ad aggregation.</td></tr><tr><td><i>active</i></td><td>Actively use LACP to negotiate 802.3ad aggregation.</td></tr></table>	Option	Description	<i>passive</i>	Passively use LACP to negotiate 802.3ad aggregation.	<i>active</i>	Actively use LACP to negotiate 802.3ad aggregation.					
	Option	Description										
	<i>passive</i>	Passively use LACP to negotiate 802.3ad aggregation.										
<i>active</i>	Actively use LACP to negotiate 802.3ad aggregation.											
lACP-speed	How often the interface sends LACP messages.	option	-	slow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>slow</i></td><td>Send LACP message every 30 seconds.</td></tr><tr><td><i>fast</i></td><td>Send LACP message every second.</td></tr></table>	Option	Description	<i>slow</i>	Send LACP message every 30 seconds.	<i>fast</i>	Send LACP message every second.					
	Option	Description										
	<i>slow</i>	Send LACP message every 30 seconds.										
<i>fast</i>	Send LACP message every second.											
lcp-echo-interval	Time in seconds between PPPoE Link Control Protocol (LCP) echo requests.	integer	Minimum value: 0 Maximum value: 32767	5								
lcp-max-echo-fails	Maximum missed LCP echo messages before disconnect.	integer	Minimum value: 0 Maximum value: 32767	3								
link-up-delay	Number of milliseconds to wait before considering a link is up.	integer	Minimum value: 50 Maximum value: 3600000	50								
lldp-network-policy	LLDP-MED network policy profile.	string	Maximum length: 35									
lldp-reception	Enable/disable Link Layer Discovery Protocol (LLDP) reception.	option	-	vdom								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable reception of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>disable</i></td><td>Disable reception of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>vdom</i></td><td>Use VDOM Link Layer Discovery Protocol (LLDP) reception configuration setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).	<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).	<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) reception configuration setting.			
	Option	Description										
	<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).										
	<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).										
<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) reception configuration setting.											
lldp-transmission	Enable/disable Link Layer Discovery Protocol (LLDP) transmission.	option	-	vdom								

Parameter	Description	Type	Size	Default																											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable transmission of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>disable</i></td><td>Disable transmission of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>vdom</i></td><td>Use VDOM Link Layer Discovery Protocol (LLDP) transmission configuration setting.</td></tr></table>		Option	Description	<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).	<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).	<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) transmission configuration setting.																					
	Option	Description																													
	<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).																													
	<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).																													
<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) transmission configuration setting.																														
macaddr	Change the interface's MAC address.	mac-address	Not Specified	00:00:00:00:00:00 **																											
managed-subnetwork-size	Number of IP addresses to be allocated by FortiPAM and used by this FortiGate unit's DHCP server settings.	option	-	256																											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>32</td><td>Allocate a subnet with 32 IP addresses.</td></tr><tr><td>64</td><td>Allocate a subnet with 64 IP addresses.</td></tr><tr><td>128</td><td>Allocate a subnet with 128 IP addresses.</td></tr><tr><td>256</td><td>Allocate a subnet with 256 IP addresses.</td></tr><tr><td>512</td><td>Allocate a subnet with 512 IP addresses.</td></tr><tr><td>1024</td><td>Allocate a subnet with 1024 IP addresses.</td></tr><tr><td>2048</td><td>Allocate a subnet with 2048 IP addresses.</td></tr><tr><td>4096</td><td>Allocate a subnet with 4096 IP addresses.</td></tr><tr><td>8192</td><td>Allocate a subnet with 8192 IP addresses.</td></tr><tr><td>16384</td><td>Allocate a subnet with 16384 IP addresses.</td></tr><tr><td>32768</td><td>Allocate a subnet with 32768 IP addresses.</td></tr><tr><td>65536</td><td>Allocate a subnet with 65536 IP addresses.</td></tr></table>		Option	Description	32	Allocate a subnet with 32 IP addresses.	64	Allocate a subnet with 64 IP addresses.	128	Allocate a subnet with 128 IP addresses.	256	Allocate a subnet with 256 IP addresses.	512	Allocate a subnet with 512 IP addresses.	1024	Allocate a subnet with 1024 IP addresses.	2048	Allocate a subnet with 2048 IP addresses.	4096	Allocate a subnet with 4096 IP addresses.	8192	Allocate a subnet with 8192 IP addresses.	16384	Allocate a subnet with 16384 IP addresses.	32768	Allocate a subnet with 32768 IP addresses.	65536	Allocate a subnet with 65536 IP addresses.			
	Option	Description																													
	32	Allocate a subnet with 32 IP addresses.																													
	64	Allocate a subnet with 64 IP addresses.																													
	128	Allocate a subnet with 128 IP addresses.																													
	256	Allocate a subnet with 256 IP addresses.																													
	512	Allocate a subnet with 512 IP addresses.																													
	1024	Allocate a subnet with 1024 IP addresses.																													
	2048	Allocate a subnet with 2048 IP addresses.																													
	4096	Allocate a subnet with 4096 IP addresses.																													
	8192	Allocate a subnet with 8192 IP addresses.																													
	16384	Allocate a subnet with 16384 IP addresses.																													
32768	Allocate a subnet with 32768 IP addresses.																														
65536	Allocate a subnet with 65536 IP addresses.																														
management-ip	High Availability in-band management IP address of this interface.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0																											
measured-downstream-bandwidth	Measured downstream bandwidth (kbps).	integer	Minimum value: 0 Maximum value: 4294967295	0																											

Parameter	Description	Type	Size	Default
measured-upstream-bandwidth	Measured upstream bandwidth (kbps).	integer	Minimum value: 0 Maximum value: 4294967295	0
mediatype *	Select SFP media interface type	option	-	serdes-sfp **
	<b>Option</b> <b>Description</b>			
	<i>serdes-sfp</i>	SFP using SerDes Media Interface		
	<i>sgmii-sfp</i>	SFP using SGMII Media Interface		
	<i>serdes-copper-sfp</i>	Copper SFP using SerDes media Interface.		
member <interface-name>	Physical interfaces that belong to the aggregate or redundant interface. Physical interface name.	string	Maximum length: 79	
min-links	Minimum number of aggregated ports that must be up.	integer	Minimum value: 1 Maximum value: 32	1
min-links-down	Action to take when less than the configured minimum number of links are active.	option	-	operational
	<b>Option</b> <b>Description</b>			
	<i>operational</i>	Set the aggregate operationally down.		
	<i>administrative</i>	Set the aggregate administratively down.		
mode	Addressing mode (static, DHCP, PPPoE).	option	-	static
	<b>Option</b> <b>Description</b>			
	<i>static</i>	Static setting.		
	<i>dhcp</i>	External DHCP client mode.		
	<i>pppoe</i>	External PPPoE mode.		
monitor-bandwidth	Enable monitoring bandwidth on this interface.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable monitoring bandwidth on this interface.		
	<i>disable</i>	Disable monitoring bandwidth on this interface.		
mtu	MTU value for this interface.	integer	Minimum value: 0 Maximum value: 4294967295	1500
mtu-override	Enable to set a custom MTU for this interface.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Override default MTU.		
	<i>disable</i>	Use default MTU.		
mux-type *	Multiplexer type.	option	-	llc-encaps
	<b>Option</b> <b>Description</b>			
	<i>llc-encaps</i>	LLC encapsulation.		
	<i>vc-encaps</i>	VC encapsulation.		
name	Name.	string	Maximum length: 15	
ndiscforward	Enable/disable NDISC forwarding.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable NDISC forwarding.		
	<i>disable</i>	Disable NDISC forwarding.		
netbios-forward	Enable/disable NETBIOS forwarding.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable NETBIOS forwarding.		
	<i>enable</i>	Enable NETBIOS forwarding.		
netflow-sampler	Enable/disable NetFlow on this interface and set the data that NetFlow collects (rx, tx, or both).	option	-	disable

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable NetFlow protocol on this interface.</td></tr><tr><td><i>tx</i></td><td>Monitor transmitted traffic on this interface.</td></tr><tr><td><i>rx</i></td><td>Monitor received traffic on this interface.</td></tr><tr><td><i>both</i></td><td>Monitor transmitted/received traffic on this interface.</td></tr></table>		Option	Description	<i>disable</i>	Disable NetFlow protocol on this interface.	<i>tx</i>	Monitor transmitted traffic on this interface.	<i>rx</i>	Monitor received traffic on this interface.	<i>both</i>	Monitor transmitted/received traffic on this interface.		
	Option	Description												
	<i>disable</i>	Disable NetFlow protocol on this interface.												
	<i>tx</i>	Monitor transmitted traffic on this interface.												
	<i>rx</i>	Monitor received traffic on this interface.												
<i>both</i>	Monitor transmitted/received traffic on this interface.													
np-qos-profile *	NP QoS profile ID.	integer	Minimum value: 0 Maximum value: 15	0										
outbandwidth	Bandwidth limit for outgoing traffic.	integer	Minimum value: 0 Maximum value: 80000000 **	0										
padt-retry-timeout	PPPoE Active Discovery Terminate (PADT) used to terminate sessions after an idle time.	integer	Minimum value: 0 Maximum value: 4294967295	1										
password	PPPoE account's password.	password	Not Specified											
phy-mode *	DSL physical mode.	option	-	vdsl										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>vdsl</i></td><td>VDSL.</td></tr></table>		Option	Description	<i>vdsl</i>	VDSL.								
	Option	Description												
<i>vdsl</i>	VDSL.													
ping-serv-status	PING server status.	integer	Minimum value: 0 Maximum value: 255	0										
poe *	Enable/disable PoE status.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable PoE status.</td></tr><tr><td><i>disable</i></td><td>Disable PoE status.</td></tr></table>		Option	Description	<i>enable</i>	Enable PoE status.	<i>disable</i>	Disable PoE status.						
	Option	Description												
	<i>enable</i>	Enable PoE status.												
<i>disable</i>	Disable PoE status.													
polling-interval	sFlow polling interval in seconds.	integer	Minimum value: 1 Maximum value: 255	20										

Parameter	Description	Type	Size	Default												
pppoe-unnumbered-negotiate	Enable/disable PPPoE unnumbered negotiation.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IP address negotiating for unnumbered.</td></tr><tr><td><i>disable</i></td><td>Disable IP address negotiating for unnumbered.</td></tr></table>	Option	Description	<i>enable</i>	Enable IP address negotiating for unnumbered.	<i>disable</i>	Disable IP address negotiating for unnumbered.									
Option	Description															
<i>enable</i>	Enable IP address negotiating for unnumbered.															
<i>disable</i>	Disable IP address negotiating for unnumbered.															
pptp-auth-type	PPTP authentication type.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically choose authentication.</td></tr><tr><td><i>pap</i></td><td>PAP authentication.</td></tr><tr><td><i>chap</i></td><td>CHAP authentication.</td></tr><tr><td><i>mschapv1</i></td><td>MS-CHAPv1 authentication.</td></tr><tr><td><i>mschapv2</i></td><td>MS-CHAPv2 authentication.</td></tr></table>	Option	Description	<i>auto</i>	Automatically choose authentication.	<i>pap</i>	PAP authentication.	<i>chap</i>	CHAP authentication.	<i>mschapv1</i>	MS-CHAPv1 authentication.	<i>mschapv2</i>	MS-CHAPv2 authentication.			
Option	Description															
<i>auto</i>	Automatically choose authentication.															
<i>pap</i>	PAP authentication.															
<i>chap</i>	CHAP authentication.															
<i>mschapv1</i>	MS-CHAPv1 authentication.															
<i>mschapv2</i>	MS-CHAPv2 authentication.															
pptp-client	Enable/disable PPTP client.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable PPTP client.</td></tr><tr><td><i>disable</i></td><td>Disable PPTP client.</td></tr></table>	Option	Description	<i>enable</i>	Enable PPTP client.	<i>disable</i>	Disable PPTP client.									
Option	Description															
<i>enable</i>	Enable PPTP client.															
<i>disable</i>	Disable PPTP client.															
pptp-password	PPTP password.	password	Not Specified													
pptp-server-ip	PPTP server IP address.	ipv4-address	Not Specified	0.0.0.0												
pptp-timeout	Idle timer in minutes (0 for disabled).	integer	Minimum value: 0 Maximum value: 65535	0												
pptp-user	PPTP user name.	string	Maximum length: 64													
preserve-session-route	Enable/disable preservation of session route when dirty.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable preservation of session route when dirty.</td></tr><tr><td><i>disable</i></td><td>Disable preservation of session route when dirty.</td></tr></table>	Option	Description	<i>enable</i>	Enable preservation of session route when dirty.	<i>disable</i>	Disable preservation of session route when dirty.									
Option	Description															
<i>enable</i>	Enable preservation of session route when dirty.															
<i>disable</i>	Disable preservation of session route when dirty.															

Parameter	Description	Type	Size	Default										
priority	Priority of learned routes.	integer	Minimum value: 1 Maximum value: 65535	1										
priority-override	Enable/disable fail back to higher priority port once recovered.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable fail back to higher priority port once recovered.</td></tr><tr><td>disable</td><td>Disable fail back to higher priority port once recovered.</td></tr></table>	Option	Description	enable	Enable fail back to higher priority port once recovered.	disable	Disable fail back to higher priority port once recovered.							
Option	Description													
enable	Enable fail back to higher priority port once recovered.													
disable	Disable fail back to higher priority port once recovered.													
proxy-captive-portal	Enable/disable proxy captive portal on this interface.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable proxy captive portal on this interface.</td></tr><tr><td>disable</td><td>Disable proxy captive portal on this interface.</td></tr></table>	Option	Description	enable	Enable proxy captive portal on this interface.	disable	Disable proxy captive portal on this interface.							
Option	Description													
enable	Enable proxy captive portal on this interface.													
disable	Disable proxy captive portal on this interface.													
pvc-atm-qos *	SFP-DSL ADSL Fallback PVC ATM QoS.	option	-	cbr										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cbr</td><td>ATM QoS CBR.</td></tr><tr><td>rt-vbr</td><td>ATM QoS rt-VBR.</td></tr><tr><td>nrt-vbr</td><td>ATM QoS nrt-VBR.</td></tr><tr><td>cbr</td><td>ATM QoS CCBR.</td></tr></table>	Option	Description	cbr	ATM QoS CBR.	rt-vbr	ATM QoS rt-VBR.	nrt-vbr	ATM QoS nrt-VBR.	cbr	ATM QoS CCBR.			
Option	Description													
cbr	ATM QoS CBR.													
rt-vbr	ATM QoS rt-VBR.													
nrt-vbr	ATM QoS nrt-VBR.													
cbr	ATM QoS CCBR.													
pvc-chan *	SFP-DSL ADSL Fallback PVC Channel.	integer	Minimum value: 0 Maximum value: 7	0										
pvc-crc *	SFP-DSL ADSL Fallback PVC CRC Option: bit0: sar LLC preserve, bit1: ream LLC preserve, bit2: ream VC-MUX has crc.	integer	Minimum value: 0 Maximum value: 7	2										
pvc-pcr *	SFP-DSL ADSL Fallback PVC Packet Cell Rate in cells.	integer	Minimum value: 0 Maximum value: 5500	0										

Parameter	Description	Type	Size	Default
pvc-scr *	SFP-DSL ADSL Fallback PVC Sustainable Cell Rate in cells.	integer	Minimum value: 0 Maximum value: 5500	0
pvc-vlan-id *	SFP-DSL ADSL Fallback PVC VLAN ID.	integer	Minimum value: 1 Maximum value: 4094	7
pvc-vlan-rx-id *	SFP-DSL ADSL Fallback PVC VLANID RX.	integer	Minimum value: 1 Maximum value: 4094	7
pvc-vlan-rx-op *	SFP-DSL ADSL Fallback PVC VLAN RX op.	option	-	pass-through
	Option	Description		
	pass-through	PVC VLAN Tag Passthrough.		
	replace	PVC VLAN Tag Replace.		
	remove	PVC VLAN Tag Remove.		
pvc-vlan-tx-id *	SFP-DSL ADSL Fallback PVC VLAN ID TX.	integer	Minimum value: 1 Maximum value: 4094	7
pvc-vlan-tx-op *	SFP-DSL ADSL Fallback PVC VLAN TX op.	option	-	remove
	Option	Description		
	pass-through	PVC VLAN Tag Passthrough.		
	replace	PVC VLAN Tag Replace.		
	remove	PVC VLAN Tag Remove.		
reachable-time	IPv4 reachable time in milliseconds.	integer	Minimum value: 30000 Maximum value: 3600000	30000
redundant-interface	Redundant interface.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default										
remote-ip	Remote IP address of tunnel.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0										
replacemsg-override-group	Replacement message override group.	string	Maximum length: 35											
retransmission *	Enable/disable DSL retransmission.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable retransmission.</td></tr><tr><td><i>enable</i></td><td>Enable retransmission.</td></tr></table>				Option	Description	<i>disable</i>	Disable retransmission.	<i>enable</i>	Enable retransmission.				
Option	Description													
<i>disable</i>	Disable retransmission.													
<i>enable</i>	Enable retransmission.													
ring-rx *	RX ring size.	integer	Minimum value: 0 Maximum value: 4294967295	0										
ring-tx *	TX ring size.	integer	Minimum value: 0 Maximum value: 4294967295	0										
role	Interface role.	option	-	undefined										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>lan</i></td><td>Connected to local network of endpoints.</td></tr><tr><td><i>wan</i></td><td>Connected to Internet.</td></tr><tr><td><i>dmz</i></td><td>Connected to server zone.</td></tr><tr><td><i>undefined</i></td><td>Interface has no specific role.</td></tr></table>				Option	Description	<i>lan</i>	Connected to local network of endpoints.	<i>wan</i>	Connected to Internet.	<i>dmz</i>	Connected to server zone.	<i>undefined</i>	Interface has no specific role.
Option	Description													
<i>lan</i>	Connected to local network of endpoints.													
<i>wan</i>	Connected to Internet.													
<i>dmz</i>	Connected to server zone.													
<i>undefined</i>	Interface has no specific role.													
sample-direction	Data that NetFlow collects (rx, tx, or both).	option	-	both										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tx</i></td><td>Monitor transmitted traffic on this interface.</td></tr><tr><td><i>rx</i></td><td>Monitor received traffic on this interface.</td></tr><tr><td><i>both</i></td><td>Monitor transmitted/received traffic on this interface.</td></tr></table>				Option	Description	<i>tx</i>	Monitor transmitted traffic on this interface.	<i>rx</i>	Monitor received traffic on this interface.	<i>both</i>	Monitor transmitted/received traffic on this interface.		
Option	Description													
<i>tx</i>	Monitor transmitted traffic on this interface.													
<i>rx</i>	Monitor received traffic on this interface.													
<i>both</i>	Monitor transmitted/received traffic on this interface.													

Parameter	Description	Type	Size	Default										
sample-rate	sFlow sample rate.	integer	Minimum value: 10 Maximum value: 99999	2000										
secondary-IP	Enable/disable adding a secondary IP to this interface.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable secondary IP.</td></tr><tr><td><i>disable</i></td><td>Disable secondary IP.</td></tr></table>				Option	Description	<i>enable</i>	Enable secondary IP.	<i>disable</i>	Disable secondary IP.				
	Option	Description												
	<i>enable</i>	Enable secondary IP.												
	<i>disable</i>	Disable secondary IP.												
security-8021x-dynamic-vlan-id *	VLAN ID for virtual switch.	integer	Minimum value: 0 Maximum value: 4094	0										
security-8021x-master *	802.1X master virtual-switch.	string	Maximum length: 15											
security-8021x-mode *	802.1X mode.	option	-	default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>802.1X default mode.</td></tr><tr><td><i>dynamic-vlan</i></td><td>802.1X dynamic VLAN (master) mode.</td></tr><tr><td><i>fallback</i></td><td>802.1X fallback (master) mode.</td></tr><tr><td><i>slave</i></td><td>802.1X slave mode.</td></tr></table>				Option	Description	<i>default</i>	802.1X default mode.	<i>dynamic-vlan</i>	802.1X dynamic VLAN (master) mode.	<i>fallback</i>	802.1X fallback (master) mode.	<i>slave</i>	802.1X slave mode.
	Option	Description												
	<i>default</i>	802.1X default mode.												
	<i>dynamic-vlan</i>	802.1X dynamic VLAN (master) mode.												
	<i>fallback</i>	802.1X fallback (master) mode.												
<i>slave</i>	802.1X slave mode.													
security-exempt-list	Name of security-exempt-list.	string	Maximum length: 35											
security-external-logout	URL of external authentication logout server.	string	Maximum length: 127											
security-external-web	URL of external authentication web server.	var-string	Maximum length: 1023											
security-groups <name>	User groups that can authenticate with the captive portal. Names of user groups that can authenticate with the captive portal.	string	Maximum length: 79											
security-mac-auth-bypass	Enable/disable MAC authentication bypass.	option	-	disable										

Parameter	Description	Type	Size	Default
	<div><div>Option</div><div>Description</div></div>			
	mac-auth-only	Enable MAC authentication bypass without EAP.		
	enable	Enable MAC authentication bypass.		
	disable	Disable MAC authentication bypass.		
security-mode	Turn on captive portal authentication for this interface.	option	-	none
	<div><div>Option</div><div>Description</div></div>			
	none	No security option.		
	captive-portal	Captive portal authentication.		
	802.1X	802.1X port-based authentication.		
security-redirect-url	URL redirection after disclaimer/authentication.	var-string	Maximum length: 1023	
service-name	PPPoE service name.	string	Maximum length: 63	
sflow-sampler	Enable/disable sFlow on this interface.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	enable	Enable sFlow protocol on this interface.		
	disable	Disable sFlow protocol on this interface.		
sfp-dsl *	Enable/disable SFP DSL.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	disable	Disable SFP DSL.		
	enable	Enable SFP DSL.		
sfp-dsl-adsl-fallback *	Enable/disable SFP DSL ADSL fallback.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	disable	Disable SFP DSL ADSL fallback.		
	enable	Enable SFP DSL ADSL fallback.		
sfp-dsl-autodetect *	Enable/disable SFP DSL MAC address autodetect.	option	-	enable

Parameter	Description	Type	Size	Default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SFP DSL MAC address autodetect.</td></tr><tr><td><i>enable</i></td><td>Enable SFP DSL MAC address autodetect.</td></tr></table>				Option	Description	<i>disable</i>	Disable SFP DSL MAC address autodetect.	<i>enable</i>	Enable SFP DSL MAC address autodetect.														
	Option	Description																						
	<i>disable</i>	Disable SFP DSL MAC address autodetect.																						
<i>enable</i>	Enable SFP DSL MAC address autodetect.																							
sfp-dsl-mac *	SFP DSL MAC address.	mac-address	Not Specified	00:00:00:00:00:00																				
snmp-index	Permanent SNMP Index of the interface.	integer	Minimum value: 1 Maximum value: 2147483647	0																				
speed	Interface speed. The default setting and the options available depend on the interface hardware.	option	-	auto																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically adjust speed.</td></tr><tr><td><i>10full</i></td><td>10M full-duplex.</td></tr><tr><td><i>10half</i></td><td>10M half-duplex.</td></tr><tr><td><i>100full</i></td><td>100M full-duplex.</td></tr><tr><td><i>100half</i></td><td>100M half-duplex.</td></tr><tr><td><i>1000full</i></td><td>1000M full-duplex.</td></tr><tr><td><i>1000auto</i></td><td>1000M auto adjust.</td></tr><tr><td><i>10000full</i></td><td>10G full-duplex.</td></tr><tr><td><i>10000auto</i></td><td>10G auto.</td></tr></table>				Option	Description	<i>auto</i>	Automatically adjust speed.	<i>10full</i>	10M full-duplex.	<i>10half</i>	10M half-duplex.	<i>100full</i>	100M full-duplex.	<i>100half</i>	100M half-duplex.	<i>1000full</i>	1000M full-duplex.	<i>1000auto</i>	1000M auto adjust.	<i>10000full</i>	10G full-duplex.	<i>10000auto</i>	10G auto.
	Option	Description																						
	<i>auto</i>	Automatically adjust speed.																						
	<i>10full</i>	10M full-duplex.																						
	<i>10half</i>	10M half-duplex.																						
	<i>100full</i>	100M full-duplex.																						
	<i>100half</i>	100M half-duplex.																						
	<i>1000full</i>	1000M full-duplex.																						
	<i>1000auto</i>	1000M auto adjust.																						
	<i>10000full</i>	10G full-duplex.																						
<i>10000auto</i>	10G auto.																							
spillover-threshold	Egress Spillover threshold , 0 means unlimited.	integer	Minimum value: 0 Maximum value: 16776000	0																				
src-check	Enable/disable source IP check.	option	-	enable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable source IP check.</td></tr><tr><td><i>disable</i></td><td>Disable source IP check.</td></tr></table>				Option	Description	<i>enable</i>	Enable source IP check.	<i>disable</i>	Disable source IP check.														
	Option	Description																						
	<i>enable</i>	Enable source IP check.																						
<i>disable</i>	Disable source IP check.																							
status	Bring the interface up or shut the interface down.	option	-	up																				

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>up</i>	Bring the interface up.		
	<i>down</i>	Shut the interface down.		
stp *	Enable/disable STP.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable STP.		
	<i>enable</i>	Enable STP.		
stp-ha-secondary *	Control STP behavior on HA secondary.	option	-	priority-adjust
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable STP negotiation on HA secondary.		
	<i>enable</i>	Enable STP negotiation on HA secondary.		
	<i>priority-adjust</i>	Enable STP negotiation on HA secondary and make priority lower than HA primary.		
stpforward	Enable/disable STP forwarding.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable STP forwarding.		
	<i>disable</i>	Disable STP forwarding.		
stpforward-mode	Configure STP forwarding mode.	option	-	rpl-all-ext-id
	<b>Option</b> <b>Description</b>			
	<i>rpl-all-ext-id</i>	Replace all extension IDs (root, bridge).		
	<i>rpl-bridge-ext-id</i>	Replace the bridge extension ID only.		
	<i>rpl-nothing</i>	Replace nothing.		
subst	Enable to always send packets from this interface to a destination MAC address.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Send packets from this interface.		
	<i>disable</i>	Do not send packets from this interface.		

Parameter	Description	Type	Size	Default								
substitute-dst-mac	Destination MAC address that all packets are sent to from this interface.	mac-address	Not Specified	00:00:00:00:00:00								
sw-algorithm *	Frame distribution algorithm for switch.	option	-	eh								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>l2</i></td><td>Use layer 2 address for distribution.</td></tr><tr><td><i>l3</i></td><td>Use layer 3 address for distribution.</td></tr><tr><td><i>eh</i></td><td>Use enhanced hashing for distribution.</td></tr></table>	Option	Description	<i>l2</i>	Use layer 2 address for distribution.	<i>l3</i>	Use layer 3 address for distribution.	<i>eh</i>	Use enhanced hashing for distribution.			
Option	Description											
<i>l2</i>	Use layer 2 address for distribution.											
<i>l3</i>	Use layer 3 address for distribution.											
<i>eh</i>	Use enhanced hashing for distribution.											
swc-first-create *	Initial create for switch-controller VLANs.	integer	Minimum value: 0 Maximum value: 4294967295	0								
swc-vlan *	Creation status for switch-controller VLANs.	integer	Minimum value: 0 Maximum value: 4294967295	0								
switch	Contained in switch.	string	Maximum length: 15									
switch-controller-access-vlan *	Block FortiSwitch port-to-port traffic.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Block FortiSwitch port-to-port traffic on the VLAN, only permitting traffic to and from the FortiGate.</td></tr><tr><td><i>disable</i></td><td>Allow normal VLAN traffic.</td></tr></table>	Option	Description	<i>enable</i>	Block FortiSwitch port-to-port traffic on the VLAN, only permitting traffic to and from the FortiGate.	<i>disable</i>	Allow normal VLAN traffic.					
Option	Description											
<i>enable</i>	Block FortiSwitch port-to-port traffic on the VLAN, only permitting traffic to and from the FortiGate.											
<i>disable</i>	Allow normal VLAN traffic.											
switch-controller-arp-inspection *	Enable/disable FortiSwitch ARP inspection.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ARP inspection for FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable ARP inspection for FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable ARP inspection for FortiSwitch devices.	<i>disable</i>	Disable ARP inspection for FortiSwitch devices.					
Option	Description											
<i>enable</i>	Enable ARP inspection for FortiSwitch devices.											
<i>disable</i>	Disable ARP inspection for FortiSwitch devices.											
switch-controller-dhcp-snooping *	Switch controller DHCP snooping.	option	-	disable								

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP snooping for FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP snooping for FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCP snooping for FortiSwitch devices.	<i>disable</i>	Disable DHCP snooping for FortiSwitch devices.															
	Option	Description																				
	<i>enable</i>	Enable DHCP snooping for FortiSwitch devices.																				
<i>disable</i>	Disable DHCP snooping for FortiSwitch devices.																					
switch-controller-dhcp-snooping-option82 *	Switch controller DHCP snooping option82.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP snooping insert option82 for FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP snooping insert option82 for FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCP snooping insert option82 for FortiSwitch devices.	<i>disable</i>	Disable DHCP snooping insert option82 for FortiSwitch devices.															
	Option	Description																				
	<i>enable</i>	Enable DHCP snooping insert option82 for FortiSwitch devices.																				
<i>disable</i>	Disable DHCP snooping insert option82 for FortiSwitch devices.																					
switch-controller-dhcp-snooping-verify-mac *	Switch controller DHCP snooping verify MAC.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP snooping verify source MAC for FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP snooping verify source MAC for FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCP snooping verify source MAC for FortiSwitch devices.	<i>disable</i>	Disable DHCP snooping verify source MAC for FortiSwitch devices.															
	Option	Description																				
	<i>enable</i>	Enable DHCP snooping verify source MAC for FortiSwitch devices.																				
<i>disable</i>	Disable DHCP snooping verify source MAC for FortiSwitch devices.																					
switch-controller-dynamic *	Integrated FortiLink settings for managed FortiSwitch.	string	Maximum length: 35																			
switch-controller-feature *	Interface's purpose when assigning traffic (read only).	option	-	none																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>VLAN for generic purpose.</td></tr><tr><td><i>default-vlan</i></td><td>Default VLAN (native) assigned to all switch ports upon discovery.</td></tr><tr><td><i>quarantine</i></td><td>VLAN for quarantined traffic.</td></tr><tr><td><i>rspan</i></td><td>VLAN for RSPAN/ERSPAN mirrored traffic.</td></tr><tr><td><i>voice</i></td><td>VLAN dedicated for voice devices.</td></tr><tr><td><i>video</i></td><td>VLAN dedicated for camera devices.</td></tr><tr><td><i>nac</i></td><td>VLAN dedicated for NAC onboarding devices.</td></tr><tr><td><i>nac-segment</i></td><td>VLAN dedicated for NAC segment devices.</td></tr></table>	Option	Description	<i>none</i>	VLAN for generic purpose.	<i>default-vlan</i>	Default VLAN (native) assigned to all switch ports upon discovery.	<i>quarantine</i>	VLAN for quarantined traffic.	<i>rspan</i>	VLAN for RSPAN/ERSPAN mirrored traffic.	<i>voice</i>	VLAN dedicated for voice devices.	<i>video</i>	VLAN dedicated for camera devices.	<i>nac</i>	VLAN dedicated for NAC onboarding devices.	<i>nac-segment</i>	VLAN dedicated for NAC segment devices.			
	Option	Description																				
	<i>none</i>	VLAN for generic purpose.																				
	<i>default-vlan</i>	Default VLAN (native) assigned to all switch ports upon discovery.																				
	<i>quarantine</i>	VLAN for quarantined traffic.																				
	<i>rspan</i>	VLAN for RSPAN/ERSPAN mirrored traffic.																				
	<i>voice</i>	VLAN dedicated for voice devices.																				
	<i>video</i>	VLAN dedicated for camera devices.																				
<i>nac</i>	VLAN dedicated for NAC onboarding devices.																					
<i>nac-segment</i>	VLAN dedicated for NAC segment devices.																					
switch-controller-igmp-snooping *	Switch controller IGMP snooping.	option	-	disable																		

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable IGMP snooping.		
	<i>disable</i>	Disable IGMP snooping.		
switch-controller-igmp-snooping-fast-leave *	Switch controller IGMP snooping fast-leave.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable IGMP snooping fast-leave.		
	<i>disable</i>	Disable IGMP snooping fast-leave.		
switch-controller-igmp-snooping-proxy *	Switch controller IGMP snooping proxy.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable IGMP snooping proxy.		
	<i>disable</i>	Disable IGMP snooping proxy.		
switch-controller-iot-scanning *	Enable/disable managed FortiSwitch IoT scanning.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable IoT scanning for managed FortiSwitch devices.		
	<i>disable</i>	Disable IoT scanning for managed FortiSwitch devices.		
switch-controller-learning-limit *	Limit the number of dynamic MAC addresses on this VLAN.	integer	Minimum value: 0 Maximum value: 128	0
switch-controller-mgmt-vlan *	VLAN to use for FortiLink management purposes.	integer	Minimum value: 1 Maximum value: 4094	4094
switch-controller-nac *	Integrated FortiLink settings for managed FortiSwitch.	string	Maximum length: 35	
switch-controller-netflow-collect *	NetFlow collection and processing.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable NetFlow collection.</td></tr><tr><td><i>enable</i></td><td>Enable NetFlow collection.</td></tr></table>	Option	Description	<i>disable</i>	Disable NetFlow collection.	<i>enable</i>	Enable NetFlow collection.			
	Option	Description								
	<i>disable</i>	Disable NetFlow collection.								
<i>enable</i>	Enable NetFlow collection.									
switch-controller-rspan-mode *	Stop Layer2 MAC learning and interception of BPDUs and other packets on this interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable RSPAN passthrough mode on this VLAN interface.</td></tr><tr><td><i>enable</i></td><td>Enable RSPAN passthrough mode on this VLAN interface.</td></tr></table>	Option	Description	<i>disable</i>	Disable RSPAN passthrough mode on this VLAN interface.	<i>enable</i>	Enable RSPAN passthrough mode on this VLAN interface.			
	Option	Description								
	<i>disable</i>	Disable RSPAN passthrough mode on this VLAN interface.								
<i>enable</i>	Enable RSPAN passthrough mode on this VLAN interface.									
switch-controller-source-ip *	Source IP address used in FortiLink over L3 connections.	option	-	outbound						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>outbound</i></td><td>Source IP address is that of the outbound interface.</td></tr><tr><td><i>fixed</i></td><td>Source IP address is that of the FortiLink interface.</td></tr></table>	Option	Description	<i>outbound</i>	Source IP address is that of the outbound interface.	<i>fixed</i>	Source IP address is that of the FortiLink interface.			
	Option	Description								
	<i>outbound</i>	Source IP address is that of the outbound interface.								
<i>fixed</i>	Source IP address is that of the FortiLink interface.									
switch-controller-traffic-policy *	Switch controller traffic policy for the VLAN.	string	Maximum length: 63							
system-id	Define a system ID for the aggregate interface.	mac-address	Not Specified	00:00:00:00:00:00						
system-id-type	Method in which system ID is generated.	option	-	auto						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Use the MAC address of the first member.</td></tr><tr><td><i>user</i></td><td>User-defined system ID.</td></tr></table>	Option	Description	<i>auto</i>	Use the MAC address of the first member.	<i>user</i>	User-defined system ID.			
	Option	Description								
	<i>auto</i>	Use the MAC address of the first member.								
<i>user</i>	User-defined system ID.									
tc-mode *	DSL transfer mode.	option	-	ptm						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ptm</i></td><td>Packet transfer mode.</td></tr></table>	Option	Description	<i>ptm</i>	Packet transfer mode.					
	Option	Description								
<i>ptm</i>	Packet transfer mode.									
tcp-mss	TCP maximum segment size. 0 means do not change segment size.	integer	Minimum value: 48 Maximum value: 65535	0						
trunk *	Enable/disable VLAN trunk.	option	-	disable						

Parameter	Description	Type	Size	Default																										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VLAN trunk on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable VLAN trunk on this interface.</td></tr></table>				Option	Description	<i>enable</i>	Enable VLAN trunk on this interface.	<i>disable</i>	Disable VLAN trunk on this interface.																				
	Option	Description																												
	<i>enable</i>	Enable VLAN trunk on this interface.																												
<i>disable</i>	Disable VLAN trunk on this interface.																													
trust-ip-1	Trusted host for dedicated management traffic (0.0.0.0/24 for all hosts).	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0																										
trust-ip-2	Trusted host for dedicated management traffic (0.0.0.0/24 for all hosts).	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0																										
trust-ip-3	Trusted host for dedicated management traffic (0.0.0.0/24 for all hosts).	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0																										
trust-ip6-1	Trusted IPv6 host for dedicated management traffic (::/0 for all hosts).	ipv6-prefix	Not Specified	::/0																										
trust-ip6-2	Trusted IPv6 host for dedicated management traffic (::/0 for all hosts).	ipv6-prefix	Not Specified	::/0																										
trust-ip6-3	Trusted IPv6 host for dedicated management traffic (::/0 for all hosts).	ipv6-prefix	Not Specified	::/0																										
type	Interface type.	option	-	vlan																										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>physical</i></td><td>Physical interface.</td></tr><tr><td><i>vlan</i></td><td>VLAN interface.</td></tr><tr><td><i>aggregate</i></td><td>Aggregate interface.</td></tr><tr><td><i>redundant</i></td><td>Redundant interface.</td></tr><tr><td><i>tunnel</i></td><td>Tunnel interface.</td></tr><tr><td><i>vdom-link</i></td><td>VDOM link interface.</td></tr><tr><td><i>loopback</i></td><td>Loopback interface.</td></tr><tr><td><i>switch</i></td><td>Software switch interface.</td></tr><tr><td><i>vap-switch</i></td><td>VAP interface.</td></tr><tr><td><i>wl-mesh</i></td><td>WLAN mesh interface.</td></tr><tr><td><i>fext-wan</i></td><td>FortiExtender interface.</td></tr><tr><td><i>vxlan</i></td><td>VXLAN interface.</td></tr></table>				Option	Description	<i>physical</i>	Physical interface.	<i>vlan</i>	VLAN interface.	<i>aggregate</i>	Aggregate interface.	<i>redundant</i>	Redundant interface.	<i>tunnel</i>	Tunnel interface.	<i>vdom-link</i>	VDOM link interface.	<i>loopback</i>	Loopback interface.	<i>switch</i>	Software switch interface.	<i>vap-switch</i>	VAP interface.	<i>wl-mesh</i>	WLAN mesh interface.	<i>fext-wan</i>	FortiExtender interface.	<i>vxlan</i>	VXLAN interface.
	Option	Description																												
	<i>physical</i>	Physical interface.																												
	<i>vlan</i>	VLAN interface.																												
	<i>aggregate</i>	Aggregate interface.																												
	<i>redundant</i>	Redundant interface.																												
	<i>tunnel</i>	Tunnel interface.																												
	<i>vdom-link</i>	VDOM link interface.																												
	<i>loopback</i>	Loopback interface.																												
	<i>switch</i>	Software switch interface.																												
	<i>vap-switch</i>	VAP interface.																												
	<i>wl-mesh</i>	WLAN mesh interface.																												
	<i>fext-wan</i>	FortiExtender interface.																												
<i>vxlan</i>	VXLAN interface.																													

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>geneve</i></td><td>GENEVE interface.</td></tr><tr><td><i>hdlc</i></td><td>T1/E1 interface.</td></tr><tr><td><i>switch-vlan</i></td><td>Switch VLAN interface.</td></tr><tr><td><i>emac-vlan</i></td><td>EMAC VLAN interface.</td></tr><tr><td><i>ssl</i></td><td>SSL VPN client interface.</td></tr><tr><td><i>lan-extension</i></td><td>LAN extension interface.</td></tr></table>	Option	Description	<i>geneve</i>	GENEVE interface.	<i>hdlc</i>	T1/E1 interface.	<i>switch-vlan</i>	Switch VLAN interface.	<i>emac-vlan</i>	EMAC VLAN interface.	<i>ssl</i>	SSL VPN client interface.	<i>lan-extension</i>	LAN extension interface.			
	Option	Description																
	<i>geneve</i>	GENEVE interface.																
	<i>hdlc</i>	T1/E1 interface.																
	<i>switch-vlan</i>	Switch VLAN interface.																
	<i>emac-vlan</i>	EMAC VLAN interface.																
	<i>ssl</i>	SSL VPN client interface.																
<i>lan-extension</i>	LAN extension interface.																	
username	Username of the PPPoE account, provided by your ISP.	string	Maximum length: 64															
vci *	Virtual Channel ID.	integer	Minimum value: 0 Maximum value: 65535	35														
vdom	Interface is in this virtual domain (VDOM).	string	Maximum length: 31															
vectoring *	Enable/disable DSL vectoring.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable vectoring.</td></tr><tr><td><i>enable</i></td><td>Enable vectoring.</td></tr></table>	Option	Description	<i>disable</i>	Disable vectoring.	<i>enable</i>	Enable vectoring.											
	Option	Description																
	<i>disable</i>	Disable vectoring.																
<i>enable</i>	Enable vectoring.																	
vindex *	Switch control interface VLAN ID.	integer	Minimum value: 0 Maximum value: 65535	0														
vlan-protocol	Ethernet protocol of VLAN.	option	-	8021q														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>8021q</i></td><td>IEEE 802.1Q.</td></tr><tr><td><i>8021ad</i></td><td>IEEE 802.1AD.</td></tr></table>	Option	Description	<i>8021q</i>	IEEE 802.1Q.	<i>8021ad</i>	IEEE 802.1AD.											
	Option	Description																
	<i>8021q</i>	IEEE 802.1Q.																
<i>8021ad</i>	IEEE 802.1AD.																	
vlanforward	Enable/disable traffic forwarding between VLANs on this interface.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable traffic forwarding.</td></tr><tr><td><i>disable</i></td><td>Disable traffic forwarding.</td></tr></table>	Option	Description	<i>enable</i>	Enable traffic forwarding.	<i>disable</i>	Disable traffic forwarding.											
	Option	Description																
	<i>enable</i>	Enable traffic forwarding.																
<i>disable</i>	Disable traffic forwarding.																	

Parameter	Description	Type	Size	Default						
vlanid	VLAN ID.	integer	Minimum value: 1 Maximum value: 4094	0						
vpi *	Virtual Path ID.	integer	Minimum value: 0 Maximum value: 255	0						
vrf	Virtual Routing Forwarding ID.	integer	Minimum value: 0 Maximum value: 251	0						
vrrp-virtual-mac	Enable/disable use of virtual MAC for VRRP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of virtual MAC for VRRP.</td></tr><tr><td>disable</td><td>Disable use of virtual MAC for VRRP.</td></tr></table>	Option	Description	enable	Enable use of virtual MAC for VRRP.	disable	Disable use of virtual MAC for VRRP.			
Option	Description									
enable	Enable use of virtual MAC for VRRP.									
disable	Disable use of virtual MAC for VRRP.									
wccp	Enable/disable WCCP on this interface. Used for encapsulated WCCP communication between WCCP clients and servers.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WCCP protocol on this interface.</td></tr><tr><td>disable</td><td>Disable WCCP protocol on this interface.</td></tr></table>	Option	Description	enable	Enable WCCP protocol on this interface.	disable	Disable WCCP protocol on this interface.			
Option	Description									
enable	Enable WCCP protocol on this interface.									
disable	Disable WCCP protocol on this interface.									
weight	Default weight for static routes (if route has no weight configured).	integer	Minimum value: 0 Maximum value: 255	0						
wifi-5g-threshold *	Minimal signal strength to be considered as a good 5G AP.	string	Maximum length: 7	-78						
wifi-acl *	Access control for MAC addresses in the MAC list.	option	-	deny						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow.</td></tr><tr><td>deny</td><td>Deny.</td></tr></table>	Option	Description	allow	Allow.	deny	Deny.			
Option	Description									
allow	Allow.									
deny	Deny.									

Parameter	Description	Type	Size	Default								
wifi-ap-band *	How to select the AP to connect.	option	-	any								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Connect to the best 2G or 5G AP.</td></tr><tr><td><i>5g-preferred</i></td><td>Connect to the 5G AP if a good 5G AP exists.</td></tr><tr><td><i>5g-only</i></td><td>Only connect to the 5G AP.</td></tr></table>	Option	Description	<i>any</i>	Connect to the best 2G or 5G AP.	<i>5g-preferred</i>	Connect to the 5G AP if a good 5G AP exists.	<i>5g-only</i>	Only connect to the 5G AP.			
	Option	Description										
	<i>any</i>	Connect to the best 2G or 5G AP.										
	<i>5g-preferred</i>	Connect to the 5G AP if a good 5G AP exists.										
<i>5g-only</i>	Only connect to the 5G AP.											
wifi-auth *	WiFi authentication.	option	-	PSK								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>PSK</i></td><td>PSK.</td></tr><tr><td><i>radius</i></td><td>RADIUS.</td></tr><tr><td><i>usergroup</i></td><td>User group.</td></tr></table>	Option	Description	<i>PSK</i>	PSK.	<i>radius</i>	RADIUS.	<i>usergroup</i>	User group.			
	Option	Description										
	<i>PSK</i>	PSK.										
	<i>radius</i>	RADIUS.										
<i>usergroup</i>	User group.											
wifi-auto-connect *	Enable/disable WiFi network auto connect.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WiFi network auto connect.</td></tr><tr><td><i>disable</i></td><td>Disable WiFi network auto connect.</td></tr></table>	Option	Description	<i>enable</i>	Enable WiFi network auto connect.	<i>disable</i>	Disable WiFi network auto connect.					
	Option	Description										
	<i>enable</i>	Enable WiFi network auto connect.										
<i>disable</i>	Disable WiFi network auto connect.											
wifi-auto-save *	Enable/disable WiFi network automatic save.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WiFi network automatic save.</td></tr><tr><td><i>disable</i></td><td>Disable WiFi network automatic save.</td></tr></table>	Option	Description	<i>enable</i>	Enable WiFi network automatic save.	<i>disable</i>	Disable WiFi network automatic save.					
	Option	Description										
	<i>enable</i>	Enable WiFi network automatic save.										
<i>disable</i>	Disable WiFi network automatic save.											
wifi-broadcast-ssid *	Enable/disable SSID broadcast in the beacon.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSID broadcast in the beacon.</td></tr><tr><td><i>disable</i></td><td>Disable SSID broadcast in the beacon.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSID broadcast in the beacon.	<i>disable</i>	Disable SSID broadcast in the beacon.					
	Option	Description										
	<i>enable</i>	Enable SSID broadcast in the beacon.										
<i>disable</i>	Disable SSID broadcast in the beacon.											
wifi-dns-server1 *	DNS server 1.	ipv4-address	Not Specified	0.0.0.0								
wifi-dns-server2 *	DNS server 2.	ipv4-address	Not Specified	0.0.0.0								
wifi-encrypt *	Data encryption.	option	-	AES								

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>TKIP</td><td>TKIP.</td></tr><tr><td>AES</td><td>AES.</td></tr></table>	Option	Description	TKIP	TKIP.	AES	AES.									
	Option	Description														
	TKIP	TKIP.														
AES	AES.															
wifi-fragment-threshold *	WiFi fragment threshold.	integer	Minimum value: 800 Maximum value: 2346	2346												
wifi-gateway *	IPv4 default gateway IP address.	ipv4-address	Not Specified	0.0.0.0												
wifi-key *	WiFi WEP Key.	password	Not Specified													
wifi-keyindex *	WEP key index.	integer	Minimum value: 1 Maximum value: 4	1												
wifi-mac-filter *	Enable/disable MAC filter status.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable MAC filter.</td></tr><tr><td>disable</td><td>Disable MAC filter.</td></tr></table>	Option	Description	enable	Enable MAC filter.	disable	Disable MAC filter.									
	Option	Description														
	enable	Enable MAC filter.														
disable	Disable MAC filter.															
wifi-passphrase *	WiFi pre-shared key for WPA.	password	Not Specified													
wifi-radius-server *	WiFi RADIUS server for WPA.	string	Maximum length: 35													
wifi-rts-threshold *	WiFi RTS threshold.	integer	Minimum value: 256 Maximum value: 2346	2346												
wifi-security *	Wireless access security of SSID.	option	-	wpa-personal												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>open</td><td>Open.</td></tr><tr><td>wep64</td><td>WEP64.</td></tr><tr><td>wep128</td><td>WEP128.</td></tr><tr><td>wpa-personal</td><td>WPA personal.</td></tr><tr><td>wpa-enterprise</td><td>WPA enterprise.</td></tr></table>	Option	Description	open	Open.	wep64	WEP64.	wep128	WEP128.	wpa-personal	WPA personal.	wpa-enterprise	WPA enterprise.			
	Option	Description														
	open	Open.														
	wep64	WEP64.														
	wep128	WEP128.														
	wpa-personal	WPA personal.														
wpa-enterprise	WPA enterprise.

	Option	Description												
	<i>wpa-only-personal</i>	WPA personal only.												
	<i>wpa-only-enterprise</i>	WPA enterprise only.												
	<i>wpa2-only-personal</i>	WPA2 personal only.												
<i>wpa2-only-enterprise</i>	WPA2 enterprise only.													
wifi-ssid *	IEEE 802.11 Service Set Identifier.	string	Maximum length: 32	fortinet										
wifi-usergroup *	WiFi user group for WPA.	string	Maximum length: 35											
wins-ip	WINS server IP.	ipv4-address	Not Specified	0.0.0.0										

\* This parameter may not exist in some models.

\*\* Values may differ between models.

### config client-options

Parameter	Description	Type	Size	Default										
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0										
code	DHCP client option code.	integer	Minimum value: 0 Maximum value: 255	0										
type	DHCP client option type.	option	-	hex										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hex</i></td><td>DHCP option in hex.</td></tr><tr><td><i>string</i></td><td>DHCP option in string.</td></tr><tr><td><i>ip</i></td><td>DHCP option in IP.</td></tr><tr><td><i>fqdn</i></td><td>DHCP option in domain search option format.</td></tr></table>	Option	Description	<i>hex</i>	DHCP option in hex.	<i>string</i>	DHCP option in string.	<i>ip</i>	DHCP option in IP.	<i>fqdn</i>	DHCP option in domain search option format.			
Option	Description													
<i>hex</i>	DHCP option in hex.													
<i>string</i>	DHCP option in string.													
<i>ip</i>	DHCP option in IP.													
<i>fqdn</i>	DHCP option in domain search option format.													

Parameter	Description	Type	Size	Default
value	DHCP client option value.	string	Maximum length: 312	
ip	DHCP option IPs.	user	Not Specified	

### config dhcp-snooping-server-list

Parameter	Description	Type	Size	Default
name	DHCP server name.	string	Maximum length: 35	default
server-ip	IP address for DHCP server.	ipv4-address	Not Specified	0.0.0.0

### config egress-queues

Parameter	Description	Type	Size	Default
cos0	CoS profile name for CoS 0.	string	Maximum length: 35	
cos1	CoS profile name for CoS 1.	string	Maximum length: 35	
cos2	CoS profile name for CoS 2.	string	Maximum length: 35	
cos3	CoS profile name for CoS 3.	string	Maximum length: 35	
cos4	CoS profile name for CoS 4.	string	Maximum length: 35	
cos5	CoS profile name for CoS 5.	string	Maximum length: 35	
cos6	CoS profile name for CoS 6.	string	Maximum length: 35	
cos7	CoS profile name for CoS 7.	string	Maximum length: 35	

### config ipv6

Parameter	Description	Type	Size	Default
ipv6-mode	Addressing mode (static, DHCP, delegated).	option	-	static

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Static setting.</td></tr><tr><td><i>dhcp</i></td><td>DHCPv6 client mode.</td></tr><tr><td><i>pppoe</i></td><td>IPv6 over PPPoE mode.</td></tr><tr><td><i>delegated</i></td><td>IPv6 address with delegated prefix.</td></tr></table>	Option	Description	<i>static</i>	Static setting.	<i>dhcp</i>	DHCPv6 client mode.	<i>pppoe</i>	IPv6 over PPPoE mode.	<i>delegated</i>	IPv6 address with delegated prefix.			
	Option	Description												
	<i>static</i>	Static setting.												
	<i>dhcp</i>	DHCPv6 client mode.												
	<i>pppoe</i>	IPv6 over PPPoE mode.												
<i>delegated</i>	IPv6 address with delegated prefix.													
nd-mode	Neighbor discovery mode.	option	-	basic										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>basic</i></td><td>Do not support SEND.</td></tr><tr><td><i>SEND-compatible</i></td><td>Support SEND.</td></tr></table>	Option	Description	<i>basic</i>	Do not support SEND.	<i>SEND-compatible</i>	Support SEND.							
	Option	Description												
	<i>basic</i>	Do not support SEND.												
<i>SEND-compatible</i>	Support SEND.													
nd-cert	Neighbor discovery certificate.	string	Maximum length: 35											
nd-security-level	Neighbor discovery security level.	integer	Minimum value: 0 Maximum value: 7	0										
nd-timestamp-delta	Neighbor discovery timestamp delta value.	integer	Minimum value: 1 Maximum value: 3600	300										
nd-timestamp-fuzz	Neighbor discovery timestamp fuzz factor.	integer	Minimum value: 1 Maximum value: 60	1										
nd-cga-modifier	Neighbor discovery CGA modifier.	user	Not Specified											
ip6-dns-server-override	Enable/disable using the DNS server acquired by DHCP.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable using the DNS server acquired by DHCP.</td></tr><tr><td><i>disable</i></td><td>Disable using the DNS server acquired by DHCP.</td></tr></table>	Option	Description	<i>enable</i>	Enable using the DNS server acquired by DHCP.	<i>disable</i>	Disable using the DNS server acquired by DHCP.							
	Option	Description												
	<i>enable</i>	Enable using the DNS server acquired by DHCP.												
<i>disable</i>	Disable using the DNS server acquired by DHCP.													
ip6-address	Primary IPv6 address prefix. Syntax: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx.	ipv6-prefix	Not Specified	::/0										

Parameter	Description	Type	Size	Default																		
ip6-allowaccess	Allow management access to the interface.	option	-																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING access.</td></tr><tr><td><i>https</i></td><td>HTTPS access.</td></tr><tr><td><i>ssh</i></td><td>SSH access.</td></tr><tr><td><i>snmp</i></td><td>SNMP access.</td></tr><tr><td><i>http</i></td><td>HTTP access.</td></tr><tr><td><i>telnet</i></td><td>TELNET access.</td></tr><tr><td><i>fgfm</i></td><td>FortiManager access.</td></tr><tr><td><i>fabric</i></td><td>Fabric access.</td></tr></table>	Option	Description	<i>ping</i>	PING access.	<i>https</i>	HTTPS access.	<i>ssh</i>	SSH access.	<i>snmp</i>	SNMP access.	<i>http</i>	HTTP access.	<i>telnet</i>	TELNET access.	<i>fgfm</i>	FortiManager access.	<i>fabric</i>	Fabric access.			
Option	Description																					
<i>ping</i>	PING access.																					
<i>https</i>	HTTPS access.																					
<i>ssh</i>	SSH access.																					
<i>snmp</i>	SNMP access.																					
<i>http</i>	HTTP access.																					
<i>telnet</i>	TELNET access.																					
<i>fgfm</i>	FortiManager access.																					
<i>fabric</i>	Fabric access.																					
ip6-send-adv	Enable/disable sending advertisements about the interface.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending advertisements about this interface.</td></tr><tr><td><i>disable</i></td><td>Disable sending advertisements about this interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending advertisements about this interface.	<i>disable</i>	Disable sending advertisements about this interface.															
Option	Description																					
<i>enable</i>	Enable sending advertisements about this interface.																					
<i>disable</i>	Disable sending advertisements about this interface.																					
icmp6-send-redirect	Enable/disable sending of ICMPv6 redirects.	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending of ICMPv6 redirects.</td></tr><tr><td><i>disable</i></td><td>Disable sending of ICMPv6 redirects.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending of ICMPv6 redirects.	<i>disable</i>	Disable sending of ICMPv6 redirects.															
Option	Description																					
<i>enable</i>	Enable sending of ICMPv6 redirects.																					
<i>disable</i>	Disable sending of ICMPv6 redirects.																					
ip6-manage-flag	Enable/disable the managed flag.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the managed IPv6 flag.</td></tr><tr><td><i>disable</i></td><td>Disable the managed IPv6 flag.</td></tr></table>	Option	Description	<i>enable</i>	Enable the managed IPv6 flag.	<i>disable</i>	Disable the managed IPv6 flag.															
Option	Description																					
<i>enable</i>	Enable the managed IPv6 flag.																					
<i>disable</i>	Disable the managed IPv6 flag.																					
ip6-other-flag	Enable/disable the other IPv6 flag.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the other IPv6 flag.</td></tr><tr><td><i>disable</i></td><td>Disable the other IPv6 flag.</td></tr></table>	Option	Description	<i>enable</i>	Enable the other IPv6 flag.	<i>disable</i>	Disable the other IPv6 flag.															
Option	Description																					
<i>enable</i>	Enable the other IPv6 flag.																					
<i>disable</i>	Disable the other IPv6 flag.																					

Parameter	Description	Type	Size	Default						
ip6-max-interval	IPv6 maximum interval (4 to 1800 sec).	integer	Minimum value: 4 Maximum value: 1800	600						
ip6-min-interval	IPv6 minimum interval (3 to 1350 sec).	integer	Minimum value: 3 Maximum value: 1350	198						
ip6-link-mtu	IPv6 link MTU.	integer	Minimum value: 1280 Maximum value: 16000	0						
ra-send-mtu	Enable/disable sending link MTU in RA packet.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending link MTU in RA packet.</td></tr><tr><td><i>disable</i></td><td>Disable sending link MTU in RA packet.</td></tr></table>				Option	Description	<i>enable</i>	Enable sending link MTU in RA packet.	<i>disable</i>	Disable sending link MTU in RA packet.
	Option	Description								
	<i>enable</i>	Enable sending link MTU in RA packet.								
<i>disable</i>	Disable sending link MTU in RA packet.									
ip6-reachable-time	IPv6 reachable time (milliseconds; 0 means unspecified).	integer	Minimum value: 0 Maximum value: 3600000	0						
ip6-retrans-time	IPv6 retransmit time (milliseconds; 0 means unspecified).	integer	Minimum value: 0 Maximum value: 4294967295	0						
ip6-default-life	Default life (sec).	integer	Minimum value: 0 Maximum value: 9000	1800						
ip6-hop-limit	Hop limit (0 means unspecified).	integer	Minimum value: 0 Maximum value: 255	0						
autoconf	Enable/disable address auto config.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auto-configuration.</td></tr><tr><td><i>disable</i></td><td>Disable auto-configuration.</td></tr></table>				Option	Description	<i>enable</i>	Enable auto-configuration.	<i>disable</i>	Disable auto-configuration.
	Option	Description								
	<i>enable</i>	Enable auto-configuration.								
<i>disable</i>	Disable auto-configuration.									

Parameter	Description	Type	Size	Default						
unique- autoconf-addr	Enable/disable unique auto config address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable unique auto-configuration address.</td></tr><tr><td><i>disable</i></td><td>Disable unique auto-configuration address.</td></tr></table>	Option	Description	<i>enable</i>	Enable unique auto-configuration address.	<i>disable</i>	Disable unique auto-configuration address.			
	Option	Description								
	<i>enable</i>	Enable unique auto-configuration address.								
<i>disable</i>	Disable unique auto-configuration address.									
interface- identifier	IPv6 interface identifier.	ipv6- address	Not Specified	::						
ip6-prefix- mode	Assigning a prefix from DHCP or RA.	option	-	dhcp6						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dhcp6</i></td><td>Use delegated prefix from a DHCPv6 client to form a delegated IPv6 address.</td></tr><tr><td><i>ra</i></td><td>Use prefix from RA to form a delegated IPv6 address.</td></tr></table>	Option	Description	<i>dhcp6</i>	Use delegated prefix from a DHCPv6 client to form a delegated IPv6 address.	<i>ra</i>	Use prefix from RA to form a delegated IPv6 address.			
	Option	Description								
	<i>dhcp6</i>	Use delegated prefix from a DHCPv6 client to form a delegated IPv6 address.								
<i>ra</i>	Use prefix from RA to form a delegated IPv6 address.									
ip6-delegated- prefix-iaid	IAID of obtained delegated-prefix from the upstream interface.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ip6-upstream- interface	Interface name providing delegated information.	string	Maximum length: 15							
ip6-subnet	Subnet to routing prefix. Syntax: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx.	ipv6-prefix	Not Specified	::/0						
dhcp6-relay- service	Enable/disable DHCPv6 relay.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable DHCPv6 relay</td></tr><tr><td><i>enable</i></td><td>Enable DHCPv6 relay.</td></tr></table>	Option	Description	<i>disable</i>	Disable DHCPv6 relay	<i>enable</i>	Enable DHCPv6 relay.			
	Option	Description								
	<i>disable</i>	Disable DHCPv6 relay								
<i>enable</i>	Enable DHCPv6 relay.									
dhcp6-relay- type	DHCPv6 relay type.	option	-	regular						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>regular</i></td><td>Regular DHCP relay.</td></tr></table>	Option	Description	<i>regular</i>	Regular DHCP relay.					
	Option	Description								
<i>regular</i>	Regular DHCP relay.									
dhcp6-relay- source- interface	Enable/disable use of address on this interface as the source address of the relay message.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Use address of the egress interface as source address of the relay message.		
	<i>enable</i>	Use address of this interface as source address of the relay message.		
dhcp6-relay-ip	DHCPv6 relay IP address.	user	Not Specified	
dhcp6-client-options	DHCPv6 client options.	option	-	
	<b>Option</b> <b>Description</b>			
	<i>rapid</i>	Send rapid commit option.		
	<i>iapd</i>	Send including IA-PD option.		
	<i>iana</i>	Send including IA-NA option.		
dhcp6-prefix-delegation	Enable/disable DHCPv6 prefix delegation.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable DHCPv6 prefix delegation.		
	<i>disable</i>	Disable DHCPv6 prefix delegation.		
dhcp6-information-request	Enable/disable DHCPv6 information request.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable DHCPv6 information request.		
	<i>disable</i>	Disable DHCPv6 information request.		
cli-conn6-status	CLI IPv6 connection status.	integer	Minimum value: 0 Maximum value: 4294967295	0
vrrp-virtual-mac6	Enable/disable virtual MAC for VRRP.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable virtual MAC for VRRP.		
	<i>disable</i>	Disable virtual MAC for VRRP.		

Parameter	Description	Type	Size	Default
vrip6_link_local	Link-local IPv6 address of virtual router.	ipv6-address	Not Specified	::

#### config ip6-extra-addr

Parameter	Description	Type	Size	Default

vrip	IP address of the virtual router.	ipv4-address-any	Not Specified	0.0.0.0						
priority	Priority of the virtual router.	integer	Minimum value: 1 Maximum value: 255	100						
adv-interval	Advertisement interval.	integer	Minimum value: 1 Maximum value: 255	1						
start-time	Startup time.	integer	Minimum value: 1 Maximum value: 255	3						
preempt	Enable/disable preempt mode.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable preempt mode.</td></tr><tr><td><i>disable</i></td><td>Disable preempt mode.</td></tr></table>				Option	Description	<i>enable</i>	Enable preempt mode.	<i>disable</i>	Disable preempt mode.
Option	Description									
<i>enable</i>	Enable preempt mode.									
<i>disable</i>	Disable preempt mode.									
accept-mode	Enable/disable accept mode.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable accept mode.</td></tr><tr><td><i>disable</i></td><td>Disable accept mode.</td></tr></table>				Option	Description	<i>enable</i>	Enable accept mode.	<i>disable</i>	Disable accept mode.
Option	Description									
<i>enable</i>	Enable accept mode.									
<i>disable</i>	Disable accept mode.									
vrdst	Monitor the route to this destination.	ipv4-address-any	Not Specified							
vrdst-priority	Priority of the virtual router when the virtual router destination becomes unreachable.	integer	Minimum value: 0 Maximum value: 254	0						
ignore-default-route	Enable/disable ignoring of default route when checking destination.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring of default route when checking destination.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring of default route when checking destination.</td></tr></table>				Option	Description	<i>enable</i>	Enable ignoring of default route when checking destination.	<i>disable</i>	Disable ignoring of default route when checking destination.
Option	Description									
<i>enable</i>	Enable ignoring of default route when checking destination.									
<i>disable</i>	Disable ignoring of default route when checking destination.									

Parameter	Description	Type	Size	Default
status	Enable/disable this VRRP configuration.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable this VRRP configuration.		
	<i>disable</i>	Disable this VRRP configuration.		

### config proxy-arp

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ip	Set IP addresses of proxy ARP.	user	Not Specified	

### config wifi-mac-list

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00

### config wifi-networks

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
wifi-ssid	IEEE 802.11 Service Set Identifier.	string	Maximum length: 32	fortinet
wifi-security	Wireless access security of SSID.	option	-	wpa-personal

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Open.</td></tr><tr><td><i>wep64</i></td><td>WEP64.</td></tr><tr><td><i>wep128</i></td><td>WEP128.</td></tr><tr><td><i>wpa-personal</i></td><td>WPA personal.</td></tr><tr><td><i>wpa-only-personal</i></td><td>WPA personal only.</td></tr><tr><td><i>wpa2-only-personal</i></td><td>WPA2 personal only.</td></tr></table>	Option	Description	<i>open</i>	Open.	<i>wep64</i>	WEP64.	<i>wep128</i>	WEP128.	<i>wpa-personal</i>	WPA personal.	<i>wpa-only-personal</i>	WPA personal only.	<i>wpa2-only-personal</i>	WPA2 personal only.			
	Option	Description																
	<i>open</i>	Open.																
	<i>wep64</i>	WEP64.																
	<i>wep128</i>	WEP128.																
	<i>wpa-personal</i>	WPA personal.																
	<i>wpa-only-personal</i>	WPA personal only.																
<i>wpa2-only-personal</i>	WPA2 personal only.																	
wifi-encrypt	Data encryption.	option	-	AES														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>TKIP</i></td><td>TKIP.</td></tr><tr><td><i>AES</i></td><td>AES.</td></tr></table>	Option	Description	<i>TKIP</i>	TKIP.	<i>AES</i>	AES.											
	Option	Description																
	<i>TKIP</i>	TKIP.																
<i>AES</i>	AES.																	
wifi-keyindex	WEP key index.	integer	Minimum value: 1 Maximum value: 4	1														
wifi-key	WiFi WEP Key.	password	Not Specified															
wifi-passphrase	WiFi pre-shared key for WPA.	password	Not Specified															

## config system ipam

Configure IP address management services.

```

config system ipam
    Description: Configure IP address management services.
    config pools
        Description: Configure IPAM pools.
        edit <name>
            set description {string}
            set subnet {ipv4-classnet}
        next
    end
    config rules
        Description: Configure IPAM allocation rules.
        edit <name>
            set description {string}
            set device <name1>, <name2>, ...
            set interface <name1>, <name2>, ...
            set role [any|lan|...]

```

```

        set pool <name1>, <name2>, ...
        set dhcp [enable|disable]
    next
end
set server-type {option}
set status [enable|disable]
end

```

## config system ipam

Parameter	Description	Type	Size	Default						
server-type	Configure the type of IPAM server to use.	option	-	fabric-root						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fabric-root</i></td><td>Use the IPAM server running on the Security Fabric root.</td></tr></table>				Option	Description	<i>fabric-root</i>	Use the IPAM server running on the Security Fabric root.		
Option	Description									
<i>fabric-root</i>	Use the IPAM server running on the Security Fabric root.									
status	Enable/disable IP address management services.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable integration with IP address management services.</td></tr><tr><td><i>disable</i></td><td>Disable integration with IP address management services.</td></tr></table>				Option	Description	<i>enable</i>	Enable integration with IP address management services.	<i>disable</i>	Disable integration with IP address management services.
Option	Description									
<i>enable</i>	Enable integration with IP address management services.									
<i>disable</i>	Disable integration with IP address management services.									

## config pools

Parameter	Description	Type	Size	Default
name	IPAM pool name.	string	Maximum length: 79	
description	Description.	string	Maximum length: 127	
subnet	Configure IPAM pool subnet, Class A - Class B subnet.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

## config rules

Parameter	Description	Type	Size	Default
name	IPAM rule name.	string	Maximum length: 79	
description	Description.	string	Maximum length: 127	
device <name>	Configure serial number or wildcard of FortiGate to match. FortiGate serial number or wildcard.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default												
interface <name>	Configure name or wildcard of interface to match. Interface name or wildcard.	string	Maximum length: 79													
role	Configure role of interface to match.	option	-	any												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>any</td><td>Match any interface role.</td></tr><tr><td>lan</td><td>Match interface role lan.</td></tr><tr><td>wan</td><td>Match interface role wan.</td></tr><tr><td>dmz</td><td>Match interface role dmz.</td></tr><tr><td>undefined</td><td>Match interface role undefined.</td></tr></table>				Option	Description	any	Match any interface role.	lan	Match interface role lan.	wan	Match interface role wan.	dmz	Match interface role dmz.	undefined	Match interface role undefined.
Option	Description															
any	Match any interface role.															
lan	Match interface role lan.															
wan	Match interface role wan.															
dmz	Match interface role dmz.															
undefined	Match interface role undefined.															
pool <name>	Configure name of IPAM pool to use. Ipam pool name.	string	Maximum length: 79													
dhcp	Enable/disable DHCP server for matching IPAM interfaces.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable DHCP server on matched IPAM interface.</td></tr><tr><td>disable</td><td>Disable DHCP server on matched IPAM interface.</td></tr></table>				Option	Description	enable	Enable DHCP server on matched IPAM interface.	disable	Disable DHCP server on matched IPAM interface.						
Option	Description															
enable	Enable DHCP server on matched IPAM interface.															
disable	Disable DHCP server on matched IPAM interface.															

## config system ipip-tunnel

Configure IP in IP Tunneling.

```
config system ipip-tunnel
    Description: Configure IP in IP Tunneling.
    edit <name>
        set auto-asic-offload [enable|disable]
        set interface {string}
        set local-gw {ipv4-address-any}
        set remote-gw {ipv4-address}
        set use-sdwan [disable|enable]
    next
end
```

## config system ipip-tunnel

Parameter	Description	Type	Size	Default
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable auto ASIC offloading.		
	<i>disable</i>	Disable ASIC offloading.		
interface	Interface name that is associated with the incoming traffic from available options.	string	Maximum length: 15	
local-gw	IPv4 address for the local gateway.	ipv4-address-any	Not Specified	0.0.0.0
name	IPIP Tunnel name.	string	Maximum length: 15	
remote-gw	IPv4 address for the remote gateway.	ipv4-address	Not Specified	0.0.0.0
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.		
	<i>enable</i>	Enable use of SD-WAN to reach remote gateway.		

\* This parameter may not exist in some models.

## config system ips-urlfilter-dns

Configure IPS URL filter DNS servers.

```
config system ips-urlfilter-dns
    Description: Configure IPS URL filter DNS servers.
    edit <address>
        set ipv6-capability [enable|disable]
        set status [enable|disable]
    next
end
```

## config system ips-urlfilter-dns

Parameter	Description	Type	Size	Default
address	DNS server IP address.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
ipv6-capability	Enable/disable this server for IPv6 queries.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
status	Enable/disable using this DNS server for IPS URL filter DNS queries.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable this DNS server for IPS URL filter DNS queries.		
	<i>disable</i>	Disable this DNS server for IPS URL filter DNS queries.		

## config system ips-urlfilter-dns6

Configure IPS URL filter IPv6 DNS servers.

```
config system ips-urlfilter-dns6
    Description: Configure IPS URL filter IPv6 DNS servers.
    edit <address6>
        set status [enable|disable]
    next
end
```

## config system ips-urlfilter-dns6

Parameter	Description	Type	Size	Default
address6	IPv6 address of DNS server.	ipv6-address	Not Specified	::
status	Enable/disable this server for IPv6 DNS queries.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

## config system ips

Configure IPS system settings.

```

config system ips
    Description: Configure IPS system settings.
    set override-signature-hold-by-id [enable|disable]
    set signature-hold-time {user}
end

```

## config system ips

Parameter	Description	Type	Size	Default
override-signature-hold-by-id	Enable/disable override of hold of triggering signatures that are specified by IDs regardless of hold.	option	-	enable
	Option	Description		
	<i>enable</i>	Allow the signatures specified by IDs to be triggered even if they are on hold.		
	<i>disable</i>	Do not trigger the signatures that are on hold.		
signature-hold-time	Time to hold and monitor IPS signatures. Format <#d##h>.	user	Not Specified	0h

## config system ipsec-aggregate

Configure an aggregate of IPsec tunnels.

```

config system ipsec-aggregate
    Description: Configure an aggregate of IPsec tunnels.
    edit <name>
        set algorithm [L3|L4|...]
        set member <tunnel-name1>, <tunnel-name2>, ...
    next
end

```

## config system ipsec-aggregate

Parameter	Description	Type	Size	Default
algorithm	Frame distribution algorithm.	option	-	round-robin
	Option	Description		
	<i>L3</i>	Use layer 3 address for distribution.		
	<i>L4</i>	Use layer 4 information for distribution.		
	<i>round-robin</i>	Per-packet round-robin distribution.		
	<i>redundant</i>	Use first tunnel that is up for all traffic.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>weighted-round-robin</i>	Weighted round-robin distribution.		
member <tunnel-name>	Member tunnels of the aggregate. Tunnel name.	string	Maximum length: 79	
name	IPsec aggregate name.	string	Maximum length: 15	

## config system ipv6-neighbor-cache

Configure IPv6 neighbor cache table.

```
config system ipv6-neighbor-cache
    Description: Configure IPv6 neighbor cache table.
    edit <id>
        set interface {string}
        set ipv6 {ipv6-address}
        set mac {mac-address}
    next
end
```

## config system ipv6-neighbor-cache

Parameter	Description	Type	Size	Default
id	Unique integer ID of the entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Select the associated interface name from available options.	string	Maximum length: 15	
ipv6	IPv6 address (format: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx).	ipv6-address	Not Specified	::
mac	MAC address (format: xx:xx:xx:xx:xx:xx).	mac-address	Not Specified	00:00:00:00:00:00

## config system ipv6-tunnel

Configure IPv6/IPv4 in IPv6 tunnel.

```

config system ipv6-tunnel
  Description: Configure IPv6/IPv4 in IPv6 tunnel.
  edit <name>
    set auto-asic-offload [enable|disable]
    set destination {ipv6-address}
    set interface {string}
    set source {ipv6-address}
    set use-sdwan [disable|enable]
  next
end

```

## config system ipv6-tunnel

Parameter	Description	Type	Size	Default						
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable auto ASIC offloading.</td></tr><tr><td>disable</td><td>Disable ASIC offloading.</td></tr></table>				Option	Description	enable	Enable auto ASIC offloading.	disable	Disable ASIC offloading.
	Option	Description								
	enable	Enable auto ASIC offloading.								
disable	Disable ASIC offloading.									
destination	Remote IPv6 address of the tunnel.	ipv6-address	Not Specified	::						
interface	Interface name.	string	Maximum length: 15							
name	IPv6 tunnel name.	string	Maximum length: 15							
source	Local IPv6 address of the tunnel.	ipv6-address	Not Specified	::						
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of SD-WAN to reach remote gateway.</td></tr><tr><td>enable</td><td>Enable use of SD-WAN to reach remote gateway.</td></tr></table>				Option	Description	disable	Disable use of SD-WAN to reach remote gateway.	enable	Enable use of SD-WAN to reach remote gateway.
	Option	Description								
	disable	Disable use of SD-WAN to reach remote gateway.								
enable	Enable use of SD-WAN to reach remote gateway.									

\* This parameter may not exist in some models.

        set update-policy-route [enable|disable]
        set update-static-route [enable|disable]
    next
end

```

## config system link-monitor

Parameter	Description	Type	Size	Default
addr-mode	Address mode (IPv4 or IPv6).	option	-	ipv4
	Option	Description		
	ipv4	IPv4 mode.		
	ipv6	IPv6 mode.		
class-id	Traffic class ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
diffservcode	Differentiated services code point (DSCP) in the IP header of the probe packet.	user	Not Specified	
fail-weight	Threshold weight to trigger link failure alert.	integer	Minimum value: 0 Maximum value: 255	0
failtime	Number of retry attempts before the server is considered down.	integer	Minimum value: 1 Maximum value: 3600	5
gateway-ip	Gateway IP address used to probe the server.	ipv4-address-any	Not Specified	0.0.0.0
gateway-ip6	Gateway IPv6 address used to probe the server.	ipv6-address	Not Specified	::
ha-priority	HA election priority.	integer	Minimum value: 1 Maximum value: 50	1
http-agent	String in the http-agent field in the HTTP header.	string	Maximum length: 1024	Chrome/ Safari/

Parameter	Description	Type	Size	Default
http-get	If you are monitoring an HTML server you can send an HTTP-GET request with a custom string. Use this option to define the string.	string	Maximum length: 1024	/
http-match	String that you expect to see in the HTTP-GET requests of the traffic to be monitored.	string	Maximum length: 1024	
interval	Detection interval in milliseconds.	integer	Minimum value: 20 Maximum value: 3600000	500
name	Link monitor name.	string	Maximum length: 35	
packet-size	Packet size of a TWAMP test session.	integer	Minimum value: 64 Maximum value: 1024	64
password	TWAMP controller password in authentication mode.	password	Not Specified	
port	Port number of the traffic to be used to monitor the server.	integer	Minimum value: 1 Maximum value: 65535	0
probe-count	Number of most recent probes that should be used to calculate latency and jitter.	integer	Minimum value: 5 Maximum value: 30	30
probe-timeout	Time to wait before a probe packet is considered lost.	integer	Minimum value: 20 Maximum value: 5000	500
protocol	Protocols used to monitor the server.	option	-	ping
	<b>Option</b> <b>Description</b>			
	<i>ping</i> PING link monitor.			
	<i>tcp-echo</i> TCP echo link monitor.			
	<i>udp-echo</i> UDP echo link monitor.			
	<i>http</i> HTTP-GET link monitor.			
	<i>twamp</i> TWAMP link monitor.			

Parameter	Description	Type	Size	Default						
recoverytime	Number of successful responses received before server is considered recovered.	integer	Minimum value: 1 Maximum value: 3600	5						
route <subnet>	Subnet to monitor. IP and netmask (x.x.x.x/y).	string	Maximum length: 79							
security-mode	Twamp controller security mode.	option	-	none						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Unauthenticated mode.</td></tr><tr><td><i>authentication</i></td><td>Authenticated mode.</td></tr></table>				Option	Description	<i>none</i>	Unauthenticated mode.	<i>authentication</i>	Authenticated mode.
Option	Description									
<i>none</i>	Unauthenticated mode.									
<i>authentication</i>	Authenticated mode.									
server <address>	IP address of the server(s) to be monitored. Server address.	string	Maximum length: 79							
server-config	Mode of server configuration.	option	-	default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>All servers share the same attributes.</td></tr><tr><td><i>individual</i></td><td>Some attributes can be specified for individual servers.</td></tr></table>				Option	Description	<i>default</i>	All servers share the same attributes.	<i>individual</i>	Some attributes can be specified for individual servers.
Option	Description									
<i>default</i>	All servers share the same attributes.									
<i>individual</i>	Some attributes can be specified for individual servers.									
server-type	Server type (static or dynamic).	option	-	static						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Static servers.</td></tr><tr><td><i>dynamic</i></td><td>Dynamic servers.</td></tr></table>				Option	Description	<i>static</i>	Static servers.	<i>dynamic</i>	Dynamic servers.
Option	Description									
<i>static</i>	Static servers.									
<i>dynamic</i>	Dynamic servers.									
service-detection	Only use monitor to read quality values. If enabled, static routes and cascade interfaces will not be updated.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Only use monitor for service-detection.</td></tr><tr><td><i>disable</i></td><td>Monitor will update routes/interfaces on link failure.</td></tr></table>				Option	Description	<i>enable</i>	Only use monitor for service-detection.	<i>disable</i>	Monitor will update routes/interfaces on link failure.
Option	Description									
<i>enable</i>	Only use monitor for service-detection.									
<i>disable</i>	Monitor will update routes/interfaces on link failure.									
source-ip	Source IP address used in packet to the server.	ipv4-address-any	Not Specified	0.0.0.0						
source-ip6	Source IPv6 address used in packet to the server.	ipv6-address	Not Specified	::						

Parameter	Description	Type	Size	Default						
srcintf	Interface that receives the traffic to be monitored.	string	Maximum length: 15							
status	Enable/disable this link monitor.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable this link monitor.</td></tr><tr><td><i>disable</i></td><td>Disable this link monitor.</td></tr></table>	Option	Description	<i>enable</i>	Enable this link monitor.	<i>disable</i>	Disable this link monitor.			
Option	Description									
<i>enable</i>	Enable this link monitor.									
<i>disable</i>	Disable this link monitor.									
update-cascade-interface	Enable/disable update cascade interface.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable update cascade interface.</td></tr><tr><td><i>disable</i></td><td>Disable update cascade interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable update cascade interface.	<i>disable</i>	Disable update cascade interface.			
Option	Description									
<i>enable</i>	Enable update cascade interface.									
<i>disable</i>	Disable update cascade interface.									
update-policy-route	Enable/disable updating the policy route.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable updating the policy route.</td></tr><tr><td><i>disable</i></td><td>Disable updating the policy route.</td></tr></table>	Option	Description	<i>enable</i>	Enable updating the policy route.	<i>disable</i>	Disable updating the policy route.			
Option	Description									
<i>enable</i>	Enable updating the policy route.									
<i>disable</i>	Disable updating the policy route.									
update-static-route	Enable/disable updating the static route.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable updating the static route.</td></tr><tr><td><i>disable</i></td><td>Disable updating the static route.</td></tr></table>	Option	Description	<i>enable</i>	Enable updating the static route.	<i>disable</i>	Disable updating the static route.			
Option	Description									
<i>enable</i>	Enable updating the static route.									
<i>disable</i>	Disable updating the static route.									

### config server-list

Parameter	Description	Type	Size	Default
id	Server ID.	integer	Minimum value: 1 Maximum value: 32	0
dst	IP address of the server to be monitored.	string	Maximum length: 64	
protocol	Protocols used to monitor the server.	option	-	ping

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING link monitor.</td></tr><tr><td><i>tcp-echo</i></td><td>TCP echo link monitor.</td></tr><tr><td><i>udp-echo</i></td><td>UDP echo link monitor.</td></tr><tr><td><i>http</i></td><td>HTTP-GET link monitor.</td></tr><tr><td><i>twamp</i></td><td>TWAMP link monitor.</td></tr></table>	Option	Description	<i>ping</i>	PING link monitor.	<i>tcp-echo</i>	TCP echo link monitor.	<i>udp-echo</i>	UDP echo link monitor.	<i>http</i>	HTTP-GET link monitor.	<i>twamp</i>	TWAMP link monitor.			
	Option	Description														
	<i>ping</i>	PING link monitor.														
	<i>tcp-echo</i>	TCP echo link monitor.														
	<i>udp-echo</i>	UDP echo link monitor.														
	<i>http</i>	HTTP-GET link monitor.														
<i>twamp</i>	TWAMP link monitor.															
port	Port number of the traffic to be used to monitor the server.	integer	Minimum value: 1 Maximum value: 65535	0												
weight	Weight of the monitor to this dst.	integer	Minimum value: 0 Maximum value: 255	0

connection-hot-swap *	Set connection-based SIM card hot swap time interval.	option	-	5-minutes								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>5-minutes</td><td>Perform SIM card hot swap if current card is not able to connect for 5 minutes.</td></tr><tr><td>10-minutes</td><td>Perform SIM card hot swap if current card is not able to connect for 10 minutes.</td></tr><tr><td>never</td><td>SIM card hot swap based on card presence only.</td></tr></table>				Option	Description	5-minutes	Perform SIM card hot swap if current card is not able to connect for 5 minutes.	10-minutes	Perform SIM card hot swap if current card is not able to connect for 10 minutes.	never	SIM card hot swap based on card presence only.
Option	Description											
5-minutes	Perform SIM card hot swap if current card is not able to connect for 5 minutes.											
10-minutes	Perform SIM card hot swap if current card is not able to connect for 10 minutes.											
never	SIM card hot swap based on card presence only.											
data-limit *	LTE Modem data limit mega bytes, 0 for unlimited data.	integer	Minimum value: 0 Maximum value: 100000	0								
data-usage-tracking *	Enable/disable data usage tracking.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable data usage tracking.</td></tr><tr><td>disable</td><td>Disable data usage tracking.</td></tr></table>				Option	Description	enable	Enable data usage tracking.	disable	Disable data usage tracking.		
Option	Description											
enable	Enable data usage tracking.											
disable	Disable data usage tracking.											
extra-init	Extra initialization string for USB LTE/WIMAX devices.	string	Maximum length: 127									
force-wireless-profile *	Force to use wireless profile index , 0 if don't force.	integer	Minimum value: 0 Maximum value: 16	0								
gps-port *	Modem GPS port index.	integer	Minimum value: 0 Maximum value: 20	255								
gps-service *	Enable/disable GPS daemon.	option	-	enable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable GPS daemon.		
	<i>disable</i>	Disable GPS daemon.		
holddown-timer	Hold down timer.	integer	Minimum value: 10 Maximum value: 60	30
image-preference *	Modem Image Preference.	option	-	auto-sim
	<b>Option</b>	<b>Description</b>		
	<i>generic</i>	Generic Firmware.		
	<i>att</i>	AT&T Firmware.		
	<i>verizon</i>	Verizon Firmware.		
	<i>telus</i>	Telus Firmware.		
	<i>docomo</i>	DOCOMO Firmware.		
	<i>softbank</i>	Softbank Firmware.		
	<i>sprint</i>	Sprint Firmware.		
	<i>auto-sim</i>	Auto Select Firmware.		
<i>no-change</i>	Do not change.			
interface	The interface that the modem is acting as a redundant interface for.	string	Maximum length: 63	
manual-handover *	Enable/Disable manual handover from 3G to LTE network.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable 3G to LTE manual handover.		
	<i>disable</i>	Disable 3G to LTE manual handover.		
mode	Modem operation mode.	option	-	standalone
	<b>Option</b>	<b>Description</b>		
	<i>standalone</i>	Standalone modem operation mode.		
	<i>redundant</i>	Redundant modem operation mode where the modem is used as a backup interface.		

Parameter	Description	Type	Size	Default								
modem-port	Modem port index.	integer	Minimum value: 0 Maximum value: 20	255								
network-type *	Wireless network type.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatic detection</td></tr><tr><td>umts-3g</td><td>UMTS 3G -- For networks use GSM technology</td></tr><tr><td>lte</td><td>LTE</td></tr></table>	Option	Description	auto	Automatic detection	umts-3g	UMTS 3G -- For networks use GSM technology	lte	LTE			
Option	Description											
auto	Automatic detection											
umts-3g	UMTS 3G -- For networks use GSM technology											
lte	LTE											
override-gateway *	Enable/disable LTE gateway override.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Override gateway to 0.0.0.0</td></tr><tr><td>disable</td><td>Use gateway as assigned by ISP DHCP server.</td></tr></table>	Option	Description	enable	Override gateway to 0.0.0.0	disable	Use gateway as assigned by ISP DHCP server.					
Option	Description											
enable	Override gateway to 0.0.0.0											
disable	Use gateway as assigned by ISP DHCP server.											
passwd	Authentication password for PDP-IP packet data calls.	password	Not Specified									
sim-hot-swap *	Enable/disable SIM card auto detection and hot swap.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable SIM card auto detection.</td></tr><tr><td>disable</td><td>Disable SIM card auto detection.</td></tr></table>	Option	Description	enable	Enable SIM card auto detection.	disable	Disable SIM card auto detection.					
Option	Description											
enable	Enable SIM card auto detection.											
disable	Disable SIM card auto detection.											
sim-slot *	SIM card slot. 1: right slot. 2: left slot.	integer	Minimum value: 1 Maximum value: 2	1								
sim1-pin *	PIN code for SIM #1 (if applicable).	password	Not Specified									
sim2-pin *	PIN code for SIM #2 (if applicable).	password	Not Specified									
status	Enable/disable USB LTE/WIMAX device.	option	-	disable **								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable USB LTE/WIMA device.		
	<i>disable</i>	Disable USB LTE/WIMA device.		
username	Authentication username for PDP-IP packet data calls.	string	Maximum length: 63	

\* This parameter may not exist in some models.

\*\* Values may differ between models.

## config system mac-address-table

Configure MAC address tables.

```
config system mac-address-table
    Description: Configure MAC address tables.
    edit <mac>
        set interface {string}
        set reply-substitute {mac-address}
    next
end
```

## config system mac-address-table

Parameter	Description	Type	Size	Default
interface	Interface name.	string	Maximum length: 35	
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00
reply-substitute	New MAC for reply traffic.	mac-address	Not Specified	00:00:00:00:00:00

## config system management-tunnel

Management tunnel configuration.

```
config system management-tunnel
    Description: Management tunnel configuration.
    set allow-collect-statistics [enable|disable]
    set allow-config-restore [enable|disable]
    set allow-push-configuration [enable|disable]
    set allow-push-firmware [enable|disable]
    set authorized-manager-only [enable|disable]
    set serial-number {user}
```

```

set status [enable|disable]
end

```

## config system management-tunnel

Parameter	Description	Type	Size	Default
allow-collect-statistics	Enable/disable collection of run time statistics.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable collection of run time statistics.		
	<i>disable</i>	Disable collection of run time statistics.		
allow-config-restore	Enable/disable allow config restore.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable allow config restore.		
	<i>disable</i>	Disable allow config restore.		
allow-push-configuration	Enable/disable push configuration.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable push configuration.		
	<i>disable</i>	Disable push configuration.		
allow-push-firmware	Enable/disable push firmware.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable push firmware.		
	<i>disable</i>	Disable push firmware.		
authorized-manager-only	Enable/disable restriction of authorized manager only.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable restriction of authorized manager only.		
	<i>disable</i>	Disable restriction of authorized manager only.		
serial-number	Serial number.	user	Not Specified	

Parameter	Description	Type	Size	Default
status	Enable/disable FGFM tunnel.	option	-	enable
	Option			
	enable	Enable management tunnel.		
	disable	Disable management tunnel.		

## config system mobile-tunnel

Configure Mobile tunnels, an implementation of Network Mobility (NEMO) extensions for Mobile IPv4 RFC5177.

```
config system mobile-tunnel
```

Description: Configure Mobile tunnels, an implementation of Network Mobility (NEMO) extensions for Mobile IPv4 RFC5177.

```
edit <name>
    set hash-algorithm {option}
    set home-address {ipv4-address}
    set home-agent {ipv4-address}
    set lifetime {integer}
    set n-mhae-key {password_aes256}
    set n-mhae-key-type [ascii|base64]
    set n-mhae-spi {integer}
    config network
        Description: NEMO network configuration.
        edit <id>
            set interface {string}
            set prefix {ipv4-classnet}
        next
    end
    set reg-interval {integer}
    set reg-retry {integer}
    set renew-interval {integer}
    set roaming-interface {string}
    set status [disable|enable]
    set tunnel-mode {option}
next
end
```

## config system mobile-tunnel

Parameter	Description	Type	Size	Default
hash-algorithm	Hash Algorithm (Keyed MD5).	option	-	hmac-md5
	Option	Description		
	<i>hmac-md5</i>	Keyed MD5.		

Parameter	Description	Type	Size	Default						
home-address	Home IP address (Format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0						
home-agent	IPv4 address of the NEMO HA (Format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0						
lifetime	NMMO HA registration request lifetime.	integer	Minimum value: 180 Maximum value: 65535	65535						
n-mhae-key	NEMO authentication key.	password_aes256	Not Specified							
n-mhae-key-type	NEMO authentication key type (ASCII or base64).	option	-	ascii						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ascii</td><td>The authentication key is an ASCII string.</td></tr><tr><td>base64</td><td>The authentication key is Base64 encoded.</td></tr></table>				Option	Description	ascii	The authentication key is an ASCII string.	base64	The authentication key is Base64 encoded.
Option	Description									
ascii	The authentication key is an ASCII string.									
base64	The authentication key is Base64 encoded.									
n-mhae-spi	NEMO authentication SPI.	integer	Minimum value: 0 Maximum value: 4294967295	256						
name	Tunnel name.	string	Maximum length: 15							
reg-interval	NMMO HA registration interval.	integer	Minimum value: 5 Maximum value: 300	5						
reg-retry	Maximum number of NMMO HA registration retries.	integer	Minimum value: 1 Maximum value: 30	3						
renew-interval	Time before lifetime expiration to send NMMO HA re-registration.	integer	Minimum value: 5 Maximum value: 60	60						
roaming-interface	Select the associated interface name from available options.	string	Maximum length: 15							
status	Enable/disable this mobile tunnel.	option	-	enable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable this mobile tunnel.		
	<i>enable</i>	Enable this mobile tunnel.		
tunnel-mode	NEMO tunnel mode (GRE tunnel).	option	-	gre
	<b>Option</b>	<b>Description</b>		
	<i>gre</i>	GRE tunnel.		

## config network

Parameter	Description	Type	Size	Default
id	Network entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Select the associated interface name from available options.	string	Maximum length: 15	
prefix	Class IP and Netmask with correction (Format:xxx.xxx.xxx.xxx xxx.xxx.xxx.xxx or xxx.xxx.xxx.xxx/x).	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

## config system modem

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate VM64.

### Configure MODEM.

```
config system modem
  Description: Configure MODEM.
  set action [dial|stop|...]
  set altmode [enable|disable]
  set authtype1 {option1}, {option2}, ...
  set authtype2 {option1}, {option2}, ...

set username3 {string}
set wireless-port {integer}

```

end

## config system modem

Parameter	Description	Type	Size	Default
action	Dial up/stop MODEM.	option	-	stop
	<b>Option</b>	<b>Description</b>		
	<i>dial</i>	Dial up number.		
	<i>stop</i>	Stop dialup.		
	<i>none</i>	No action.		
altmode	Enable/disable altmode for installations using PPP in China.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
authtype1	Allowed authentication types for ISP 1.	option	-	pap chap mschap mschapv2

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>pap</i>	PAP		
	<i>chap</i>	CHAP		
	<i>mschap</i>	MSCHAP		
	<i>mschapv2</i>	MSCHAPv2		
authtype2	Allowed authentication types for ISP 2.	option	-	pap chap mschap mschapv2
	<b>Option</b>	<b>Description</b>		
	<i>pap</i>	PAP		
	<i>chap</i>	CHAP		
	<i>mschap</i>	MSCHAP		
	<i>mschapv2</i>	MSCHAPv2		
authtype3	Allowed authentication types for ISP 3.	option	-	pap chap mschap mschapv2
	<b>Option</b>	<b>Description</b>		
	<i>pap</i>	PAP		
	<i>chap</i>	CHAP		
	<i>mschap</i>	MSCHAP		
	<i>mschapv2</i>	MSCHAPv2		
auto-dial	Enable/disable auto-dial after a reboot or disconnection.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
connect-timeout	Connection completion timeout.	integer	Minimum value: 30 Maximum value: 255	90
dial-cmd1	Dial command (this is often an ATD or ATDT command).	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
dial-cmd2	Dial command (this is often an ATD or ATDT command).	string	Maximum length: 63							
dial-cmd3	Dial command (this is often an ATD or ATDT command).	string	Maximum length: 63							
dial-on-demand	Enable/disable to dial the modem when packets are routed to the modem interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
distance	Distance of learned routes.	integer	Minimum value: 1 Maximum value: 255	1						
dont-send-CR1	Do not send CR when connected (ISP1).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
dont-send-CR2	Do not send CR when connected (ISP2).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
dont-send-CR3	Do not send CR when connected (ISP3).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
extra-init1	Extra initialization string to ISP 1.	string	Maximum length: 127							
extra-init2	Extra initialization string to ISP 2.	string	Maximum length: 127							

Parameter	Description	Type	Size	Default								
extra-init3	Extra initialization string to ISP 3.	string	Maximum length: 127									
holddown-timer	Hold down timer in seconds.	integer	Minimum value: 1 Maximum value: 60	60								
idle-timer	MODEM connection idle time.	integer	Minimum value: 1 Maximum value: 9999	5								
interface	Name of redundant interface.	string	Maximum length: 63									
lockdown-lac	Allow connection only to the specified Location Area Code (LAC).	string	Maximum length: 127									
mode	Set MODEM operation mode to redundant or standalone.	option	-	standalone								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standalone</i></td><td>Standalone.</td></tr><tr><td><i>redundant</i></td><td>Redundant for an interface.</td></tr></table>				Option	Description	<i>standalone</i>	Standalone.	<i>redundant</i>	Redundant for an interface.		
Option	Description											
<i>standalone</i>	Standalone.											
<i>redundant</i>	Redundant for an interface.											
network-init	AT command to set the Network name/type (AT+COPS=<mode>,[<format>,<oper>[,<AcT>]]).	string	Maximum length: 127									
passwd1	Password to access the specified dialup account.	password	Not Specified									
passwd2	Password to access the specified dialup account.	password	Not Specified									
passwd3	Password to access the specified dialup account.	password	Not Specified									
peer-modem1	Specify peer MODEM type for phone1.	option	-	generic								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>generic</i></td><td>All other modem type.</td></tr><tr><td><i>actiontec</i></td><td>ActionTec modem.</td></tr><tr><td><i>ascend_TNT</i></td><td>Ascend TNT modem.</td></tr></table>				Option	Description	<i>generic</i>	All other modem type.	<i>actiontec</i>	ActionTec modem.	<i>ascend_TNT</i>	Ascend TNT modem.
Option	Description											
<i>generic</i>	All other modem type.											
<i>actiontec</i>	ActionTec modem.											
<i>ascend_TNT</i>	Ascend TNT modem.											
peer-modem2	Specify peer MODEM type for phone2.	option	-	generic								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>generic</i></td><td>All other modem type.</td></tr></table>				Option	Description	<i>generic</i>	All other modem type.				
Option	Description											
<i>generic</i>	All other modem type.											

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>actiontec</i>	ActionTec modem.		
	<i>ascend_TNT</i>	Ascend TNT modem.		
peer-modem3	Specify peer MODEM type for phone3.	option	-	generic
	<b>Option</b>	<b>Description</b>		
	<i>generic</i>	All other modem type.		
	<i>actiontec</i>	ActionTec modem.		
	<i>ascend_TNT</i>	Ascend TNT modem.		
phone1	Phone number to connect to the dialup account (must not contain spaces, and should include standard special characters).	string	Maximum length: 63	
phone2	Phone number to connect to the dialup account (must not contain spaces, and should include standard special characters).	string	Maximum length: 63	
phone3	Phone number to connect to the dialup account (must not contain spaces, and should include standard special characters).	string	Maximum length: 63	
pin-init	AT command to set the PIN (AT+PIN=<pin>).	string	Maximum length: 127	
ppp-echo-request1	Enable/disable PPP echo-request to ISP 1.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
ppp-echo-request2	Enable/disable PPP echo-request to ISP 2.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
ppp-echo-request3	Enable/disable PPP echo-request to ISP 3.	option	-	enable

Parameter	Description	Type	Size	Default

	<i>enable</i>	Enable setting.																										
<i>disable</i>	Disable setting.																											
traffic-check	Enable/disable traffic-check.	option	-	disable																								

Parameter	Description	Type	Size	Default
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
username1	User name to access the specified dialup account.	string	Maximum length: 63	
username2	User name to access the specified dialup account.	string	Maximum length: 63	
username3	User name to access the specified dialup account.	string	Maximum length: 63	
wireless-port	Enter wireless port number: 0 for default, 1 for first port, and so on.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config system nd-proxy

Configure IPv6 neighbor discovery proxy (RFC4389).

```
config system nd-proxy
    Description: Configure IPv6 neighbor discovery proxy (RFC4389).
    set member <interface-name1>, <interface-name2>, ...
    set status [enable|disable]
end
```

## config system nd-proxy

Parameter	Description	Type	Size	Default						
member <interface-name>	Interfaces using the neighbor discovery proxy. Interface name.	string	Maximum length: 79							
status	Enable/disable neighbor discovery proxy.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable neighbor discovery proxy.</td></tr><tr><td><i>disable</i></td><td>Disable neighbor discovery proxy.</td></tr></table>				Option	Description	<i>enable</i>	Enable neighbor discovery proxy.	<i>disable</i>	Disable neighbor discovery proxy.
Option	Description									
<i>enable</i>	Enable neighbor discovery proxy.									
<i>disable</i>	Disable neighbor discovery proxy.									

## config system netflow

Configure NetFlow.

```
config system netflow
  Description: Configure NetFlow.
  set active-flow-timeout {integer}
  set collector-ip {string}

end
```

## config system netflow

Parameter	Description	Type	Size	Default
active-flow-timeout	Timeout to report active flows.	integer	Minimum value: 60 Maximum value: 3600	1800
collector-ip	Collector IP.	string	Maximum length: 63	
collector-port	NetFlow collector port number.	integer	Minimum value: 0 Maximum value: 65535	2055
inactive-flow-timeout	Timeout for periodic report of finished flows.	integer	Minimum value: 10 Maximum value: 600	15
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
		Option	Description	
		auto	Set outgoing interface automatically.	
		sdwan	Set outgoing interface by SD-WAN or policy routing rules.	
		specify	Set outgoing interface manually.	

Parameter	Description	Type	Size	Default
source-ip	Source IP address for communication with the NetFlow agent.	string	Maximum length: 63	
template-tx-counter	Counter of flowset records before resending a template flowset record.	integer	Minimum value: 10 Maximum value: 6000	20
template-tx-timeout	Timeout for periodic template flowset transmission.	integer	Minimum value: 60 Maximum value: 86400	1800

## config system network-visibility

Configure network visibility settings.

```
config system network-visibility
    Description: Configure network visibility settings.
    set destination-hostname-visibility [disable|enable]
    set destination-location [disable|enable]
    set destination-visibility [disable|enable]
    set hostname-limit {integer}
    set hostname-ttl {integer}
    set source-location [disable|enable]
end
```

## config system network-visibility

Parameter	Description	Type	Size	Default
destination-hostname-visibility	Enable/disable logging of destination hostname visibility.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable logging of destination hostname visibility.		
	<i>enable</i>	Enable logging of destination hostname visibility.		
destination-location	Enable/disable logging of destination geographical location visibility.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable logging of destination geographical location visibility.		
	<i>enable</i>	Enable logging of destination geographical location visibility.		

Parameter	Description	Type	Size	Default
destination-visibility	Enable/disable logging of destination visibility.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable logging of destination visibility.		
	<i>enable</i>	Enable logging of destination visibility.		
hostname-limit	Limit of the number of hostname table entries.	integer	Minimum value: 0 Maximum value: 50000	5000
hostname-ttl	TTL of hostname table entries.	integer	Minimum value: 60 Maximum value: 86400	86400
source-location	Enable/disable logging of source geographical location visibility.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable logging of source geographical location visibility.		
	<i>enable</i>	Enable logging of source geographical location visibility.

	allow	Allow IPv4 with strict source record route option to pass.										
	drop	Drop IPv4 with strict source record route option.										
trap-to-host	Forward IPv4 with strict source record route option to FortiOS.											
ipv4-optlsrr	Loose source record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with loose source record route option to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with loose source record route option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with loose source record route option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with loose source record route option to pass.	drop	Drop IPv4 with loose source record route option.	trap-to-host	Forward IPv4 with loose source record route option to FortiOS.			
	Option	Description										
	allow	Allow IPv4 with loose source record route option to pass.										
	drop	Drop IPv4 with loose source record route option.										
trap-to-host	Forward IPv4 with loose source record route option to FortiOS.											
ipv4-optstream	Stream option anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with stream option to pass.		
	<i>drop</i>	Drop IPv4 with stream option.		
	<i>trap-to-host</i>	Forward IPv4 with stream option to FortiOS.		
ipv4-optsecurity	Security option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with security option to pass.		
	<i>drop</i>	Drop IPv4 with security option.		
	<i>trap-to-host</i>	Forward IPv4 with security option to FortiOS.		
ipv4-opttimestamp	Timestamp option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with timestamp option to pass.		
	<i>drop</i>	Drop IPv4 with timestamp option.		
	<i>trap-to-host</i>	Forward IPv4 with timestamp option to FortiOS.		
ipv4-csum-err	Invalid IPv4 IP checksum anomalies.	option	-	drop
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv4 invalid IP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid IP checksum to main CPU for processing.		
tcp-csum-err	Invalid IPv4 TCP checksum anomalies.	option	-	drop
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv4 invalid TCP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid TCP checksum to main CPU for processing.		
udp-csum-err	Invalid IPv4 UDP checksum anomalies.	option	-	drop
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv4 invalid UDP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid UDP checksum to main CPU for processing.		
icmp-csum-err	Invalid IPv4 ICMP checksum anomalies.	option	-	drop

Parameter	Description	Type	Size	Default
	Option	Description		
	drop	Drop IPv4 invalid ICMP checksum.		
	trap-to-host	Forward IPv4 invalid ICMP checksum to main CPU for processing.		
ipv6-land	Land anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 land attack to pass.		
	drop	Drop IPv6 land attack.		
	trap-to-host	Forward IPv6 land attack to FortiOS.		
ipv6-proto-err	Layer 4 invalid protocol anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 L4 invalid protocol to pass.		
	drop	Drop IPv6 L4 invalid protocol.		
	trap-to-host	Forward IPv6 L4 invalid protocol to FortiOS.		
ipv6-unknpt	Unknown option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with unknown options to pass.		
	drop	Drop IPv6 with unknown options.		
	trap-to-host	Forward IPv6 with unknown options to FortiOS.		
ipv6-saddr-err	Source address as multicast anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with source address as multicast to pass.		
	drop	Drop IPv6 with source address as multicast.		
	trap-to-host	Forward IPv6 with source address as multicast to FortiOS.		
ipv6-daddr-err	Destination address as unspecified or loopback address anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with destination address as unspecified or loopback address to pass.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop</i></td><td>Drop IPv6 with destination address as unspecified or loopback address.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 with destination address as unspecified or loopback address to FortiOS.</td></tr></table>	Option	Description	<i>drop</i>	Drop IPv6 with destination address as unspecified or loopback address.	<i>trap-to-host</i>	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.					
	Option	Description										
	<i>drop</i>	Drop IPv6 with destination address as unspecified or loopback address.										
<i>trap-to-host</i>	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 with home address option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv6 with home address option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 with home address option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 with home address option to pass.	<i>drop</i>	Drop IPv6 with home address option.	<i>trap-to-host</i>	Forward IPv6 with home address option to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv6 with home address option to pass.										
	<i>drop</i>	Drop IPv6 with home address option.										
<i>trap-to-host</i>	Forward IPv6 with home address option to FortiOS.											
ipv6-optnsap	Network service access point address option anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	Option	Description		
	allow	Allow IPv6 with network service access point address option to pass.		
	drop	Drop IPv6 with network service access point address option.		
	trap-to-host	Forward IPv6 with network service access point address option to FortiOS.		
ipv6-optendpid	End point identification anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with end point identification option to pass.		
	drop	Drop IPv6 with end point identification option.		
	trap-to-host	Forward IPv6 with end point identification option to FortiOS.		
ipv6-optinvld	Invalid option anomalies.Invalid option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with invalid option to pass.		
	drop	Drop IPv6 with invalid option.		
	trap-to-host	Forward IPv6 with invalid option to FortiOS.		

## config hpe

Parameter	Description	Type	Size	Default
tcpsyn-max	Maximum TCP SYN packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	600000
tcpsyn-ack-max	Maximum TCP carries SYN and ACK flags packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	600000
tcpfin-rst-max	Maximum TCP carries FIN or RST flags packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	600000

Parameter	Description	Type	Size	Default
tcp-max	Maximum TCP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	600000
udp-max	Maximum UDP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	600000
icmp-max	Maximum ICMP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
sctp-max	Maximum SCTP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
esp-max	Maximum ESP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
ip-frag-max	Maximum fragmented IP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
ip-others-max	Maximum IP packet rate for other packets.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
arp-max	Maximum ARP packet rate.	integer	Minimum value: 1000 Maximum value: 1000000000	200000

Parameter	Description	Type	Size	Default
l2-others-max	Maximum L2 packet rate for L2 packets that are not ARP packets.	integer	Minimum value: 1000 Maximum value: 10000000000	200000
pri-type-max	Maximum overflow rate of priority type traffic. Includes L2: HA, 802.3ad LACP, heartbeats. L3: OSPF. L4_TCP: BGP. L4_UDP: IKE, SLBC, BFD.	integer	Minimum value: 1000 Maximum value: 10000000000	200000
enable-shaper	Enable/Disable NPU Host Protection Engine(HPE) for packet type shaper.	option	-	disable

Option	Description
<i>disable</i>	Disable NPU HPE shaping based on packet type.
<i>enable</i>	Enable NPU HPE shaping based on packet type.

	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP land attack to pass.</td></tr><tr><td>drop</td><td>Drop TCP land attack.</td></tr><tr><td>trap-to-host</td><td>Forward TCP land attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP land attack to pass.	drop	Drop TCP land attack.	trap-to-host	Forward TCP land attack to FortiOS.			
	Option	Description										
	allow	Allow TCP land attack to pass.										
	drop	Drop TCP land attack.										
trap-to-host	Forward TCP land attack to FortiOS.											
udp-land	UDP land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow UDP land attack to pass.</td></tr><tr><td>drop</td><td>Drop UDP land attack.</td></tr><tr><td>trap-to-host</td><td>Forward UDP land attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow UDP land attack to pass.	drop	Drop UDP land attack.	trap-to-host	Forward UDP land attack to FortiOS.			
	Option	Description										
	allow	Allow UDP land attack to pass.										
	drop	Drop UDP land attack.										
trap-to-host	Forward UDP land attack to FortiOS.											
icmp-land	ICMP land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow ICMP land attack to pass.</td></tr><tr><td>drop</td><td>Drop ICMP land attack.</td></tr><tr><td>trap-to-host</td><td>Forward ICMP land attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow ICMP land attack to pass.	drop	Drop ICMP land attack.	trap-to-host	Forward ICMP land attack to FortiOS.			
	Option	Description										
	allow	Allow ICMP land attack to pass.										
	drop	Drop ICMP land attack.										
trap-to-host	Forward ICMP land attack to FortiOS.											
icmp-frag	Layer 3 fragmented packets that could be part of layer 4 ICMP anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow L3 fragment packet with L4 protocol as ICMP attack to pass.</td></tr><tr><td>drop</td><td>Drop L3 fragment packet with L4 protocol as ICMP attack.</td></tr><tr><td>trap-to-host</td><td>Forward L3 fragment packet with L4 protocol as ICMP attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow L3 fragment packet with L4 protocol as ICMP attack to pass.	drop	Drop L3 fragment packet with L4 protocol as ICMP attack.	trap-to-host	Forward L3 fragment packet with L4 protocol as ICMP attack to FortiOS.			
	Option	Description										
	allow	Allow L3 fragment packet with L4 protocol as ICMP attack to pass.										
	drop	Drop L3 fragment packet with L4 protocol as ICMP attack.										
trap-to-host	Forward L3 fragment packet with L4 protocol as ICMP attack to FortiOS.											
ipv4-land	Land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 land attack to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 land attack.</td></tr></table>	Option	Description	allow	Allow IPv4 land attack to pass.	drop	Drop IPv4 land attack.					
	Option	Description										
	allow	Allow IPv4 land attack to pass.										
drop	Drop IPv4 land attack.											

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>trap-to-host</td><td>Forward IPv4 land attack to FortiOS.</td></tr></table>	Option	Description	trap-to-host	Forward IPv4 land attack to FortiOS.							
	Option	Description										
trap-to-host	Forward IPv4 land attack to FortiOS.											
ipv4-proto-err	Invalid layer 4 protocol anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 invalid L4 protocol to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 invalid L4 protocol.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 invalid L4 protocol to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 invalid L4 protocol to pass.	drop	Drop IPv4 invalid L4 protocol.	trap-to-host	Forward IPv4 invalid L4 protocol to FortiOS.			
	Option	Description										
	allow	Allow IPv4 invalid L4 protocol to pass.										
	drop	Drop IPv4 invalid L4 protocol.										
trap-to-host	Forward IPv4 invalid L4 protocol to FortiOS.											
ipv4-unknopt	Unknown option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with unknown options to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with unknown options.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with unknown options to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with unknown options to pass.	drop	Drop IPv4 with unknown options.	trap-to-host	Forward IPv4 with unknown options to FortiOS.			
	Option	Description										
	allow	Allow IPv4 with unknown options to pass.										
	drop	Drop IPv4 with unknown options.										
trap-to-host	Forward IPv4 with unknown options to FortiOS.											
ipv4-optrr	Record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with record route option to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with record route option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with record route option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with record route option to pass.	drop	Drop IPv4 with record route option.	trap-to-host	Forward IPv4 with record route option to FortiOS.			
	Option	Description										
	allow	Allow IPv4 with record route option to pass.										
	drop	Drop IPv4 with record route option.										
trap-to-host	Forward IPv4 with record route option to FortiOS.											
ipv4-optssrr	Strict source record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with strict source record route option to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with strict source record route option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with strict source record route option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with strict source record route option to pass.	drop	Drop IPv4 with strict source record route option.	trap-to-host	Forward IPv4 with strict source record route option to FortiOS.			
	Option	Description										
	allow	Allow IPv4 with strict source record route option to pass.										
	drop	Drop IPv4 with strict source record route option.										
trap-to-host	Forward IPv4 with strict source record route option to FortiOS.											
ipv4-optlsrr	Loose source record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with loose source record route option to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with loose source record route option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with loose source record route option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with loose source record route option to pass.	drop	Drop IPv4 with loose source record route option.	trap-to-host	Forward IPv4 with loose source record route option to FortiOS.			
	Option	Description										
	allow	Allow IPv4 with loose source record route option to pass.										
	drop	Drop IPv4 with loose source record route option.										
trap-to-host	Forward IPv4 with loose source record route option to FortiOS.											
ipv4-optstream	Stream option anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with stream option to pass.		
	<i>drop</i>	Drop IPv4 with stream option.		
	<i>trap-to-host</i>	Forward IPv4 with stream option to FortiOS.		
ipv4-optsecurity	Security option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with security option to pass.		
	<i>drop</i>	Drop IPv4 with security option.		
	<i>trap-to-host</i>	Forward IPv4 with security option to FortiOS.		
ipv4-opttimestamp	Timestamp option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with timestamp option to pass.		
	<i>drop</i>	Drop IPv4 with timestamp option.		
	<i>trap-to-host</i>	Forward IPv4 with timestamp option to FortiOS.		
ipv4-csum-err	Invalid IPv4 IP checksum anomalies.	option	-	drop
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv4 invalid IP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid IP checksum to main CPU for processing.		
tcp-csum-err	Invalid IPv4 TCP checksum anomalies.	option	-	drop
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv4 invalid TCP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid TCP checksum to main CPU for processing.		
udp-csum-err	Invalid IPv4 UDP checksum anomalies.	option	-	drop
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv4 invalid UDP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid UDP checksum to main CPU for processing.		
icmp-csum-err	Invalid IPv4 ICMP checksum anomalies.	option	-	drop

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop</i></td><td>Drop IPv4 invalid ICMP checksum.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 invalid ICMP checksum to main CPU for processing.</td></tr></table>	Option	Description	<i>drop</i>	Drop IPv4 invalid ICMP checksum.	<i>trap-to-host</i>	Forward IPv4 invalid ICMP checksum to main CPU for processing.					
	Option	Description										
	<i>drop</i>	Drop IPv4 invalid ICMP checksum.										
<i>trap-to-host</i>	Forward IPv4 invalid ICMP checksum to main CPU for processing.											
ipv6-land	Land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 land attack to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv6 land attack.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 land attack to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 land attack to pass.	<i>drop</i>	Drop IPv6 land attack.	<i>trap-to-host</i>	Forward IPv6 land attack to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv6 land attack to pass.										
	<i>drop</i>	Drop IPv6 land attack.										
<i>trap-to-host</i>	Forward IPv6 land attack to FortiOS.											
ipv6-proto-err	Layer 4 invalid protocol anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 L4 invalid protocol to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv6 L4 invalid protocol.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 L4 invalid protocol to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 L4 invalid protocol to pass.	<i>drop</i>	Drop IPv6 L4 invalid protocol.	<i>trap-to-host</i>	Forward IPv6 L4 invalid protocol to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv6 L4 invalid protocol to pass.										
	<i>drop</i>	Drop IPv6 L4 invalid protocol.										
<i>trap-to-host</i>	Forward IPv6 L4 invalid protocol to FortiOS.											
ipv6-unknpt	Unknown option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 with unknown options to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv6 with unknown options.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 with unknown options to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 with unknown options to pass.	<i>drop</i>	Drop IPv6 with unknown options.	<i>trap-to-host</i>	Forward IPv6 with unknown options to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv6 with unknown options to pass.										
	<i>drop</i>	Drop IPv6 with unknown options.										
<i>trap-to-host</i>	Forward IPv6 with unknown options to FortiOS.											
ipv6-saddr-err	Source address as multicast anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 with source address as multicast to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv6 with source address as multicast.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 with source address as multicast to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 with source address as multicast to pass.	<i>drop</i>	Drop IPv6 with source address as multicast.	<i>trap-to-host</i>	Forward IPv6 with source address as multicast to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv6 with source address as multicast to pass.										
	<i>drop</i>	Drop IPv6 with source address as multicast.										
<i>trap-to-host</i>	Forward IPv6 with source address as multicast to FortiOS.											
ipv6-daddr-err	Destination address as unspecified or loopback address anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 with destination address as unspecified or loopback address to pass.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 with destination address as unspecified or loopback address to pass.							
	Option	Description										
<i>allow</i>	Allow IPv6 with destination address as unspecified or loopback address to pass.											

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>drop</i>	Drop IPv6 with destination address as unspecified or loopback address.		
	<i>trap-to-host</i>	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.		
ipv6-optralert	Router alert option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with router alert option to pass.		
	<i>drop</i>	Drop IPv6 with router alert option.		
	<i>trap-to-host</i>	Forward IPv6 with router alert option to FortiOS.		
ipv6-optjumbo	Jumbo options anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with jumbo option to pass.		
	<i>drop</i>	Drop IPv6 with jumbo option.		
	<i>trap-to-host</i>	Forward IPv6 with jumbo option to FortiOS.		
ipv6-opttunnel	Tunnel encapsulation limit option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with tunnel encapsulation limit to pass.		
	<i>drop</i>	Drop IPv6 with tunnel encapsulation limit.		
	<i>trap-to-host</i>	Forward IPv6 with tunnel encapsulation limit to FortiOS.		
ipv6-opthomeaddr	Home address option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with home address option to pass.		
	<i>drop</i>	Drop IPv6 with home address option.		
	<i>trap-to-host</i>	Forward IPv6 with home address option to FortiOS.		
ipv6-optnsap	Network service access point address option anomalies.	option	-	trap-to-host

Parameter	Description	Type	Size	Default
	Option	Description		
	allow	Allow IPv6 with network service access point address option to pass.		
	drop	Drop IPv6 with network service access point address option.		
	trap-to-host	Forward IPv6 with network service access point address option to FortiOS.		
ipv6-optendpid	End point identification anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with end point identification option to pass.		
	drop	Drop IPv6 with end point identification option.		
	trap-to-host	Forward IPv6 with end point identification option to FortiOS.		
ipv6-optinvld	Invalid option anomalies.Invalid option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 with invalid option to pass.		
	drop	Drop IPv6 with invalid option.		
	trap-to-host	Forward IPv6 with invalid option to FortiOS.		

## config hpe

Parameter	Description	Type	Size	Default
tcpsyn-max	Maximum TCP SYN packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	5000000
tcp-max	Maximum TCP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	5000000
udp-max	Maximum UDP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	5000000

Parameter	Description	Type	Size	Default						
icmp-max	Maximum ICMP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
sctp-max	Maximum SCTP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
esp-max	Maximum ESP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
ip-frag-max	Maximum fragmented IP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
ip-others-max	Maximum IP packet rate for other packets.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
arp-max	Maximum ARP packet rate.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
l2-others-max	Maximum L2 packet rate for L2 packets that are not ARP packets.	integer	Minimum value: 10000 Maximum value: 4000000000	1000000						
enable-shaper	Enable/Disable NPU host protection engine (HPE) shaper.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable NPU HPE shaping based on packet type.</td></tr><tr><td>enable</td><td>Enable NPU HPE shaping based on packet type.</td></tr></table>				Option	Description	disable	Disable NPU HPE shaping based on packet type.	enable	Enable NPU HPE shaping based on packet type.
Option	Description									
disable	Disable NPU HPE shaping based on packet type.									
enable	Enable NPU HPE shaping based on packet type.									

## config system npu-setting prp

This command is available for model(s): FortiGate 100F, FortiGate 101F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 60F, FortiWiFi 61F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 101E, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 61E, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGate VM64, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 61E, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure NPU PRP attributes.

```
config system npu-setting prp
    Description: Configure NPU PRP attributes.
    set prp-port-in <interface-name1>, <interface-name2>, ...
    set prp-port-out <interface-name1>, <interface-name2>, ...
end
```

## config system npu-setting prp

Parameter	Description	Type	Size	Default
prp-port-in <interface-name>	Ingress port configured to allow the PRP trailer not be stripped off when the PRP packets come in. All of the traffic originating from these ports will always be sent to the host. Physical interface name.	string	Maximum length: 35	
prp-port-out <interface-name>	Egress port configured to allow the PRP trailer not be stripped off when the PRP packets go out. Physical interface name.	string	Maximum length: 35	

## config system npu-vlink

## config system npu

Parameter	Description	Type	Size	Default								
capwap-offload *	Enable/disable offloading managed FortiAP and FortiLink CAPWAP sessions.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable CAPWAP offload.</td></tr><tr><td>disable</td><td>Disable CAPWAP offload.</td></tr></table>	Option	Description	enable	Enable CAPWAP offload.	disable	Disable CAPWAP offload.					
Option	Description											
enable	Enable CAPWAP offload.											
disable	Disable CAPWAP offload.											
dedicated-management-affinity *	Affinity setting for management daemons (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxx).	string	Maximum length: 79	1								
dedicated-management-cpu *	Enable to dedicate one CPU for GUI and CLI connections when NPs are busy.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable dedication of CPU #0 for management tasks.</td></tr><tr><td>disable</td><td>Disable dedication of CPU #0 for management tasks.</td></tr></table>	Option	Description	enable	Enable dedication of CPU #0 for management tasks.	disable	Disable dedication of CPU #0 for management tasks.					
Option	Description											
enable	Enable dedication of CPU #0 for management tasks.											
disable	Disable dedication of CPU #0 for management tasks.											
default-qos-type *	Set default QoS type.	option	-	shaping								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>policing</td><td>QoS type policing.</td></tr><tr><td>shaping</td><td>QoS type shaping.</td></tr><tr><td>policing-enhanced</td><td>Enhanced QoS type policing.</td></tr></table>	Option	Description	policing	QoS type policing.	shaping	QoS type shaping.	policing-enhanced	Enhanced QoS type policing.			
Option	Description											
policing	QoS type policing.											
shaping	QoS type shaping.											
policing-enhanced	Enhanced QoS type policing.											
double-level-mcast-offload *	Enable double level mcast offload.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable double level mcast offload.</td></tr><tr><td>disable</td><td>Disable double level mcast offload.</td></tr></table>	Option	Description	enable	Enable double level mcast offload.	disable	Disable double level mcast offload.					
Option	Description											
enable	Enable double level mcast offload.											
disable	Disable double level mcast offload.											
fastpath *	Enable/disable NP6 offloading (also called fast path).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable NP6 offloading (fast path).</td></tr><tr><td>enable</td><td>Enable NP6 offloading (fast path).</td></tr></table>	Option	Description	disable	Disable NP6 offloading (fast path).	enable	Enable NP6 offloading (fast path).					
Option	Description											
disable	Disable NP6 offloading (fast path).											
enable	Enable NP6 offloading (fast path).											

Parameter	Description	Type	Size	Default								
gtp-enhanced-cpu-range *	GTP enhanced CPU range option.	option	-	0								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>0</td><td>Inspect GTPU packets by all CPUs.</td></tr><tr><td>1</td><td>Inspect GTPU packets by Master CPUs.</td></tr><tr><td>2</td><td>Inspect GTPU packets by Slave CPUs.</td></tr></table>	Option	Description	0	Inspect GTPU packets by all CPUs.	1	Inspect GTPU packets by Master CPUs.	2	Inspect GTPU packets by Slave CPUs.			
Option	Description											
0	Inspect GTPU packets by all CPUs.											
1	Inspect GTPU packets by Master CPUs.											
2	Inspect GTPU packets by Slave CPUs.											
gtp-enhanced-mode *	Enable/disable GTP enhanced mode.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable GTP enhanced mode.</td></tr><tr><td>disable</td><td>Disable GTP enhanced mode.</td></tr></table>	Option	Description	enable	Enable GTP enhanced mode.	disable	Disable GTP enhanced mode.					
Option	Description											
enable	Enable GTP enhanced mode.											
disable	Disable GTP enhanced mode.											
gtp-support *	Enable/Disable NP7 GTP support	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable NP7 GTP support</td></tr><tr><td>disable</td><td>Disable NP7 GTP support</td></tr></table>	Option	Description	enable	Enable NP7 GTP support	disable	Disable NP7 GTP support					
Option	Description											
enable	Enable NP7 GTP support											
disable	Disable NP7 GTP support											
hash-tbl-spread *	Enable/disable hash table entry spread.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable hash table entry spread.</td></tr><tr><td>disable</td><td>Disable hash table entry spread.</td></tr></table>	Option	Description	enable	Enable hash table entry spread.	disable	Disable hash table entry spread.					
Option	Description											
enable	Enable hash table entry spread.											
disable	Disable hash table entry spread.											
host-shortcut-mode *	Set NP6 host shortcut mode.	option	-	bi-directional								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>bi-directional</td><td>Offload TCP and IP Tunnel sessions in both directions between 10G and 1G interfaces (normal operation).</td></tr><tr><td>host-shortcut</td><td>Only offload TCP and IP Tunnel sessions received by 1G interfaces. Select if packets are dropped for offloaded traffic between 10G to 1G interfaces.</td></tr></table>	Option	Description	bi-directional	Offload TCP and IP Tunnel sessions in both directions between 10G and 1G interfaces (normal operation).	host-shortcut	Only offload TCP and IP Tunnel sessions received by 1G interfaces. Select if packets are dropped for offloaded traffic between 10G to 1G interfaces.					
Option	Description											
bi-directional	Offload TCP and IP Tunnel sessions in both directions between 10G and 1G interfaces (normal operation).											
host-shortcut	Only offload TCP and IP Tunnel sessions received by 1G interfaces. Select if packets are dropped for offloaded traffic between 10G to 1G interfaces.											
htab-dedi-queue-nr *	Set the number of dedicate queue for hash table messages.	integer	Minimum value: 1 Maximum value: 2	1								

Parameter	Description	Type	Size	Default																														
htab-msg-queue *	Set hash table message queue mode.	option	-	data																														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>data</i></td><td>Use data queue.</td></tr><tr><td><i>idle</i></td><td>Use idle queue.</td></tr><tr><td><i>dedicated</i></td><td>Use dedicated queue.</td></tr></table>	Option	Description	<i>data</i>	Use data queue.	<i>idle</i>	Use idle queue.	<i>dedicated</i>	Use dedicated queue.																									
Option	Description																																	
<i>data</i>	Use data queue.																																	
<i>idle</i>	Use idle queue.																																	
<i>dedicated</i>	Use dedicated queue.

htx-icmp-csum-chk *	Set HTX icmp csum checking mode.	option	-	drop																														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop</i></td><td>Drop bad icmp csum.</td></tr><tr><td><i>pass</i></td><td>Pass bad icmp csum.</td></tr></table>	Option	Description	<i>drop</i>	Drop bad icmp csum.	<i>pass</i>	Pass bad icmp csum.																											
Option	Description																																	
<i>drop</i>	Drop bad icmp csum.																																	
<i>pass</i>	Pass bad icmp csum.																																	
inbound-dscp-copy-port <interface> *	Physical interfaces that support inbound-dscp-copy. Physical interface name.	string	Maximum length: 15																															

Parameter	Description	Type	Size	Default						
intf-shaping-offload *	Enable/disable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.</td></tr><tr><td><i>disable</i></td><td>Disable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.	<i>disable</i>	Disable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.			
Option	Description									
<i>enable</i>	Enable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.									
<i>disable</i>	Disable NPU offload when doing interface-based traffic shaping according to the egress-shaping-profile.									
iph-rsvd-recksum *	Enable/disable IP checksum re-calculation for packets with iph.reserved bit set.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IP checksum re-calculation for packets with iph.reserved bit set.</td></tr><tr><td><i>disable</i></td><td>Disable IP checksum re-calculation for packets with iph.reserved bit set.</td></tr></table>	Option	Description	<i>enable</i>	Enable IP checksum re-calculation for packets with iph.reserved bit set.	<i>disable</i>	Disable IP checksum re-calculation for packets with iph.reserved bit set.			
Option	Description									
<i>enable</i>	Enable IP checksum re-calculation for packets with iph.reserved bit set.									
<i>disable</i>	Disable IP checksum re-calculation for packets with iph.reserved bit set.									
ipsec-dec-subengine-mask *	IPsec decryption subengine mask.	user	Not Specified							
ipsec-enc-subengine-mask *	IPsec encryption subengine mask.	user	Not Specified							
ipsec-inbound-cache *	Enable/disable IPsec inbound cache for anti-replay.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable inbound cache always.</td></tr><tr><td><i>disable</i></td><td>Disable inbound cache when IPsec anti-replay is on.</td></tr></table>	Option	Description	<i>enable</i>	Enable inbound cache always.	<i>disable</i>	Disable inbound cache when IPsec anti-replay is on.			
Option	Description									
<i>enable</i>	Enable inbound cache always.									
<i>disable</i>	Disable inbound cache when IPsec anti-replay is on.									
ipsec-mtu-override *	Enable/disable NP6 IPsec MTU override.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable NP6 IPsec MTU override.</td></tr><tr><td><i>enable</i></td><td>Enable NP6 IPsec MTU override.</td></tr></table>	Option	Description	<i>disable</i>	Disable NP6 IPsec MTU override.	<i>enable</i>	Enable NP6 IPsec MTU override.			
Option	Description									
<i>disable</i>	Disable NP6 IPsec MTU override.									
<i>enable</i>	Enable NP6 IPsec MTU override.									
ipsec-ob-np-sel *	IPsec NP selection for OB SA offloading.	option	-	rr						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rr</i></td><td>Round Robin.</td></tr></table>	Option	Description	<i>rr</i>	Round Robin.					
Option	Description									
<i>rr</i>	Round Robin.									

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>Packet</i>	NPU of the first packet.		
	<i>Hash</i>	Hash.		
ipsec-over-vlink *	Enable/disable IPsec over vlink.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IPSEC over vlink.		
	<i>disable</i>	Disable IPSEC over vlink.		
lag-out-port-select *	Enable/disable LAG outgoing port selection based on incoming traffic port.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable LAG outgoing trunk in switch.		
	<i>enable</i>	Enable LAG outgoing trunk in switch.		
max-session-timeout *	Maximum time interval for refreshing NPU-offloaded sessions.	integer	Minimum value: 10 Maximum value: 1000	40
mcast-session-accounting *	Enable/disable traffic accounting for each multicast session through TAE counter.	option	-	tpe-based
	<b>Option</b>	<b>Description</b>		
	<i>tpe-based</i>	Enable TPE-based multicast session accounting.		
	<i>session-based</i>	Enable session-based multicast session accounting.		
	<i>disable</i>	Disable multicast session accounting.		
napi-break-interval *	NAPI break interval.	integer	Minimum value: 0 Maximum value: 65535	0
np6-cps-optimization-mode *	Enable/disable NP6 connection per second (CPS) optimization mode.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NP6 connection per second (CPS) optimization mode.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable NP6 connection per second (CPS) optimization mode.</td></tr></table>	Option	Description	<i>disable</i>	Disable NP6 connection per second (CPS) optimization mode.							
	Option	Description										
<i>disable</i>	Disable NP6 connection per second (CPS) optimization mode.											
npu-group-effective-scope *	npu-group-effective-scope defines under which npu-group cmds such as list/purge will be executed. Default scope is for all four HS-ok groups..	integer	Minimum value: 0 Maximum value: 255	255								
per-policy-accounting *	Set per-policy accounting.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable per-policy hit count.</td></tr><tr><td><i>enable</i></td><td>Enable per-policy hit count</td></tr></table>	Option	Description	<i>disable</i>	Disable per-policy hit count.	<i>enable</i>	Enable per-policy hit count					
	Option	Description										
	<i>disable</i>	Disable per-policy hit count.										
<i>enable</i>	Enable per-policy hit count											
per-session-accounting *	Set per-session accounting.	option	-	traffic-log-only								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>traffic-log-only</i></td><td>Per-session accounting only for sessions with traffic logging</td></tr><tr><td><i>disable</i></td><td>Disable per-session accounting.</td></tr><tr><td><i>enable</i></td><td>Per-session accounting for all sessions.</td></tr></table>	Option	Description	<i>traffic-log-only</i>	Per-session accounting only for sessions with traffic logging	<i>disable</i>	Disable per-session accounting.	<i>enable</i>	Per-session accounting for all sessions.			
	Option	Description										
	<i>traffic-log-only</i>	Per-session accounting only for sessions with traffic logging										
	<i>disable</i>	Disable per-session accounting.										
<i>enable</i>	Per-session accounting for all sessions.											
policy-offload-level *	Configure firewall policy offload level.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable policy offloading</td></tr><tr><td><i>dos-offload</i></td><td>Only enable DoS policy offloading</td></tr></table>	Option	Description	<i>disable</i>	Disable policy offloading	<i>dos-offload</i>	Only enable DoS policy offloading					
	Option	Description										
	<i>disable</i>	Disable policy offloading										
<i>dos-offload</i>	Only enable DoS policy offloading											
qos-mode *	QoS mode on switch and NP.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable QoS on switch and NP.</td></tr><tr><td><i>priority</i></td><td>Priority based.</td></tr><tr><td><i>round-robin</i></td><td>Round Robin Scheduler.</td></tr></table>	Option	Description	<i>disable</i>	Disable QoS on switch and NP.	<i>priority</i>	Priority based.	<i>round-robin</i>	Round Robin Scheduler.			
	Option	Description										
	<i>disable</i>	Disable QoS on switch and NP.										
	<i>priority</i>	Priority based.										
<i>round-robin</i>	Round Robin Scheduler.											
qtm-buf-mode *	QTM channel configuration for packet buffer.	option	-	6ch								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>6ch</i>	6 DRAM channels for packet buffer.		
	<i>4ch</i>	4 DRAM channels for packet buffer.		
rdp-offload *	Enable/disable RDP offload.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable reliable datagram protocol traffic offload.		
	<i>disable</i>	Disable reliable datagram protocol traffic offload.		
recover-np6-link *	Enable/disable internal link failure check and recovery after boot up.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable internal link failure check and recovery after boot up.		
	<i>disable</i>	Disable internal link failure check and recovery after boot up.		
session-acct-interval *	Session accounting update interval.	integer	Minimum value: 1 Maximum value: 10	5
session-denied-offload *	Enable/disable offloading of denied sessions. Requires ses-denied-traffic to be set.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable offloading of denied sessions.		
	<i>enable</i>	Enable offloading of denied sessions.		
shaping-stats *	Enable/disable NP7 traffic shaping statistics.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable NP7 traffic shaping statistics.		
	<i>enable</i>	Enable NP7 traffic shaping statistics.		
sse-backpressure *	Enable/disable SSE backpressure.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable SSE backpressure.		
	<i>disable</i>	Disable SSE backpressure.		

Parameter	Description	Type	Size	Default																		
strip-clear-text-padding *	Enable/disable stripping clear text padding.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable stripping clear text padding.</td></tr><tr><td><i>disable</i></td><td>Disable stripping clear text padding.</td></tr></table>	Option	Description	<i>enable</i>	Enable stripping clear text padding.	<i>disable</i>	Disable stripping clear text padding.															
Option	Description																					
<i>enable</i>	Enable stripping clear text padding.																					
<i>disable</i>	Disable stripping clear text padding.																					
strip-esp-padding *	Enable/disable stripping ESP padding.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable stripping ESP padding.</td></tr><tr><td><i>disable</i></td><td>Disable stripping ESP padding.</td></tr></table>	Option	Description	<i>enable</i>	Enable stripping ESP padding.	<i>disable</i>	Disable stripping ESP padding.															
Option	Description																					
<i>enable</i>	Enable stripping ESP padding.																					
<i>disable</i>	Disable stripping ESP padding.																					
sw-np-bandwidth *	Bandwidth from switch to NP.	option	-	0G																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>0G</i></td><td>Default value. No bandwidth control.</td></tr><tr><td><i>2G</i></td><td>2Gbps.</td></tr><tr><td><i>4G</i></td><td>4Gbps.</td></tr><tr><td><i>5G</i></td><td>5Gbps.</td></tr><tr><td><i>6G</i></td><td>6Gbps.</td></tr><tr><td><i>7G</i></td><td>7Gbps.</td></tr><tr><td><i>8G</i></td><td>8Gbps.</td></tr><tr><td><i>9G</i></td><td>9Gbps.</td></tr></table>	Option	Description	<i>0G</i>	Default value. No bandwidth control.	<i>2G</i>	2Gbps.	<i>4G</i>	4Gbps.	<i>5G</i>	5Gbps.	<i>6G</i>	6Gbps.	<i>7G</i>	7Gbps.	<i>8G</i>	8Gbps.	<i>9G</i>	9Gbps.			
Option	Description																					
<i>0G</i>	Default value. No bandwidth control.																					
<i>2G</i>	2Gbps.																					
<i>4G</i>	4Gbps.																					
<i>5G</i>	5Gbps.																					
<i>6G</i>	6Gbps.																					
<i>7G</i>	7Gbps.																					
<i>8G</i>	8Gbps.																					
<i>9G</i>	9Gbps.																					
switch-np-hash *	Switch-NP trunk port selection Criteria.	option	-	src-dst-ip																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>src-ip</i></td><td>Source IP address.</td></tr><tr><td><i>dst-ip</i></td><td>Destination IP address.</td></tr><tr><td><i>src-dst-ip</i></td><td>Source+dest IP address.</td></tr></table>	Option	Description	<i>src-ip</i>	Source IP address.	<i>dst-ip</i>	Destination IP address.	<i>src-dst-ip</i>	Source+dest IP address.													
Option	Description																					
<i>src-ip</i>	Source IP address.																					
<i>dst-ip</i>	Destination IP address.																					
<i>src-dst-ip</i>	Source+dest IP address.																					
uesp-offload *	Enable/disable UDP-encapsulated ESP offload.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable UDP-encapsulated ESP traffic offload.</td></tr></table>	Option	Description	<i>enable</i>	Enable UDP-encapsulated ESP traffic offload.																	
Option	Description																					
<i>enable</i>	Enable UDP-encapsulated ESP traffic offload.																					

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable UDP-encapsulated ESP traffic offload.		
ull-port-mode *	Set ULL port's speed to 10G/25G.	option	-	10G
	<b>Option</b>	<b>Description</b>		
	<i>10G</i>	10G speed setting for ULL ports.		
	<i>25G</i>	25G speed setting for ULL ports.		
vlan-lookup-cache *	Enable/disable vlan lookup cache.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable VLAN lookup cache.		
	<i>disable</i>	Disable VLAN lookup cache.		

\* This parameter may not exist in some models.

### config dos-options

Parameter	Description	Type	Size	Default
npu-dos-meter-mode	Set DoS meter NPU offloading mode.	option	-	global
	<b>Option</b>	<b>Description</b>		
	<i>global</i>	Install DoS meter to all NPs.		
	<i>local</i>	Install DoS meter only to the NP assigned to the traffic.		
npu-dos-tpe-mode	Enable/disable insertion of DoS meter ID to session table.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable insertion of DoS meter ID to session table.		
	<i>disable</i>	Disable insertion of DoS meter ID to session table.		

## config dsw-dts-profile

Parameter	Description	Type	Size	Default
profile-id	Set NPU DSW DTS profile profile id.	integer	Minimum value: 1 Maximum value: 32	0
min-limit	Set NPU DSW DTS profile min-limit.	integer	Minimum value: 32 Maximum value: 2048	0
step	Set NPU DSW DTS profile step.	integer	Minimum value: 0 Maximum value: 64	0
action	Set NPU DSW DTS profile action.	option	-	wait
	Option	Description		
	wait	DSW DTS profile WAIT indefinitely.		
	drop	DSW DTS profile DROP immediately.		
	drop_tmr_0	DSW DTS profile DROP after interval #0 time-out.		
	drop_tmr_1	DSW DTS profile DROP after interval #1 time-out.		
	enqueue	DSW DTS profile ENQUEUE immediately.		
	enqueue_0	DSW DTS profile ENQUEUE after interval #0 time-out.		
	enqueue_1	DSW DTS profile ENQUEUE after interval #1 time-out.		

## config dsw-queue-dts-profile

Parameter	Description	Type	Size	Default

	allow	Allow UDP land attack to pass.										
	drop	Drop UDP land attack.										
trap-to-host	Forward UDP land attack to FortiOS.											
icmp-land *	ICMP land anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow ICMP land attack to pass.		
	<i>drop</i>	Drop ICMP land attack.		
	<i>trap-to-host</i>	Forward ICMP land attack to FortiOS.		
icmp-frag *	Layer 3 fragmented packets that could be part of layer 4 ICMP anomalies.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow L3 fragment packet with L4 protocol as ICMP attack to pass.		
	<i>drop</i>	Drop L3 fragment packet with L4 protocol as ICMP attack.		
	<i>trap-to-host</i>	Forward L3 fragment packet with L4 protocol as ICMP attack to FortiOS.		
ipv4-land *	Land anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 land attack to pass.		
	<i>drop</i>	Drop IPv4 land attack.		
	<i>trap-to-host</i>	Forward IPv4 land attack to FortiOS.		
ipv4-proto-err *	Invalid layer 4 protocol anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 invalid L4 protocol to pass.		
	<i>drop</i>	Drop IPv4 invalid L4 protocol.		
	<i>trap-to-host</i>	Forward IPv4 invalid L4 protocol to FortiOS.		
ipv4-unknpt *	Unknown option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with unknown options to pass.		
	<i>drop</i>	Drop IPv4 with unknown options.		
	<i>trap-to-host</i>	Forward IPv4 with unknown options to FortiOS.		
ipv4-optrr *	Record route option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv4 with record route option to pass.		

Parameter	Description	Type	Size	Default
	Option	Description		
	drop	Drop IPv4 with record route option.		
	trap-to-host	Forward IPv4 with record route option to FortiOS.		
ipv4-optssrr *	Strict source record route option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv4 with strict source record route option to pass.		
	drop	Drop IPv4 with strict source record route option.		
	trap-to-host	Forward IPv4 with strict source record route option to FortiOS.		
ipv4-optlsrr *	Loose source record route option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv4 with loose source record route option to pass.		
	drop	Drop IPv4 with loose source record route option.		
	trap-to-host	Forward IPv4 with loose source record route option to FortiOS.		
ipv4-optstream *	Stream option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv4 with stream option to pass.		
	drop	Drop IPv4 with stream option.		
	trap-to-host	Forward IPv4 with stream option to FortiOS.		
ipv4-optsecurity *	Security option anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv4 with security option to pass.		
	drop	Drop IPv4 with security option.		
	trap-to-host	Forward IPv4 with security option to FortiOS.		
ipv4-opttimestamp *	Timestamp option anomalies.	option	-	trap-to-host

Parameter	Description	Type	Size	Default
	Option	Description		
	allow	Allow IPv4 with timestamp option to pass.		
	drop	Drop IPv4 with timestamp option.		
	trap-to-host	Forward IPv4 with timestamp option to FortiOS.		
ipv4-csum-err	Invalid IPv4 IP checksum anomalies.	option	-	drop
	Option	Description		
	drop	Drop IPv4 invalid IP checksum.		
	trap-to-host	Forward IPv4 invalid IP checksum to main CPU for processing.		
tcp-csum-err	Invalid IPv4 TCP checksum anomalies.	option	-	drop
	Option	Description		
	drop	Drop IPv4 invalid TCP checksum.		
	trap-to-host	Forward IPv4 invalid TCP checksum to main CPU for processing.		
udp-csum-err	Invalid IPv4 UDP checksum anomalies.	option	-	drop
	Option	Description		
	drop	Drop IPv4 invalid UDP checksum.		
	trap-to-host	Forward IPv4 invalid UDP checksum to main CPU for processing.		
icmp-csum-err	Invalid IPv4 ICMP checksum anomalies.	option	-	drop
	Option	Description		
	drop	Drop IPv4 invalid ICMP checksum.		
	trap-to-host	Forward IPv4 invalid ICMP checksum to main CPU for processing.		
ipv6-land *	Land anomalies.	option	-	trap-to-host
	Option	Description		
	allow	Allow IPv6 land attack to pass.		
	drop	Drop IPv6 land attack.		
	trap-to-host	Forward IPv6 land attack to FortiOS.		
ipv6-proto-err *	Layer 4 invalid protocol anomalies.	option	-	trap-to-host

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 L4 invalid protocol to pass.		
	<i>drop</i>	Drop IPv6 L4 invalid protocol.		
	<i>trap-to-host</i>	Forward IPv6 L4 invalid protocol to FortiOS.		
ipv6-unknopt *	Unknown option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with unknown options to pass.		
	<i>drop</i>	Drop IPv6 with unknown options.		
	<i>trap-to-host</i>	Forward IPv6 with unknown options to FortiOS.		
ipv6-saddr-err *	Source address as multicast anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with source address as multicast to pass.		
	<i>drop</i>	Drop IPv6 with source address as multicast.		
	<i>trap-to-host</i>	Forward IPv6 with source address as multicast to FortiOS.		
ipv6-daddr-err *	Destination address as unspecified or loopback address anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with destination address as unspecified or loopback address to pass.		
	<i>drop</i>	Drop IPv6 with destination address as unspecified or loopback address.		
	<i>trap-to-host</i>	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.		
ipv6-optralert *	Router alert option anomalies.	option	-	trap-to-host
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with router alert option to pass.		
	<i>drop</i>	Drop IPv6 with router alert option.		
	<i>trap-to-host</i>	Forward IPv6 with router alert option to FortiOS.		
ipv6-optjumbo *	Jumbo options anomalies.	option	-	trap-to-host

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>allow</i>	Allow IPv6 with jumbo option to pass.		
	<i>drop</i>	Drop IPv6 with jumbo option.		
	<i>trap-to-host</i>	Forward IPv6 with jumbo option to FortiOS.		
ipv6-opttunnel *	Tunnel encapsulation limit option anomalies.	option	-	trap-to-host
	<b>Option</b> <b>Description</b>			
	<i>allow</i>	Allow IPv6 with tunnel encapsulation limit to pass.		
	<i>drop</i>	Drop IPv6 with tunnel encapsulation limit.		
	<i>trap-to-host</i>	Forward IPv6 with tunnel encapsulation limit to FortiOS.		
ipv6-opthomeaddr *	Home address option anomalies.	option	-	trap-to-host
	<b>Option</b> <b>Description</b>			
	<i>allow</i>	Allow IPv6 with home address option to pass.		
	<i>drop</i>	Drop IPv6 with home address option.		
	<i>trap-to-host</i>	Forward IPv6 with home address option to FortiOS.		
ipv6-optnsap *	Network service access point address option anomalies.	option	-	trap-to-host
	<b>Option</b> <b>Description</b>			
	<i>allow</i>	Allow IPv6 with network service access point address option to pass.		
	<i>drop</i>	Drop IPv6 with network service access point address option.		
	<i>trap-to-host</i>	Forward IPv6 with network service access point address option to FortiOS.		
ipv6-optendpid *	End point identification anomalies.	option	-	trap-to-host
	<b>Option</b> <b>Description</b>			
	<i>allow</i>	Allow IPv6 with end point identification option to pass.		
	<i>drop</i>	Drop IPv6 with end point identification option.		
	<i>trap-to-host</i>	Forward IPv6 with end point identification option to FortiOS.		
ipv6-optinvld *	Invalid option anomalies.Invalid option anomalies.	option	-	trap-to-host

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow IPv6 with invalid option to pass.		
	<i>drop</i>	Drop IPv6 with invalid option.		
	<i>trap-to-host</i>	Forward IPv6 with invalid option to FortiOS.		

\* This parameter may not exist in some models.

## config hpe

Parameter	Description	Type	Size	Default
all-protocol	Maximum packet rate of each host queue except high priority traffic, set 0 to disable.	integer	Minimum value: 0 Maximum value: 32000000	400000
tcpsyn-max	Maximum TCP SYN packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	40000
tcpsyn-ack-max	Maximum TCP carries SYN and ACK flags packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	40000
tcpfin-rst-max	Maximum TCP carries FIN or RST flags packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	40000
tcp-max	Maximum TCP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	40000
udp-max	Maximum UDP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	40000

Parameter	Description	Type	Size	Default
icmp-max	Maximum ICMP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	5000
sctp-max	Maximum SCTP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	5000
esp-max	Maximum ESP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	5000
ip-frag-max	Maximum fragmented IP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	5000
ip-others-max	Maximum IP packet rate for other packets.	integer	Minimum value: 1000 Maximum value: 32000000	5000
arp-max	Maximum ARP packet rate.	integer	Minimum value: 1000 Maximum value: 32000000	5000
l2-others-max	Maximum L2 packet rate for L2 packets that are not ARP packets.	integer	Minimum value: 1000 Maximum value: 32000000	5000
high-priority	Maximum packet rate for high priority traffic packets.	integer	Minimum value: 1000 Maximum value: 32000000	400000
enable-shaper	Enable/Disable NPU Host Protection Engine (HPE) for packet type shaper.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable NPU HPE shaping based on packet type.		
	<i>enable</i>	Enable NPU HPE shaping based on packet type.		

### config ip-reassembly

Parameter	Description	Type	Size	Default
min-timeout	Minimum timeout value for IP reassembly (5 us - 600,000,000 us).	integer	Minimum value: 5 Maximum value: 600000000	64
max-timeout	Maximum timeout value for IP reassembly (5 us - 600,000,000 us).	integer	Minimum value: 5 Maximum value: 600000000	200000
status	Set IP reassembly processing status.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable IP reassembly.		
	<i>enable</i>	Enable IP reassembly.		

### config isf-np-queues

Parameter	Description	Type	Size	Default
cos0	CoS profile name for CoS 0.	string	Maximum length: 35	
cos1	CoS profile name for CoS 1.	string	Maximum length: 35	
cos2	CoS profile name for CoS 2.	string	Maximum length: 35	
cos3	CoS profile name for CoS 3.	string	Maximum length: 35	
cos4	CoS profile name for CoS 4.	string	Maximum length: 35	
cos5	CoS profile name for CoS 5.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
cos6	CoS profile name for CoS 6.	string	Maximum length: 35	
cos7	CoS profile name for CoS 7.	string	Maximum length: 35	

## config profile

Parameter	Description	Type	Size	Default

### config ethernet-type

Parameter	Description	Type	Size	Default
name	Ethernet Type Name.	string	Maximum length: 35	
type	Ethernet Type.	ether-type	Not Specified	0
queue	Queue Number.	integer	Minimum value: 0 Maximum value: 11	0
weight	Class Weight.	integer	Minimum value: 0 Maximum value: 15	15

### config ip-protocol

Parameter	Description	Type	Size	Default
name	IP Protocol Name.	string	Maximum length: 35	
protocol	IP Protocol.	integer	Minimum value: 0 Maximum value: 255	0

Parameter	Description	Type	Size	Default
queue	Queue Number.	integer	Minimum value: 0 Maximum value: 11	0
weight	Class Weight.	integer	Minimum value: 0 Maximum value: 15	14

### config ip-service

Parameter	Description	Type	Size	Default
name	IP service name.	string	Maximum length: 35	
protocol	IP protocol.	integer	Minimum value: 0 Maximum value: 255	0
sport	Source port.	integer	Minimum value: 0 Maximum value: 65535	0
dport	Destination port.	integer	Minimum value: 0 Maximum value: 65535	0
queue	Queue number.	integer	Minimum value: 0 Maximum value: 11	0
weight	Class weight.	integer	Minimum value: 0 Maximum value: 15	13

## config scheduler

Parameter	Description	Type	Size	Default
name	Scheduler name.	string	Maximum length: 35	
mode	Scheduler mode.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	Disable QoS on NP7.		
	<i>priority</i>	Priority Based.		
	<i>round-robin</i>	Round Robin Scheduler.		

## config port-cpu-map

Parameter	Description	Type	Size	Default
interface	The interface to map to a CPU core.	string	Maximum length: 15	
cpu-core	The CPU core to map to an interface.	string	Maximum length: 31	all

## config port-npu-map

Parameter	Description	Type	Size	Default
interface	Set NPU interface port for NPU group mapping.	string	Maximum length: 15	
npu-group-index	Mapping NPU group index.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config port-path-option

Parameter	Description	Type	Size	Default
ports-using-npu <interface-name>	Set ha/aux ports to handle traffic with NPU (otherwise traffic goes to Intel-NIC and then CPU). Available interfaces for NPU path.	string	Maximum length: 15	

## config priority-protocol

Parameter	Description	Type	Size	Default
bgp	Enable/disable NPU BGP priority protocol.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NPU BGP priority protocol.		
	<i>disable</i>	Disable NPU BGP priority protocol.		
slbc	Enable/disable NPU SLBC priority protocol.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NPU SLBC priority protocol.		
	<i>disable</i>	Disable NPU SLBC priority protocol.		
bfd	Enable/disable NPU BFD priority protocol.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NPU BFD priority protocol.		
	<i>disable</i>	Disable NPU BFD priority protocol.		

## config sw-eh-hash

Parameter	Description	Type	Size	Default
computation	Set hashing computation.	option	-	xor16
	<b>Option</b>	<b>Description</b>		
	<i>xor16</i>	Use XOR operator to make 16 bits hash.		
	<i>xor8</i>	Use XOR operator to make 8 bits hash.		
	<i>xor4</i>	Use XOR operator to make 4 bits hash.		
	<i>crc16</i>	Use CRC-16-CCITT polynomial to make 16 bits hash.		
ip-protocol	Include/exclude IP protocol.	option	-	include
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include IP protocol.		
	<i>exclude</i>	Exclude IP protocol.		
source-ip-upper-16	Include/exclude source IP address upper 16 bits.	option	-	include

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include source IP address upper 16 bits.		
	<i>exclude</i>	Exclude source IP address upper 16 bits.		
source-ip-lower-16	Include/exclude source IP address lower 16 bits.	option	-	include
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include source IP address lower 16 bits.		
	<i>exclude</i>	Exclude source IP address lower 16 bits.		
destination-ip-upper-16	Include/exclude destination IP address upper 16 bits.	option	-	include
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include destination IP address upper 16 bits.		
	<i>exclude</i>	Exclude destination IP address upper 16 bits.		
destination-ip-lower-16	Include/exclude destination IP address lower 16 bits.	option	-	include
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include destination IP address lower 16 bits.		
	<i>exclude</i>	Exclude destination IP address lower 16 bits.		
source-port	Include/exclude source port if TCP/UDP.	option	-	include
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include source port if TCP/UDP.		
	<i>exclude</i>	Exclude source port if TCP/UDP.		
destination-port	Include/exclude destination port if TCP/UDP.	option	-	include
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include destination port if TCP/UDP.		
	<i>exclude</i>	Exclude destination port if TCP/UDP.		
netmask-length	Network mask length.	integer	Minimum value: 17 Maximum value: 32	32

## config sw-tr-hash

Parameter	Description	Type	Size	Default
draco15	Enable/disable DRACO15 hashing.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable using DRACO15 hashing for unicast trunk traffic.		
	<i>disable</i>	Enable using DRACO15 hashing for unicast trunk traffic.		
tcp-udp-port	Include/exclude TCP/UDP source and destination port for unicast trunk traffic.	option	-	exclude
	<b>Option</b>	<b>Description</b>		
	<i>include</i>	Include TCP/UDP source and destination port for unicast trunk traffic.		
	<i>exclude</i>	Exclude TCP/UDP source and destination port for unicast trunk traffic.		

## config system ntp

Configure system NTP information.

```
config system ntp
    Description: Configure system NTP information.
    set authentication [enable|disable]
    set interface <interface-name1>, <interface-name2>, ...
    set key {password}
    set key-id {integer}
    set key-type [MD5|SHA1]
    config ntpserver
        Description: Configure the FortiGate to connect to any available third-party NTP
server.
        edit <id>
            set server {string}
            set ntpv3 [enable|disable]
            set authentication [enable|disable]
            set key {password}
            set key-id {integer}
            set interface-select-method [auto|sdwan|...]
            set interface {string}
        next
    end
    set ntpsync [enable|disable]
    set server-mode [enable|disable]
    set source-ip {ipv4-address}
    set source-ip6 {ipv6-address}
    set syncinterval {integer}
    set type [fortiguard|custom]
end
```

## config system ntp

Parameter	Description	Type	Size	Default						
authentication	Enable/disable authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable authentication.</td></tr><tr><td><i>disable</i></td><td>Disable authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable authentication.	<i>disable</i>	Disable authentication.			
Option	Description									
<i>enable</i>	Enable authentication.									
<i>disable</i>	Disable authentication.									
interface <interface-name>	FortiGate interface(s) with NTP server mode enabled. Devices on your network can contact these interfaces for NTP services. Interface name.	string	Maximum length: 79							
key	Key for authentication.	password	Not Specified							
key-id	Key ID for authentication.	integer	Minimum value: 0 Maximum value: 4294967295	0						
key-type	Key type for authentication (MD5, SHA1).	option	-	MD5						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>MD5</i></td><td>Use MD5 to authenticate the message.</td></tr><tr><td><i>SHA1</i></td><td>Use SHA1 to authenticate the message.</td></tr></table>	Option	Description	<i>MD5</i>	Use MD5 to authenticate the message.	<i>SHA1</i>	Use SHA1 to authenticate the message.			
Option	Description									
<i>MD5</i>	Use MD5 to authenticate the message.									
<i>SHA1</i>	Use SHA1 to authenticate the message.									
ntpsync	Enable/disable setting the FortiGate system time by synchronizing with an NTP Server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable synchronization with NTP Server.</td></tr><tr><td><i>disable</i></td><td>Disable synchronization with NTP Server.</td></tr></table>	Option	Description	<i>enable</i>	Enable synchronization with NTP Server.	<i>disable</i>	Disable synchronization with NTP Server.			
Option	Description									
<i>enable</i>	Enable synchronization with NTP Server.									
<i>disable</i>	Disable synchronization with NTP Server.									
server-mode	Enable/disable FortiGate NTP Server Mode. Your FortiGate becomes an NTP server for other devices on your network. The FortiGate relays NTP requests to its configured NTP server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGate NTP Server Mode.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGate NTP Server Mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiGate NTP Server Mode.	<i>disable</i>	Disable FortiGate NTP Server Mode.			
Option	Description									
<i>enable</i>	Enable FortiGate NTP Server Mode.									
<i>disable</i>	Disable FortiGate NTP Server Mode.									
source-ip	Source IP address for communication to the NTP server.	ipv4-address	Not Specified	0.0.0.0						

Parameter	Description	Type	Size	Default
source-ip6	Source IPv6 address for communication to the NTP server.	ipv6-address	Not Specified	::
syncinterval	NTP synchronization interval.	integer	Minimum value: 1 Maximum value: 1440	60
type	Use the FortiGuard NTP server or any other available NTP Server.	option	-	fortiguard
	<b>Option</b>	<b>Description</b>		
	<i>fortiguard</i>	Use the FortiGuard NTP server.		
	<i>custom</i>	Use any other available NTP server.		

### config ntpserver

Parameter	Description	Type	Size	Default
id	NTP server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server	IP address or hostname of the NTP Server.	string	Maximum length: 63	
ntp3	Enable to use NTPv3 instead of NTPv4.	option	-	disable
	Option	Description		
	enable	Enable NTPv3.		
	disable	Disable NTPv3 (use NTPv4).		
authentication	Enable/disable MD5(NTPv3)/SHA1(NTPv4) authentication.	option	-	disable
	Option	Description		
	enable	Enable MD5(NTPv3)/SHA1(NTPv4) authentication.		
	disable	Disable MD5(NTPv3)/SHA1(NTPv4) authentication.		
key	Key for MD5(NTPv3)/SHA1(NTPv4) authentication.	password	Not Specified	

Parameter	Description	Type	Size	Default								
key-id	Key ID for authentication.	integer	Minimum value: 0 Maximum value: 4294967295	0								
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.
Option	Description											
auto	Set outgoing interface automatically.											
sdwan	Set outgoing interface by SD-WAN or policy routing rules.											
specify	Set outgoing interface manually.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									

## config system object-tagging

Configure object tagging.

```
config system object-tagging
    Description: Configure object tagging.
    edit <category>
        set address [disable|mandatory|...]
        set color {integer}
        set device [disable|mandatory|...]
        set interface [disable|mandatory|...]
        set multiple [enable|disable]
        set tags <name1>, <name2>, ...
    next
end
```

## config system object-tagging

Parameter	Description	Type	Size	Default
address	Address.	option	-	optional
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable.		
	<i>mandatory</i>	Mandatory.		
	<i>optional</i>	Optional.		

Parameter	Description	Type	Size	Default								
category	Tag Category.	string	Maximum length: 63									
color	Color of icon on the GUI.	integer	Minimum value: 0 Maximum value: 32	0								
device	Device.	option	-	optional								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>mandatory</i></td><td>Mandatory.</td></tr><tr><td><i>optional</i></td><td>Optional.</td></tr></table>				Option	Description	<i>disable</i>	Disable.	<i>mandatory</i>	Mandatory.	<i>optional</i>	Optional.
	Option	Description										
	<i>disable</i>	Disable.										
	<i>mandatory</i>	Mandatory.										
<i>optional</i>	Optional.											
interface	Interface.	option	-	optional								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>mandatory</i></td><td>Mandatory.</td></tr><tr><td><i>optional</i></td><td>Optional.</td></tr></table>				Option	Description	<i>disable</i>	Disable.	<i>mandatory</i>	Mandatory.	<i>optional</i>	Optional.
	Option	Description										
	<i>disable</i>	Disable.										
	<i>mandatory</i>	Mandatory.										
<i>optional</i>	Optional.											
multiple	Allow multiple tag selection.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable multi-tagging.</td></tr><tr><td><i>disable</i></td><td>Disable multi-tagging.</td></tr></table>				Option	Description	<i>enable</i>	Enable multi-tagging.	<i>disable</i>	Disable multi-tagging.		
	Option	Description										
	<i>enable</i>	Enable multi-tagging.										
<i>disable</i>	Disable multi-tagging.											
tags <name>	Tags. Tag name.	string	Maximum length: 79									

## config system password-policy-guest-admin

Configure the password policy for guest administrators.

```

config system password-policy-guest-admin
    Description: Configure the password policy for guest administrators.
    set apply-to {option1}, {option2}, ...
    set expire-day {integer}
    set expire-status [enable|disable]
    set min-change-characters {integer}
    set min-lower-case-letter {integer}
    set min-non-alphanumeric {integer}
    set min-number {integer}
    set min-upper-case-letter {integer}
    set minimum-length {integer}

```

```

set reuse-password [enable|disable]
set status [enable|disable]
end

```

## config system password-policy-guest-admin

Parameter	Description	Type	Size	Default						
apply-to	Guest administrator to which this password policy applies.	option	-	guest-admin-password						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>guest-admin-password</td><td>Apply to guest administrator password.</td></tr></table>	Option	Description	guest-admin-password	Apply to guest administrator password.					
Option	Description									
guest-admin-password	Apply to guest administrator password.									
expire-day	Number of days after which passwords expire.	integer	Minimum value: 1 Maximum value: 999	90						
expire-status	Enable/disable password expiration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Passwords expire after expire-day days.</td></tr><tr><td>disable</td><td>Passwords do not expire.</td></tr></table>	Option	Description	enable	Passwords expire after expire-day days.	disable	Passwords do not expire.			
Option	Description									
enable	Passwords expire after expire-day days.									
disable	Passwords do not expire.									
min-change-characters	Minimum number of unique characters in new password which do not exist in old password.	integer	Minimum value: 0 Maximum value: 128	0						
min-lower-case-letter	Minimum number of lowercase characters in password.	integer	Minimum value: 0 Maximum value: 128	0						
min-non-alphanumeric	Minimum number of non-alphanumeric characters in password.	integer	Minimum value: 0 Maximum value: 128	0						
min-number	Minimum number of numeric characters in password.	integer	Minimum value: 0 Maximum value: 128	0						

Parameter	Description	Type	Size	Default						
min-upper-case-letter	Minimum number of uppercase characters in password.	integer	Minimum value: 0 Maximum value: 128	0						
minimum-length	Minimum password length.	integer	Minimum value: 8 Maximum value: 128	8						
reuse-password	Enable/disable reuse of password. If both reuse-password and min-change-characters are enabled, min-change-characters overrides.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Administrators are allowed to reuse the same password.</td></tr><tr><td>disable</td><td>Administrators must create a new password.</td></tr></table>				Option	Description	enable	Administrators are allowed to reuse the same password.	disable	Administrators must create a new password.
Option	Description									
enable	Administrators are allowed to reuse the same password.									
disable	Administrators must create a new password.									
status	Enable/disable setting a password policy for locally defined administrator passwords and IPsec VPN pre-shared keys.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable password policy.</td></tr><tr><td>disable</td><td>Disable password policy.</td></tr></table>				Option	Description	enable	Enable password policy.	disable	Disable password policy.
Option	Description									
enable	Enable password policy.									
disable	Disable password policy.									

## config system password-policy

Configure password policy for locally defined administrator passwords and IPsec VPN pre-shared keys.

```

config system password-policy
    Description: Configure password policy for locally defined administrator passwords and
IPsec VPN pre-shared keys.
    set apply-to {option1}, {option2}, ...
    set expire-day {integer}
    set expire-status [enable|disable]
    set min-change-characters {integer}
    set min-lower-case-letter {integer}
    set min-non-alphanumeric {integer}
    set min-number {integer}
    set min-upper-case-letter {integer}
    set minimum-length {integer}
    set reuse-password [enable|disable]
    set status [enable|disable]
end

```

## config system password-policy

Parameter	Description	Type	Size	Default						
apply-to	Apply password policy to administrator passwords or IPsec pre-shared keys or both. Separate entries with a space.	option	-	admin-password						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>admin-password</i></td><td>Apply to administrator passwords.</td></tr><tr><td><i>ipsec-preshared-key</i></td><td>Apply to IPsec pre-shared keys.</td></tr></table>	Option	Description	<i>admin-password</i>	Apply to administrator passwords.	<i>ipsec-preshared-key</i>	Apply to IPsec pre-shared keys.			
Option	Description									
<i>admin-password</i>	Apply to administrator passwords.									
<i>ipsec-preshared-key</i>	Apply to IPsec pre-shared keys.									
expire-day	Number of days after which passwords expire.	integer	Minimum value: 1 Maximum value: 999	90						
expire-status	Enable/disable password expiration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Passwords expire after expire-day days.</td></tr><tr><td><i>disable</i></td><td>Passwords do not expire.</td></tr></table>	Option	Description	<i>enable</i>	Passwords expire after expire-day days.	<i>disable</i>	Passwords do not expire.			
Option	Description									
<i>enable</i>	Passwords expire after expire-day days.									
<i>disable</i>	Passwords do not expire.									
min-change-characters	Minimum number of unique characters in new password which do not exist in old password.	integer	Minimum value: 0 Maximum value: 128	0						
min-lower-case-letter	Minimum number of lowercase characters in password.	integer	Minimum value: 0 Maximum value: 128	0						
min-non-alphanumeric	Minimum number of non-alphanumeric characters in password.	integer	Minimum value: 0 Maximum value: 128	0						
min-number	Minimum number of numeric characters in password.	integer	Minimum value: 0 Maximum value: 128	0						
min-upper-case-letter	Minimum number of uppercase characters in password.	integer	Minimum value: 0 Maximum value: 128	0						

Parameter	Description	Type	Size	Default						
minimum-length	Minimum password length.	integer	Minimum value: 8 Maximum value: 128	8						
reuse-password	Enable/disable reuse of password. If both reuse-password and min-change-characters are enabled, min-change-characters overrides.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Administrators are allowed to reuse the same password.</td></tr><tr><td><i>disable</i></td><td>Administrators must create a new password.</td></tr></table>	Option	Description	<i>enable</i>	Administrators are allowed to reuse the same password.	<i>disable</i>	Administrators must create a new password.			
Option	Description									
<i>enable</i>	Administrators are allowed to reuse the same password.									
<i>disable</i>	Administrators must create a new password.									
status	Enable/disable setting a password policy for locally defined administrator passwords and IPsec VPN pre-shared keys.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable password policy.</td></tr><tr><td><i>disable</i></td><td>Disable password policy.</td></tr></table>	Option	Description	<i>enable</i>	Enable password policy.	<i>disable</i>	Disable password policy.			
Option	Description									
<i>enable</i>	Enable password policy.									
<i>disable</i>	Disable password policy.									

## config system physical-switch

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1800F, FortiGate 1801F, FortiGate 200F, FortiGate 201F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 1500DT, FortiGate 1500D, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 800D, FortiGate 900D, FortiGate VM64.

Configure physical switches.

```
config system physical-switch
    Description: Configure physical switches.
    edit <name>
        set age-enable [enable|disable]
        set age-val {integer}
    next
end
```

## config system physical-switch

Parameter	Description	Type	Size	Default
age-enable	Enable/disable layer 2 age timer.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable layer 2 ageing timer.		
	<i>disable</i>	Disable layer 2 ageing timer.		

Parameter	Description	Type	Size	Default
age-val	Layer 2 table age timer value.	integer	Minimum value: 0 Maximum value: 4294967295	3158067
name	Name.	string	Maximum length: 15	

## config system pppoe-interface

Configure the PPPoE interfaces.

```
config system pppoe-interface
  Description: Configure the PPPoE interfaces.
  edit <name>
    set ac-name {string}
    set auth-type [auto|pap|...]
    set device {string}
    set dial-on-demand [enable|disable]
    set disc-retry-timeout {integer}
    set idle-timeout {integer}
    set ipunnumbered {ipv4-address}
    set ipv6 [enable|disable]
    set lcp-echo-interval {integer}
    set lcp-max-echo-fails {integer}
    set padt-retry-timeout {integer}
    set password {password}
    set pppoe-unnumbered-negotiate [enable|disable]
    set service-name {string}
    set username {string}
  next
end
```

## config system pppoe-interface

Parameter	Description	Type	Size	Default						
ac-name	PPPoE AC name.	string	Maximum length: 63							
auth-type	PPP authentication type to use.	option	-	auto						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically choose the authentication method.</td></tr><tr><td><i>pap</i></td><td>PAP authentication.</td></tr></table>				Option	Description	<i>auto</i>	Automatically choose the authentication method.	<i>pap</i>	PAP authentication.
Option	Description									
<i>auto</i>	Automatically choose the authentication method.									
<i>pap</i>	PAP authentication.									

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>chap</td><td>CHAP authentication.</td></tr><tr><td>mschapv1</td><td>MS-CHAPv1 authentication.</td></tr><tr><td>mschapv2</td><td>MS-CHAPv2 authentication.</td></tr></table>	Option	Description	chap	CHAP authentication.	mschapv1	MS-CHAPv1 authentication.	mschapv2	MS-CHAPv2 authentication.			
	Option	Description										
	chap	CHAP authentication.										
	mschapv1	MS-CHAPv1 authentication.										
mschapv2	MS-CHAPv2 authentication.											
device	Name for the physical interface.	string	Maximum length: 15									
dial-on-demand	Enable/disable dial on demand to dial the PPPoE interface when packets are routed to the PPPoE interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable dial on demand.</td></tr><tr><td>disable</td><td>Disable dial on demand.</td></tr></table>	Option	Description	enable	Enable dial on demand.	disable	Disable dial on demand.					
	Option	Description										
	enable	Enable dial on demand.										
disable	Disable dial on demand.											
disc-retry-timeout	PPPoE discovery init timeout value in.	integer	Minimum value: 0 Maximum value: 4294967295	1								
idle-timeout	PPPoE auto disconnect after idle timeout.	integer	Minimum value: 0 Maximum value: 4294967295	0								
ipunnumbered	PPPoE unnumbered IP.	ipv4-address	Not Specified	0.0.0.0								
ipv6	Enable/disable IPv6 Control Protocol (IPv6CP).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IPv6CP.</td></tr><tr><td>disable</td><td>Disable IPv6CP.</td></tr></table>	Option	Description	enable	Enable IPv6CP.	disable	Disable IPv6CP.					
	Option	Description										
	enable	Enable IPv6CP.										
disable	Disable IPv6CP.											
lcp-echo-interval	Time in seconds between PPPoE Link Control Protocol (LCP) echo requests.	integer	Minimum value: 0 Maximum value: 32767	5								

Parameter	Description	Type	Size	Default						
lcp-max-echo-fails	Maximum missed LCP echo messages before disconnect.	integer	Minimum value: 0 Maximum value: 32767	3						
name	Name of the PPPoE interface.	string	Maximum length: 15							
padt-retry-timeout	PPPoE terminate timeout value in.	integer	Minimum value: 0 Maximum value: 4294967295	1						
password	Enter the password.	password	Not Specified							
pppoe-unnumbered-negotiate	Enable/disable PPPoE unnumbered negotiation.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable PPPoE unnumbered negotiation.</td></tr><tr><td><i>disable</i></td><td>Disable PPPoE unnumbered negotiation.</td></tr></table>				Option	Description	<i>enable</i>	Enable PPPoE unnumbered negotiation.	<i>disable</i>	Disable PPPoE unnumbered negotiation.
Option	Description									
<i>enable</i>	Enable PPPoE unnumbered negotiation.									
<i>disable</i>	Disable PPPoE unnumbered negotiation.									
service-name	PPPoE service name.	string	Maximum length: 63							
username	User name.	string	Maximum length: 64							

## config system probe-response

Configure system probe response.

```

config system probe-response
    Description: Configure system probe response.
    set http-probe-value {string}
    set mode [none|http-probe|...]
    set password {password}
    set port {integer}
    set security-mode [none|authentication]
    set timeout {integer}
    set ttl-mode [reinit|decrease|...]
end

```

## config system probe-response

Parameter	Description	Type	Size	Default
http-probe-value	Value to respond to the monitoring server.	string	Maximum length: 1024	OK
mode	SLA response mode.	option	-	none
	<div><div>Option</div><div>Description</div></div>			
	<i>none</i>	Disable probe.		
	<i>http-probe</i>	HTTP probe.		
	<i>twamp</i>	Two way active measurement protocol.		
password	TWAMP responder password in authentication mode.	password	Not Specified	
port	Port number to response.	integer	Minimum value: 1 Maximum value: 65535	8008
security-mode	TWAMP responder security mode.	option	-	none
	<div><div>Option</div><div>Description</div></div>			
	<i>none</i>	Unauthenticated mode.		
	<i>authentication</i>	Authenticated mode.		
timeout	An inactivity timer for a twamp test session.	integer	Minimum value: 10 Maximum value: 3600	300
tll-mode	Mode for TWAMP packet TTL modification.	option	-	retain
	<div><div>Option</div><div>Description</div></div>			
	<i>reinit</i>	Reinitialize TTL.		
	<i>decrease</i>	Decrease TTL.		
	<i>retain</i>	Retain TTL.		

## config system proxy-arp

Configure proxy-ARP.

```
config system proxy-arp
  Description: Configure proxy-ARP.
```

```

edit <id>
    set end-ip {ipv4-address}
    set interface {string}
    set ip {ipv4-address}
next
end

```

## config system proxy-arp

Parameter	Description	Type	Size	Default
end-ip	End IP of IP range to be proxied.	ipv4-address	Not Specified	0.0.0.0
id	Unique integer ID of the entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface acting proxy-ARP.	string	Maximum length: 15	
ip	IP address or start IP to be proxied.	ipv4-address	Not Specified	0.0.0.0

## config system ptp

Configure system PTP information.

```

config system ptp
    Description: Configure system PTP information.
    set delay-mechanism [E2E|P2P]
    set interface {string}
    set mode [multicast|hybrid]
    set request-interval {integer}
    config server-interface
        Description: FortiGate interface(s) with PTP server mode enabled. Devices on your
network can contact these interfaces for PTP services.
        edit <id>
            set server-interface-name {string}
            set delay-mechanism [E2E|P2P]
        next
    end
    set server-mode [enable|disable]
    set status [enable|disable]
end

```

## config system ptp

Parameter	Description	Type	Size	Default						
delay-mechanism	End to end delay detection or peer to peer delay detection.	option	-	E2E						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>E2E</i></td><td>End to end delay detection.</td></tr><tr><td><i>P2P</i></td><td>Peer to peer delay detection.</td></tr></table>	Option	Description	<i>E2E</i>	End to end delay detection.	<i>P2P</i>	Peer to peer delay detection.			
Option	Description									
<i>E2E</i>	End to end delay detection.									
<i>P2P</i>	Peer to peer delay detection.									
interface	PTP client will reply through this interface.	string	Maximum length: 15							
mode	Multicast transmission or hybrid transmission.	option	-	multicast						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>multicast</i></td><td>Send PTP packets with multicast.</td></tr><tr><td><i>hybrid</i></td><td>Send PTP packets with unicast and multicast.</td></tr></table>	Option	Description	<i>multicast</i>	Send PTP packets with multicast.	<i>hybrid</i>	Send PTP packets with unicast and multicast.			
Option	Description									
<i>multicast</i>	Send PTP packets with multicast.									
<i>hybrid</i>	Send PTP packets with unicast and multicast.									
request-interval	The delay request value is the logarithmic mean interval in seconds between the delay request messages sent by the slave to the master.	integer	Minimum value: 1 Maximum value: 6	1						
server-mode	Enable/disable FortiGate PTP server mode. Your FortiGate becomes an PTP server for other devices on your network.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGate PTP server mode.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGate PTP server mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiGate PTP server mode.	<i>disable</i>	Disable FortiGate PTP server mode.			
Option	Description									
<i>enable</i>	Enable FortiGate PTP server mode.									
<i>disable</i>	Disable FortiGate PTP server mode.									
status	Enable/disable setting the FortiGate system time by synchronizing with an PTP Server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable synchronization with PTP Server.</td></tr><tr><td><i>disable</i></td><td>Disable synchronization with PTP Server.</td></tr></table>	Option	Description	<i>enable</i>	Enable synchronization with PTP Server.	<i>disable</i>	Disable synchronization with PTP Server.			
Option	Description									
<i>enable</i>	Enable synchronization with PTP Server.									
<i>disable</i>	Disable synchronization with PTP Server.									

## config server-interface

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server-interface-name	Interface name.	string	Maximum length: 15	
delay-mechanism	End to end delay detection or peer to peer delay detection.	option	-	E2E
	Option	Description		
	E2E	End to end delay detection.		
	P2P	Peer to peer delay detection.

## config system resource-limits

Parameter	Description	Type	Size	Default
custom-service	Maximum number of firewall custom services.	integer	Minimum value: 0 Maximum value: 4294967295	
dialup-tunnel	Maximum number of dial-up tunnels.	integer	Minimum value: 0 Maximum value: 4294967295	
firewall-address	Maximum number of firewall addresses (IPv4, IPv6, multicast).	integer	Minimum value: 0 Maximum value: 4294967295	
firewall-addrgroup	Maximum number of firewall address groups (IPv4, IPv6).	integer	Minimum value: 0 Maximum value: 4294967295	
firewall-policy	Maximum number of firewall policies (policy, DoS-policy4, DoS-policy6, multicast).	integer	Minimum value: 0 Maximum value: 4294967295	
ipsec-phase1	Maximum number of VPN IPsec phase1 tunnels.	integer	Minimum value: 0 Maximum value: 4294967295	
ipsec-phase1-interface	Maximum number of VPN IPsec phase1 interface tunnels.	integer	Minimum value: 0 Maximum value: 4294967295	
ipsec-phase2	Maximum number of VPN IPsec phase2 tunnels.	integer	Minimum value: 0 Maximum value: 4294967295	

Parameter	Description	Type	Size	Default
ipsec-phase2-interface	Maximum number of VPN IPsec phase2 interface tunnels.	integer	Minimum value: 0 Maximum value: 4294967295	
log-disk-quota	Log disk quota in megabytes (MB).	integer	Minimum value: 0 Maximum value: 4294967295 **	0
onetime-schedule	Maximum number of firewall one-time schedules.	integer	Minimum value: 0 Maximum value: 4294967295	
proxy	Maximum number of concurrent proxy users.	integer	Minimum value: 0 Maximum value: 4294967295	
recurring-schedule	Maximum number of firewall recurring schedules.	integer	Minimum value: 0 Maximum value: 4294967295	
service-group	Maximum number of firewall service groups.	integer	Minimum value: 0 Maximum value: 4294967295	
session	Maximum number of sessions.	integer	Minimum value: 0 Maximum value: 4294967295	
sslvpn	Maximum number of SSL-VPN.	integer	Minimum value: 0 Maximum value: 4294967295	

Parameter	Description	Type	Size	Default
user	Maximum number of local users.	integer	Minimum value: 0 Maximum value: 4294967295	
user-group	Maximum number of user groups.	integer	Minimum value: 0 Maximum value: 4294967295

## config system sdwan

Parameter	Description	Type	Size	Default												
duplication-max-num	Maximum number of interface members a packet is duplicated in the SD-WAN zone.	integer	Minimum value: 2 Maximum value: 4	2												
fail-alert-interfaces <name>	Physical interfaces that will be alerted. Physical interface name.	string	Maximum length: 79													
fail-detect	Enable/disable SD-WAN Internet connection status checking (failure detection).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable status checking.</td></tr><tr><td>disable</td><td>Disable status checking.</td></tr></table>				Option	Description	enable	Enable status checking.	disable	Disable status checking.						
Option	Description															
enable	Enable status checking.															
disable	Disable status checking.															
load-balance-mode	Algorithm or mode to use for load balancing Internet traffic to SD-WAN members.	option	-	source-ip-based												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>source-ip-based</td><td>Source IP load balancing. All traffic from a source IP is sent to the same interface.</td></tr><tr><td>weight-based</td><td>Weight-based load balancing. Interfaces with higher weights have higher priority and get more traffic.</td></tr><tr><td>usage-based</td><td>Usage-based load balancing. All traffic is sent to the first interface on the list. When the bandwidth on that interface exceeds the spill-over limit new traffic is sent to the next interface.</td></tr><tr><td>source-dest-ip-based</td><td>Source and destination IP load balancing. All traffic from a source IP to a destination IP is sent to the same interface.</td></tr><tr><td>measured-volume-based</td><td>Volume-based load balancing. Traffic is load balanced based on traffic volume (in bytes). More traffic is sent to interfaces with higher volume ratios.</td></tr></table>				Option	Description	source-ip-based	Source IP load balancing. All traffic from a source IP is sent to the same interface.	weight-based	Weight-based load balancing. Interfaces with higher weights have higher priority and get more traffic.	usage-based	Usage-based load balancing. All traffic is sent to the first interface on the list. When the bandwidth on that interface exceeds the spill-over limit new traffic is sent to the next interface.	source-dest-ip-based	Source and destination IP load balancing. All traffic from a source IP to a destination IP is sent to the same interface.	measured-volume-based	Volume-based load balancing. Traffic is load balanced based on traffic volume (in bytes). More traffic is sent to interfaces with higher volume ratios.
Option	Description															
source-ip-based	Source IP load balancing. All traffic from a source IP is sent to the same interface.															
weight-based	Weight-based load balancing. Interfaces with higher weights have higher priority and get more traffic.															
usage-based	Usage-based load balancing. All traffic is sent to the first interface on the list. When the bandwidth on that interface exceeds the spill-over limit new traffic is sent to the next interface.															
source-dest-ip-based	Source and destination IP load balancing. All traffic from a source IP to a destination IP is sent to the same interface.															
measured-volume-based	Volume-based load balancing. Traffic is load balanced based on traffic volume (in bytes). More traffic is sent to interfaces with higher volume ratios.															

Parameter	Description	Type	Size	Default						
neighbor-hold-boot-time	Waiting period in seconds when switching from the primary neighbor to the secondary neighbor from the neighbor start..	integer	Minimum value: 0 Maximum value: 10000000	0						
neighbor-hold-down	Enable/disable hold switching from the secondary neighbor to the primary neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable hold switching from the secondary neighbor to the primary neighbor.</td></tr><tr><td><i>disable</i></td><td>Disable hold switching from the secondary neighbor to the primary neighbor.</td></tr></table>	Option	Description	<i>enable</i>	Enable hold switching from the secondary neighbor to the primary neighbor.	<i>disable</i>	Disable hold switching from the secondary neighbor to the primary neighbor.			
Option	Description									
<i>enable</i>	Enable hold switching from the secondary neighbor to the primary neighbor.									
<i>disable</i>	Disable hold switching from the secondary neighbor to the primary neighbor.									
neighbor-hold-down-time	Waiting period in seconds when switching from the secondary neighbor to the primary neighbor when hold-down is disabled..	integer	Minimum value: 0 Maximum value: 10000000	0						
speedtest-bypass-routing	Enable/disable bypass routing when speedtest on a SD-WAN member.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SD-WAN.</td></tr><tr><td><i>enable</i></td><td>Enable SD-WAN.</td></tr></table>	Option	Description	<i>disable</i>	Disable SD-WAN.	<i>enable</i>	Enable SD-WAN.			
Option	Description									
<i>disable</i>	Disable SD-WAN.									
<i>enable</i>	Enable SD-WAN.									
status	Enable/disable SD-WAN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SD-WAN.</td></tr><tr><td><i>enable</i></td><td>Enable SD-WAN.</td></tr></table>	Option	Description	<i>disable</i>	Disable SD-WAN.	<i>enable</i>	Enable SD-WAN.			
Option	Description									
<i>disable</i>	Disable SD-WAN.									
<i>enable</i>	Enable SD-WAN.									

## config duplication

Parameter	Description	Type	Size	Default
id	Duplication rule ID.	integer	Minimum value: 1 Maximum value: 255	0

Parameter	Description	Type	Size	Default								
service-id <id>	SD-WAN service rule ID list. SD-WAN service rule ID.	integer	Minimum value: 0 Maximum value: 4294967295									
srcaddr <name>	Source address or address group names. Address or address group name.	string	Maximum length: 79									
dstaddr <name>	Destination address or address group names. Address or address group name.	string	Maximum length: 79									
srcaddr6 <name>	Source address6 or address6 group names. Address6 or address6 group name.	string	Maximum length: 79									
dstaddr6 <name>	Destination address6 or address6 group names. Address6 or address6 group name.	string	Maximum length: 79									
srcintf <name>	Incoming (ingress) interfaces or zones. Interface, zone or SDWAN zone name.	string	Maximum length: 79									
dstintf <name>	Outgoing (egress) interfaces or zones. Interface, zone or SDWAN zone name.	string	Maximum length: 79									
service <name>	Service and service group name. Service and service group name.	string	Maximum length: 79									
packet-duplication	Configure packet duplication method.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable packet duplication.</td></tr><tr><td>force</td><td>Duplicate packets across all interface members of the SD-WAN zone.</td></tr><tr><td>on-demand</td><td>Duplicate packets across all interface members of the SD-WAN zone based on the link quality.</td></tr></table>				Option	Description	disable	Disable packet duplication.	force	Duplicate packets across all interface members of the SD-WAN zone.	on-demand	Duplicate packets across all interface members of the SD-WAN zone based on the link quality.
Option	Description											
disable	Disable packet duplication.											
force	Duplicate packets across all interface members of the SD-WAN zone.											
on-demand	Duplicate packets across all interface members of the SD-WAN zone based on the link quality.											
sla-match-service	Enable/disable packet duplication matching health-check SLAs in service rule.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable packet duplication matching health-check SLAs in service rule (matching all SLAs of current defined service).</td></tr><tr><td>disable</td><td>Disable packet duplication matching health-check SLAs in service rule (matching all SLAs of all defined health-check).</td></tr></table>				Option	Description	enable	Enable packet duplication matching health-check SLAs in service rule (matching all SLAs of current defined service).	disable	Disable packet duplication matching health-check SLAs in service rule (matching all SLAs of all defined health-check).		
Option	Description											
enable	Enable packet duplication matching health-check SLAs in service rule (matching all SLAs of current defined service).											
disable	Disable packet duplication matching health-check SLAs in service rule (matching all SLAs of all defined health-check).											
packet-de-duplication	Enable/disable discarding of packets that have been duplicated.	option	-	disable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable discarding of packets that have been duplicated.		
	<i>disable</i>	Disable discarding of packets that have been duplicated.		

## config health-check

Parameter	Description	Type	Size	Default
name	Status check or health check name.	string	Maximum length: 35	
probe-packets	Enable/disable transmission of probe packets.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable transmission of probe packets.		
	<i>enable</i>	Enable transmission of probe packets.		
addr-mode	Address mode (IPv4 or IPv6).	option	-	ipv4
	<b>Option</b>	<b>Description</b>		
	<i>ipv4</i>	IPv4 mode.		
	<i>ipv6</i>	IPv6 mode.		
system-dns	Enable/disable system DNS as the probe server.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable system DNS as the probe server.		
	<i>enable</i>	Enable system DNS as the probe server.		
server	IP address or FQDN name of the server.	string	Maximum length: 79	
detect-mode	The mode determining how to detect the server.	option	-	active
	<b>Option</b>	<b>Description</b>		
	<i>active</i>	The probes are sent actively.		
	<i>passive</i>	The traffic measures health without probes.		
	<i>prefer-passive</i>	The probes are sent in case of no new traffic.		

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>remote</i></td><td>Link health obtained from remote peers.</td></tr><tr><td><i>agent-based</i></td><td>Traffic health is measured from the fabric connectors.</td></tr></table>	Option	Description	<i>remote</i>	Link health obtained from remote peers.	<i>agent-based</i>	Traffic health is measured from the fabric connectors.															
	Option	Description																				
	<i>remote</i>	Link health obtained from remote peers.																				
<i>agent-based</i>	Traffic health is measured from the fabric connectors.																					
protocol	Protocol used to determine if the FortiGate can communicate with the server.	option	-	ping																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>Use PING to test the link with the server.</td></tr><tr><td><i>tcp-echo</i></td><td>Use TCP echo to test the link with the server.</td></tr><tr><td><i>udp-echo</i></td><td>Use UDP echo to test the link with the server.</td></tr><tr><td><i>http</i></td><td>Use HTTP-GET to test the link with the server.</td></tr><tr><td><i>twamp</i></td><td>Use TWAMP to test the link with the server.</td></tr><tr><td><i>dns</i></td><td>Use DNS query to test the link with the server.</td></tr><tr><td><i>tcp-connect</i></td><td>Use a full TCP connection to test the link with the server.</td></tr><tr><td><i>ftp</i></td><td>Use FTP to test the link with the server.</td></tr></table>	Option	Description	<i>ping</i>	Use PING to test the link with the server.	<i>tcp-echo</i>	Use TCP echo to test the link with the server.	<i>udp-echo</i>	Use UDP echo to test the link with the server.	<i>http</i>	Use HTTP-GET to test the link with the server.	<i>twamp</i>	Use TWAMP to test the link with the server.	<i>dns</i>	Use DNS query to test the link with the server.	<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.	<i>ftp</i>	Use FTP to test the link with the server.			
	Option	Description																				
	<i>ping</i>	Use PING to test the link with the server.																				
	<i>tcp-echo</i>	Use TCP echo to test the link with the server.																				
	<i>udp-echo</i>	Use UDP echo to test the link with the server.																				
	<i>http</i>	Use HTTP-GET to test the link with the server.																				
	<i>twamp</i>	Use TWAMP to test the link with the server.																				
	<i>dns</i>	Use DNS query to test the link with the server.																				
	<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.																				
<i>ftp</i>	Use FTP to test the link with the server.																					
port	Port number used to communicate with the server over the selected protocol.	integer	Minimum value: 0 Maximum value: 65535	0																		
quality-measured-method	Method to measure the quality of tcp-connect.	option	-	half-open																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>half-open</i></td><td>Measure the round trip between syn and ack.</td></tr><tr><td><i>half-close</i></td><td>Measure the round trip between fin and ack.</td></tr></table>	Option	Description	<i>half-open</i>	Measure the round trip between syn and ack.	<i>half-close</i>	Measure the round trip between fin and ack.															
	Option	Description																				
	<i>half-open</i>	Measure the round trip between syn and ack.																				
<i>half-close</i>	Measure the round trip between fin and ack.																					
security-mode	Twamp controller security mode.	option	-	none																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Unauthenticated mode.</td></tr><tr><td><i>authentication</i></td><td>Authenticated mode.</td></tr></table>	Option	Description	<i>none</i>	Unauthenticated mode.	<i>authentication</i>	Authenticated mode.															
	Option	Description																				
	<i>none</i>	Unauthenticated mode.																				
<i>authentication</i>	Authenticated mode.																					
user	The user name to access probe server.	string	Maximum length: 64																			

Parameter	Description	Type	Size	Default						
password	TWAMP controller password in authentication mode.	password	Not Specified							
packet-size	Packet size of a TWAMP test session.	integer	Minimum value: 64 Maximum value: 1024	64						
ha-priority	HA election priority.	integer	Minimum value: 1 Maximum value: 50	1						
ftp-mode	FTP mode.	option	-	passive						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>passive</i></td><td>The FTP health-check initiates and establishes the data connection.</td></tr><tr><td><i>port</i></td><td>The FTP server initiates and establishes the data connection.</td></tr></table>				Option	Description	<i>passive</i>	The FTP health-check initiates and establishes the data connection.	<i>port</i>	The FTP server initiates and establishes the data connection.
	Option	Description								
	<i>passive</i>	The FTP health-check initiates and establishes the data connection.								
<i>port</i>	The FTP server initiates and establishes the data connection.									
ftp-file	Full path and file name on the FTP server to download for FTP health-check to probe.	string	Maximum length: 254							
http-get	URL used to communicate with the server if the protocol is HTTP.	string	Maximum length: 1024	/						
http-agent	String in the http-agent field in the HTTP header.	string	Maximum length: 1024	Chrome/ Safari/						
http-match	Response string expected from the server if the protocol is HTTP.	string	Maximum length: 1024							
dns-request-domain	Fully qualified domain name to resolve for the DNS probe.	string	Maximum length: 255	www.example.com						
dns-match-ip	Response IP expected from DNS server if the protocol is DNS.	ipv4-address	Not Specified	0.0.0.0						
interval	Status check interval in milliseconds, or the time between attempting to connect to the server.	integer	Minimum value: 20 Maximum value: 3600000	500						
probe-timeout	Time to wait before a probe packet is considered lost.	integer	Minimum value: 20 Maximum value: 3600000	500						

Parameter	Description	Type	Size	Default						
failtime	Number of failures before server is considered lost.	integer	Minimum value: 1 Maximum value: 3600	5						
recoverytime	Number of successful responses received before server is considered recovered.	integer	Minimum value: 1 Maximum value: 3600	5						
probe-count	Number of most recent probes that should be used to calculate latency and jitter.	integer	Minimum value: 5 Maximum value: 30	30						
diffservcode	Differentiated services code point (DSCP) in the IP header of the probe packet.	user	Not Specified							
update-cascade-interface	Enable/disable update cascade interface.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable update cascade interface.</td></tr><tr><td>disable</td><td>Disable update cascade interface.</td></tr></table>				Option	Description	enable	Enable update cascade interface.	disable	Disable update cascade interface.
Option	Description									
enable	Enable update cascade interface.									
disable	Disable update cascade interface.									
update-static-route	Enable/disable updating the static route.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable updating the static route.</td></tr><tr><td>disable</td><td>Disable updating the static route.</td></tr></table>				Option	Description	enable	Enable updating the static route.	disable	Disable updating the static route.
Option	Description									
enable	Enable updating the static route.									
disable	Disable updating the static route.									
embed-measured-health	Enable/disable embedding measured health information.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable embed measured health.</td></tr><tr><td>disable</td><td>Disable embed measured health.</td></tr></table>				Option	Description	enable	Enable embed measured health.	disable	Disable embed measured health.
Option	Description									
enable	Enable embed measured health.									
disable	Disable embed measured health.									
sla-id-redistribute	Select the ID from the SLA sub-table. The selected SLA's priority value will be distributed into the routing table.	integer	Minimum value: 0 Maximum value: 32	0						

Parameter	Description	Type	Size	Default
sla-fail-log-period	Time interval in seconds that SLA fail log messages will be generated.	integer	Minimum value: 0 Maximum value: 3600	0
sla-pass-log-period	Time interval in seconds that SLA pass log messages will be generated.	integer	Minimum value: 0 Maximum value: 3600	0
threshold-warning-packetloss	Warning threshold for packet loss.	integer	Minimum value: 0 Maximum value: 100	0
threshold-alert-packetloss	Alert threshold for packet loss.	integer	Minimum value: 0 Maximum value: 100	0
threshold-warning-latency	Warning threshold for latency.	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-alert-latency	Alert threshold for latency.	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-warning-jitter	Warning threshold for jitter.	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-alert-jitter	Alert threshold for jitter.	integer	Minimum value: 0 Maximum value: 4294967295	0
vrf	Virtual Routing Forwarding ID.	integer	Minimum value: 0 Maximum value: 251	0

Parameter	Description	Type	Size	Default								
source	Source IP address used in the health-check packet to the server.	ipv4-address	Not Specified	0.0.0.0								
members <seq-num>	Member sequence number list. Member sequence number.	integer	Minimum value: 0 Maximum value: 4294967295									
mos-codec	Codec to use for MOS calculation.	option	-	g711								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>g711</td><td>Calculate MOS based on the G.711 codec.</td></tr><tr><td>g722</td><td>Calculate MOS based on the G.722 codec.</td></tr><tr><td>g729</td><td>Calculate MOS based on the G.729 codec.</td></tr></table>				Option	Description	g711	Calculate MOS based on the G.711 codec.	g722	Calculate MOS based on the G.722 codec.	g729	Calculate MOS based on the G.729 codec.
Option	Description											
g711	Calculate MOS based on the G.711 codec.											
g722	Calculate MOS based on the G.722 codec.											
g729	Calculate MOS based on the G.729 codec.											

### config sla

Parameter	Description	Type	Size	Default
health-check	SD-WAN health-check.	string	Maximum length: 35	
id	SLA ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

### config members

Parameter	Description	Type	Size	Default
seq-num	Sequence number.	integer	Minimum value: 0 Maximum value: 512	0
interface	Interface name.	string	Maximum length: 15	
zone	Zone name.	string	Maximum length: 35	virtual-wan-link
gateway	The default gateway for this interface. Usually the default gateway of the Internet service provider that this interface is connected to.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
source	Source IP address used in the health-check packet to the server.	ipv4-address	Not Specified	0.0.0.0
gateway6	IPv6 gateway.	ipv6-address	Not Specified	::
source6	Source IPv6 address used in the health-check packet to the server.	ipv6-address	Not Specified	::
cost	Cost of this interface for services in SLA mode.	integer	Minimum value: 0 Maximum value: 4294967295	0
weight	Weight of this interface for weighted load balancing. More traffic is directed to interfaces with higher weights.	integer	Minimum value: 1 Maximum value: 255	1
priority	Priority of the interface for IPv4. Used for SD-WAN rules or priority rules.	integer	Minimum value: 1 Maximum value: 65535	1
priority6	Priority of the interface for IPv6. Used for SD-WAN rules or priority rules.	integer	Minimum value: 1 Maximum value: 65535	1024
spillover-threshold	Egress spillover threshold for this interface. When this traffic volume threshold is reached, new sessions spill over to other interfaces in the SD-WAN.	integer	Minimum value: 0 Maximum value: 16776000	0
ingress-spillover-threshold	Ingress spillover threshold for this interface. When this traffic volume threshold is reached, new sessions spill over to other interfaces in the SD-WAN.	integer	Minimum value: 0 Maximum value: 16776000	0
volume-ratio	Measured volume ratio.	integer	Minimum value: 1 Maximum value: 255	1
status	Enable/disable this interface in the SD-WAN.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable this interface in the SD-WAN.		
	<i>enable</i>	Enable this interface in the SD-WAN.		
comment	Comments.	var-string	Maximum length: 255	

## config neighbor

Parameter	Description	Type	Size	Default
ip	IP/IPv6 address of neighbor.	string	Maximum length: 45	
member <seq-num>	Member sequence number list. Member sequence number.	integer	Minimum value: 0 Maximum value: 4294967295	
minimum-sla-meet-members	Minimum number of members which meet SLA when the neighbor is preferred.	integer	Minimum value: 1 Maximum value: 255	1
mode	What metric to select the neighbor.	option	-	sla
	<b>Option</b>	<b>Description</b>		
	<i>sla</i>	Select neighbor based on SLA link quality.		
	<i>speedtest</i>	Select neighbor based on the speedtest status.		
role	Role of neighbor.	option	-	standalone
	<b>Option</b>	<b>Description</b>		
	<i>standalone</i>	Standalone neighbor.		
	<i>primary</i>	Primary neighbor.		
	<i>secondary</i>	Secondary neighbor.		
health-check	SD-WAN health-check name.	string	Maximum length: 35	
sla-id	SLA ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config service

Parameter	Description	Type	Size	Default												
id	SD-WAN rule ID.	integer	Minimum value: 1 Maximum value: 4000	0												
name	SD-WAN rule name.	string	Maximum length: 35													
addr-mode	Address mode (IPv4 or IPv6).	option	-	ipv4												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>IPv4 mode.</td></tr><tr><td>ipv6</td><td>IPv6 mode.</td></tr></table>				Option	Description	ipv4	IPv4 mode.	ipv6	IPv6 mode.						
Option	Description															
ipv4	IPv4 mode.															
ipv6	IPv6 mode.															
input-device <name>	Source interface name. Interface name.	string	Maximum length: 79													
input-device-negate	Enable/disable negation of input device match.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable negation of input device match.</td></tr><tr><td>disable</td><td>Disable negation of input device match.</td></tr></table>				Option	Description	enable	Enable negation of input device match.	disable	Disable negation of input device match.						
Option	Description															
enable	Enable negation of input device match.															
disable	Disable negation of input device match.															
input-zone <name>	Source input-zone name. Zone.	string	Maximum length: 79													
mode	Control how the SD-WAN rule sets the priority of interfaces in the SD-WAN.	option	-	manual												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Assign interfaces a priority based on quality.</td></tr><tr><td>manual</td><td>Assign interfaces a priority manually.</td></tr><tr><td>priority</td><td>Assign interfaces a priority based on the link-cost-factor quality of the interface.</td></tr><tr><td>sla</td><td>Assign interfaces a priority based on selected SLA settings.</td></tr><tr><td>load-balance</td><td>Distribute traffic among all available links based on round robin. ADVPN feature is not supported in the mode.</td></tr></table>				Option	Description	auto	Assign interfaces a priority based on quality.	manual	Assign interfaces a priority manually.	priority	Assign interfaces a priority based on the link-cost-factor quality of the interface.	sla	Assign interfaces a priority based on selected SLA settings.	load-balance	Distribute traffic among all available links based on round robin. ADVPN feature is not supported in the mode.
Option	Description															
auto	Assign interfaces a priority based on quality.															
manual	Assign interfaces a priority manually.															
priority	Assign interfaces a priority based on the link-cost-factor quality of the interface.															
sla	Assign interfaces a priority based on selected SLA settings.															
load-balance	Distribute traffic among all available links based on round robin. ADVPN feature is not supported in the mode.															

Parameter	Description	Type	Size	Default
minimum-sla-meet-members	Minimum number of members which meet SLA.	integer	Minimum value: 0 Maximum value: 255	0
hash-mode	Hash algorithm for selected priority members for load balance mode.	option	-	round-robin
	<b>Option</b>	<b>Description</b>		
	<i>round-robin</i>	All traffic are distributed to selected interfaces in equal portions and circular order.		
	<i>source-ip-based</i>	All traffic from a source IP is sent to the same interface.		
	<i>source-dest-ip-based</i>	All traffic from a source IP to a destination IP is sent to the same interface.		
	<i>inbandwidth</i>	All traffic are distributed to a selected interface with most available bandwidth for incoming traffic.		
	<i>outbandwidth</i>	All traffic are distributed to a selected interface with most available bandwidth for outgoing traffic.		
	<i>bibandwidth</i>	All traffic are distributed to a selected interface with most available bandwidth for both incoming and outgoing traffic.		
role	Service role to work with neighbor.	option	-	standalone
	<b>Option</b>	<b>Description</b>		
	<i>standalone</i>	Standalone service.		
	<i>primary</i>	Primary service for primary neighbor.		
	<i>secondary</i>	Secondary service for secondary neighbor.		
standalone-action	Enable/disable service when selected neighbor role is standalone while service role is not standalone.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable service when selected neighbor role is standalone.		
	<i>disable</i>	Disable service when selected neighbor role is standalone.		
quality-link	Quality grade.	integer	Minimum value: 0 Maximum value: 255	0
tos	Type of service bit pattern.	user	Not Specified	

Parameter	Description	Type	Size	Default						
tos-mask	Type of service evaluated bits.	user	Not Specified							
protocol	Protocol number.	integer	Minimum value: 0 Maximum value: 255	0						
start-port	Start destination port number.	integer	Minimum value: 0 Maximum value: 65535	1						
end-port	End destination port number.	integer	Minimum value: 0 Maximum value: 65535	65535						
route-tag	IPv4 route map route-tag.	integer	Minimum value: 0 Maximum value: 4294967295	0						
dst <name>	Destination address name. Address or address group name.	string	Maximum length: 79							
dst-negate	Enable/disable negation of destination address match.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable destination address negation.</td></tr><tr><td>disable</td><td>Disable destination address negation.</td></tr></table>				Option	Description	enable	Enable destination address negation.	disable	Disable destination address negation.
Option	Description									
enable	Enable destination address negation.									
disable	Disable destination address negation.									
src <name>	Source address name. Address or address group name.	string	Maximum length: 79							
dst6 <name>	Destination address6 name. Address6 or address6 group name.	string	Maximum length: 79							
src6 <name>	Source address6 name. Address6 or address6 group name.	string	Maximum length: 79							
src-negate	Enable/disable negation of source address match.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable source address negation.</td></tr><tr><td>disable</td><td>Disable source address negation.</td></tr></table>				Option	Description	enable	Enable source address negation.	disable	Disable source address negation.
Option	Description									
enable	Enable source address negation.									
disable	Disable source address negation.									

Parameter	Description	Type	Size	Default						
users <name>	User name. User name.	string	Maximum length: 79							
groups <name>	User groups. Group name.	string	Maximum length: 79							
internet-service	Enable/disable use of Internet service for application-based load balancing.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable cloud service to support application-based load balancing.</td></tr><tr><td>disable</td><td>Disable cloud service to support application-based load balancing.</td></tr></table>	Option	Description	enable	Enable cloud service to support application-based load balancing.	disable	Disable cloud service to support application-based load balancing.			
Option	Description									
enable	Enable cloud service to support application-based load balancing.									
disable	Disable cloud service to support application-based load balancing.									
internet-service-custom <name>	Custom Internet service name list. Custom Internet service name.	string	Maximum length: 79							
internet-service-custom-group <name>	Custom Internet Service group list. Custom Internet Service group name.	string	Maximum length: 79							
internet-service-name <name>	Internet service name list. Internet service name.	string	Maximum length: 79							
internet-service-group <name>	Internet Service group list. Internet Service group name.	string	Maximum length: 79							
internet-service-app-ctrl <id>	Application control based Internet Service ID list. Application control based Internet Service ID.	integer	Minimum value: 0 Maximum value: 4294967295							
internet-service-app-ctrl-group <name>	Application control based Internet Service group list. Application control based Internet Service group name.	string	Maximum length: 79							
internet-service-app-ctrl-category <id>	IDs of one or more application control categories. Application control category ID.	integer	Minimum value: 0 Maximum value: 4294967295							
health-check <name>	Health check list. Health check name.	string	Maximum length: 79							
link-cost-factor	Link cost factor.	option	-	latency						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>latency</i>	Select link based on latency.		
	<i>jitter</i>	Select link based on jitter.		
	<i>packet-loss</i>	Select link based on packet loss.		
	<i>inbandwidth</i>	Select link based on available bandwidth of incoming traffic.		
	<i>outbandwidth</i>	Select link based on available bandwidth of outgoing traffic.		
	<i>bibandwidth</i>	Select link based on available bandwidth of bidirectional traffic.		
	<i>custom-profile-1</i>	Select link based on customized profile.		
packet-loss-weight	Coefficient of packet-loss in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
latency-weight	Coefficient of latency in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
jitter-weight	Coefficient of jitter in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
bandwidth-weight	Coefficient of reciprocal of available bidirectional bandwidth in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
link-cost-threshold	Percentage threshold change of link cost values that will result in policy route regeneration.	integer	Minimum value: 0 Maximum value: 10000000	10
hold-down-time	Waiting period in seconds when switching from the back-up member to the primary member.	integer	Minimum value: 0 Maximum value: 10000000	0

Parameter	Description	Type	Size	Default						
dscp-forward	Enable/disable forward traffic DSCP tag.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of forward DSCP tag.</td></tr><tr><td>disable</td><td>Disable use of forward DSCP tag.</td></tr></table>	Option	Description	enable	Enable use of forward DSCP tag.	disable	Disable use of forward DSCP tag.			
	Option	Description								
	enable	Enable use of forward DSCP tag.								
	disable	Disable use of forward DSCP tag.								
dscp-reverse	Enable/disable reverse traffic DSCP tag.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of reverse DSCP tag.</td></tr><tr><td>disable</td><td>Disable use of reverse DSCP tag.</td></tr></table>	Option	Description	enable	Enable use of reverse DSCP tag.	disable	Disable use of reverse DSCP tag.			
	Option	Description								
	enable	Enable use of reverse DSCP tag.								
	disable	Disable use of reverse DSCP tag.								
dscp-forward-tag	Forward traffic DSCP tag.	user	Not Specified							
dscp-reverse-tag	Reverse traffic DSCP tag.	user	Not Specified							
priority-members <seq-num>	Member sequence number list. Member sequence number.	integer	Minimum value: 0 Maximum value: 4294967295							
priority-zone <name>	Priority zone name list. Priority zone name.	string	Maximum length: 79							
status	Enable/disable SD-WAN service.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable SD-WAN service.</td></tr><tr><td>disable</td><td>Disable SD-WAN service.</td></tr></table>	Option	Description	enable	Enable SD-WAN service.	disable	Disable SD-WAN service.			
	Option	Description								
	enable	Enable SD-WAN service.								
	disable	Disable SD-WAN service.								
gateway	Enable/disable SD-WAN service gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable SD-WAN service gateway.</td></tr><tr><td>disable</td><td>Disable SD-WAN service gateway.</td></tr></table>	Option	Description	enable	Enable SD-WAN service gateway.	disable	Disable SD-WAN service gateway.			
	Option	Description								
	enable	Enable SD-WAN service gateway.								
	disable	Disable SD-WAN service gateway.								
default	Enable/disable use of SD-WAN as default service.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of SD-WAN as default service.</td></tr><tr><td>disable</td><td>Disable use of SD-WAN as default service.</td></tr></table>	Option	Description	enable	Enable use of SD-WAN as default service.	disable	Disable use of SD-WAN as default service.			
	Option	Description								
	enable	Enable use of SD-WAN as default service.								
	disable	Disable use of SD-WAN as default service.								

Parameter	Description	Type	Size	Default										
sla-compare-method	Method to compare SLA value for SLA mode.	option	-	order										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>order</td><td>Compare SLA value based on the order of health-check.</td></tr><tr><td>number</td><td>Compare SLA value based on the number of satisfied health-check. Limits health-checks to only configured member interfaces.</td></tr></table>	Option	Description	order	Compare SLA value based on the order of health-check.	number	Compare SLA value based on the number of satisfied health-check. Limits health-checks to only configured member interfaces.							
Option	Description													
order	Compare SLA value based on the order of health-check.													
number	Compare SLA value based on the number of satisfied health-check. Limits health-checks to only configured member interfaces.													
tie-break	Method of selecting member if more than one meets the SLA.	option	-	zone										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>zone</td><td>Use the setting that is configured for the members' zone.</td></tr><tr><td>cfg-order</td><td>Members that meet the SLA are selected in the order they are configured.</td></tr><tr><td>fib-best-match</td><td>Members that meet the SLA are selected that match the longest prefix in the routing table.</td></tr><tr><td>input-device</td><td>Members that meet the SLA are selected by matching the input device.</td></tr></table>	Option	Description	zone	Use the setting that is configured for the members' zone.	cfg-order	Members that meet the SLA are selected in the order they are configured.	fib-best-match	Members that meet the SLA are selected that match the longest prefix in the routing table.	input-device	Members that meet the SLA are selected by matching the input device.			
Option	Description													
zone	Use the setting that is configured for the members' zone.													
cfg-order	Members that meet the SLA are selected in the order they are configured.													
fib-best-match	Members that meet the SLA are selected that match the longest prefix in the routing table.													
input-device	Members that meet the SLA are selected by matching the input device.													
use-shortcut-sla	Enable/disable use of ADVPN shortcut for quality comparison.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of ADVPN shortcut for quality comparison.</td></tr><tr><td>disable</td><td>Disable use of ADVPN shortcut for quality comparison.</td></tr></table>	Option	Description	enable	Enable use of ADVPN shortcut for quality comparison.	disable	Disable use of ADVPN shortcut for quality comparison.							
Option	Description													
enable	Enable use of ADVPN shortcut for quality comparison.													
disable	Disable use of ADVPN shortcut for quality comparison.													
passive-measurement	Enable/disable passive measurement based on the service criteria.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable passive measurement of user traffic.</td></tr><tr><td>disable</td><td>Disable passive measurement of user traffic.</td></tr></table>	Option	Description	enable	Enable passive measurement of user traffic.	disable	Disable passive measurement of user traffic.							
Option	Description													
enable	Enable passive measurement of user traffic.													
disable	Disable passive measurement of user traffic.													
agent-exclusive	Set/unset the service as agent use exclusively.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Set the service as agent use exclusively.</td></tr><tr><td>disable</td><td>Unset the service as agent use exclusively.</td></tr></table>	Option	Description	enable	Set the service as agent use exclusively.	disable	Unset the service as agent use exclusively.							
Option	Description													
enable	Set the service as agent use exclusively.													
disable	Unset the service as agent use exclusively.													

## config sla

Parameter	Description	Type	Size	Default
health-check	SD-WAN health-check.	string	Maximum length: 35	
id	SLA ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config zone

Parameter	Description	Type	Size	Default
name	Zone name.	string	Maximum length: 35	
service-sla-tie-break	Method of selecting member if more than one meets the SLA.	option	-	cfg-order
	<b>Option</b>	<b>Description</b>		
	<i>cfg-order</i>	Members that meet the SLA are selected in the order they are configured.		
	<i>fib-best-match</i>	Members that meet the SLA are selected that match the longest prefix in the routing table.		
	<i>input-device</i>	Members that meet the SLA are selected by matching the input device.		

## config system session-helper

Configure session helper.

```
config system session-helper
  Description: Configure session helper.
  edit <id>
    set name [ftp|tftp|...]
    set port {integer}
    set protocol {integer}
  next
end
```

## config system session-helper

Parameter	Description	Type	Size	Default

## config system session-ttl

Configure global session TTL timers for this FortiGate.

```

config system session-ttl
  Description: Configure global session TTL timers for this FortiGate.
  set default {user}
  config port
    Description: Session TTL port.
    edit <id>
      set protocol {integer}
      set start-port {integer}
      set end-port {integer}
      set timeout {user}
    next
  end
end

```

## config system session-ttl

Parameter	Description	Type	Size	Default
default	Default timeout.	user	Not Specified	

## config port

Parameter	Description	Type	Size	Default
id	Table entry ID.	integer	Minimum value: 0 Maximum value: 65535	0
protocol	Protocol.	integer	Minimum value: 0 Maximum value: 255	0
start-port	Start port number.	integer	Minimum value: 0 Maximum value: 65535	0
end-port	End port number.	integer	Minimum value: 0 Maximum value: 65535	0
timeout	Session timeout (TTL).	user	Not Specified	

---

set wccp-cache-engine [enable|disable]

```

end

## config system settings

Parameter	Description	Type	Size	Default
allow-linkdown-path	Enable/disable link down path.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Allow link down path.		
	<i>disable</i>	Do not allow link down path.		
allow-subnet-overlap	Enable/disable allowing interface subnets to use overlapping IP addresses.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable overlapping subnets.		
	<i>disable</i>	Disable overlapping subnets.		
application-bandwidth-tracking	Enable/disable application bandwidth tracking.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable application bandwidth tracking.		
	<i>enable</i>	Enable application bandwidth tracking.		
asymroute	Enable/disable IPv4 asymmetric routing.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IPv4 asymmetric routing.		
	<i>disable</i>	Disable IPv4 asymmetric routing.		
asymroute-icmp	Enable/disable ICMP asymmetric routing.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable ICMP asymmetric routing.		
	<i>disable</i>	Disable ICMP asymmetric routing.		
asymroute6	Enable/disable asymmetric IPv6 routing.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable asymmetric IPv6 routing.		
	<i>disable</i>	Disable asymmetric IPv6 routing.		
asymroute6-icmp	Enable/disable asymmetric ICMPv6 routing.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable asymmetric ICMPv6 routing.		
	<i>disable</i>	Disable asymmetric ICMPv6 routing.		
auxiliary-session *	Enable/disable auxiliary session.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable auxiliary session for this VDOM.		
	<i>disable</i>	Disable auxiliary session for this VDOM.		
bfd	Enable/disable Bi-directional Forwarding Detection (BFD) on all interfaces.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Bi-directional Forwarding Detection (BFD) on all interfaces.		
	<i>disable</i>	Disable Bi-directional Forwarding Detection (BFD) on all interfaces.		
bfd-desired-min-tx	BFD desired minimal transmit interval.	integer	Minimum value: 1 Maximum value: 100000	250
bfd-detect-mult	BFD detection multiplier.	integer	Minimum value: 1 Maximum value: 50	3
bfd-dont-enforce-src-port	Enable to not enforce verifying the source port of BFD Packets.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable verifying the source port of BFD Packets.		
	<i>disable</i>	Disable verifying the source port of BFD Packets.		
bfd-required-min-rx	BFD required minimal receive interval.	integer	Minimum value: 1 Maximum value: 100000	250
block-land-attack	Enable/disable blocking of land attacks.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Do not block land attack.		
	<i>enable</i>	Block land attack.		
central-nat	Enable/disable central NAT.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable central NAT.		
	<i>disable</i>	Disable central NAT.		
comments	VDOM comments.	var-string	Maximum length: 255	

Parameter	Description	Type	Size	Default						
default-app-port-as-service	Enable/disable policy service enforcement based on application default ports.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
default-policy-expiry-days	Default policy expiry in days.	integer	Minimum value: 0 Maximum value: 365	30						
default-voip-alg-mode	Configure how the FortiGate handles VoIP traffic when a policy that accepts the traffic doesn't include a VoIP profile.	option	-	proxy-based						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>proxy-based</i></td><td>Use a default proxy-based VoIP ALG.</td></tr><tr><td><i>kernel-helper-based</i></td><td>Use the SIP session helper.</td></tr></table>	Option	Description	<i>proxy-based</i>	Use a default proxy-based VoIP ALG.	<i>kernel-helper-based</i>	Use the SIP session helper.			
Option	Description									
<i>proxy-based</i>	Use a default proxy-based VoIP ALG.									
<i>kernel-helper-based</i>	Use the SIP session helper.									
deny-tcp-with-icmp	Enable/disable denying TCP by sending an ICMP communication prohibited packet.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Deny TCP with ICMP.</td></tr><tr><td><i>disable</i></td><td>Disable denying TCP with ICMP.</td></tr></table>	Option	Description	<i>enable</i>	Deny TCP with ICMP.	<i>disable</i>	Disable denying TCP with ICMP.			
Option	Description									
<i>enable</i>	Deny TCP with ICMP.									
<i>disable</i>	Disable denying TCP with ICMP.									
detect-unknown-esp	Enable/disable detection of unknown ESP packets.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable detection of unknown ESP packets and drop the ESP packet if it's unknown.</td></tr><tr><td><i>disable</i></td><td>Disable detection of unknown ESP packets.</td></tr></table>	Option	Description	<i>enable</i>	Enable detection of unknown ESP packets and drop the ESP packet if it's unknown.	<i>disable</i>	Disable detection of unknown ESP packets.			
Option	Description									
<i>enable</i>	Enable detection of unknown ESP packets and drop the ESP packet if it's unknown.									
<i>disable</i>	Disable detection of unknown ESP packets.									
device	Interface to use for management access for NAT mode.	string	Maximum length: 35							
dhcp-proxy	Enable/disable the DHCP Proxy.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the DHCP proxy.</td></tr></table>	Option	Description	<i>enable</i>	Enable the DHCP proxy.					
Option	Description									
<i>enable</i>	Enable the DHCP proxy.									

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable the DHCP proxy.</td></tr></table>	Option	Description	<i>disable</i>	Disable the DHCP proxy.							
	Option	Description										
<i>disable</i>	Disable the DHCP proxy.											
dhcp-proxy-interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
dhcp-proxy-interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.			
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
dhcp-server-ip	DHCP Server IPv4 address.	user	Not Specified									
dhcp6-server-ip	DHCPv6 server IPv6 address.	user	Not Specified									
discovered-device-timeout	Timeout for discovered devices.	integer	Minimum value: 1 Maximum value: 365	28								
dyn-addr-session-check	Enable/disable dirty session check caused by dynamic address updates.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable dirty session check caused by dynamic address updates.</td></tr><tr><td><i>disable</i></td><td>Disable dirty session check caused by dynamic address updates.</td></tr></table>	Option	Description	<i>enable</i>	Enable dirty session check caused by dynamic address updates.	<i>disable</i>	Disable dirty session check caused by dynamic address updates.					
	Option	Description										
	<i>enable</i>	Enable dirty session check caused by dynamic address updates.										
<i>disable</i>	Disable dirty session check caused by dynamic address updates.											
ecmp-max-paths	Maximum number of Equal Cost Multi-Path.	integer	Minimum value: 1 Maximum value: 255	255								
email-portal-check-dns	Enable/disable using DNS to validate email addresses collected by a captive portal.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable email address checking with DNS.</td></tr><tr><td><i>enable</i></td><td>Enable email address checking with DNS.</td></tr></table>	Option	Description	<i>disable</i>	Disable email address checking with DNS.	<i>enable</i>	Enable email address checking with DNS.					
	Option	Description										
	<i>disable</i>	Disable email address checking with DNS.										
<i>enable</i>	Enable email address checking with DNS.											
ext-resource-session-check	Enable/disable dirty session check caused by external resource updates.	option	-	disable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable dirty session check caused by external resource updates.		
	<i>disable</i>	Disable dirty session check caused by external resource updates.		
firewall-session-dirty	Select how to manage sessions affected by firewall policy configuration changes.	option	-	check-all
	<b>Option</b>	<b>Description</b>		
	<i>check-all</i>	All sessions affected by a firewall policy change are flushed from the session table. When new packets are received they are re-evaluated by stateful inspection and re-added to the session table.		
	<i>check-new</i>	Established sessions for changed firewall policies continue without being affected by the policy configuration change. New sessions are evaluated according to the new firewall policy configuration.		
	<i>check-policy-option</i>	Sessions are managed individually depending on the firewall policy. Some sessions may restart. Some may continue.		
fqdn-session-check	Enable/disable dirty session check caused by FQDN updates.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable dirty session check caused by FQDN updates.		
	<i>disable</i>	Disable dirty session check caused by FQDN updates.		
fw-session-hairpin	Enable/disable checking for a matching policy each time hairpin traffic goes through the FortiGate.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Perform a policy check every time.		
	<i>disable</i>	Perform a policy check only the first time the session is received.		
gateway	Transparent mode IPv4 default gateway IP address.	ipv4-address	Not Specified	0.0.0.0
gateway6	Transparent mode IPv6 default gateway IP address.	ipv6-address	Not Specified	::
gui-advanced-policy	Enable/disable advanced policy configuration on the GUI.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable advanced policy configuration on the GUI.		

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Disable advanced policy configuration on the GUI.		
gui-advanced-wireless-features	Enable/disable advanced wireless features in GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable advanced wireless features in GUI.		
	<i>disable</i>	Disable advanced wireless features in GUI.		
gui-allow-unnamed-policy	Enable/disable the requirement for policy naming on the GUI.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable the requirement for policy naming on the GUI.		
	<i>disable</i>	Disable the requirement for policy naming on the GUI.		
gui-antivirus	Enable/disable AntiVirus on the GUI.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable AntiVirus on the GUI.		
	<i>disable</i>	Disable AntiVirus on the GUI.		
gui-ap-profile	Enable/disable FortiAP profiles on the GUI.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable FortiAP profiles on the GUI.		
	<i>disable</i>	Disable FortiAP profiles on the GUI.		
gui-application-control	Enable/disable application control on the GUI.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable application control on the GUI.		
	<i>disable</i>	Disable application control on the GUI.		
gui-default-policy-columns	Default columns to display for policy lists on GUI. Select column name. <name>	string	Maximum length: 79	

Parameter	Description	Type	Size	Default						
gui-dhcp-advanced	Enable/disable advanced DHCP options on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable advanced DHCP options on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable advanced DHCP options on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable advanced DHCP options on the GUI.	<i>disable</i>	Disable advanced DHCP options on the GUI.			
Option	Description									
<i>enable</i>	Enable advanced DHCP options on the GUI.									
<i>disable</i>	Disable advanced DHCP options on the GUI.									
gui-dlp-profile	Enable/disable Data Leak Prevention on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Data Leak Prevention on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Data Leak Prevention on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Data Leak Prevention on the GUI.	<i>disable</i>	Disable Data Leak Prevention on the GUI.			
Option	Description									
<i>enable</i>	Enable Data Leak Prevention on the GUI.									
<i>disable</i>	Disable Data Leak Prevention on the GUI.									
gui-dns-database	Enable/disable DNS database settings on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS database settings on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable DNS database settings on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable DNS database settings on the GUI.	<i>disable</i>	Disable DNS database settings on the GUI.			
Option	Description									
<i>enable</i>	Enable DNS database settings on the GUI.									
<i>disable</i>	Disable DNS database settings on the GUI.									
gui-dnsfilter	Enable/disable DNS Filtering on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS Filtering on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable DNS Filtering on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable DNS Filtering on the GUI.	<i>disable</i>	Disable DNS Filtering on the GUI.			
Option	Description									
<i>enable</i>	Enable DNS Filtering on the GUI.									
<i>disable</i>	Disable DNS Filtering on the GUI.									
gui-dos-policy	Enable/disable DoS policies on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DoS policies on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable DoS policies on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable DoS policies on the GUI.	<i>disable</i>	Disable DoS policies on the GUI.			
Option	Description									
<i>enable</i>	Enable DoS policies on the GUI.									
<i>disable</i>	Disable DoS policies on the GUI.									
gui-dynamic-routing	Enable/disable dynamic routing on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable dynamic routing on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable dynamic routing on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable dynamic routing on the GUI.	<i>disable</i>	Disable dynamic routing on the GUI.			
Option	Description									
<i>enable</i>	Enable dynamic routing on the GUI.									
<i>disable</i>	Disable dynamic routing on the GUI.									
gui-email-collection	Enable/disable email collection on the GUI.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable email collection on the GUI.		
	<i>disable</i>	Disable email collection on the GUI.		
gui-endpoint-control	Enable/disable endpoint control on the GUI.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable endpoint control on the GUI.		
	<i>disable</i>	Disable endpoint control on the GUI.		
gui-endpoint-control-advanced	Enable/disable advanced endpoint control options on the GUI.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable advanced endpoint control options on the GUI.		
	<i>disable</i>	Disable advanced endpoint control options on the GUI.		
gui-enforce-change-summary	Enforce change summaries for select tables in the GUI.	option	-	require
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	No change summary requirement.		
	<i>require</i>	Change summary required.		
	<i>optional</i>	Change summary optional.		
gui-explicit-proxy	Enable/disable the explicit proxy on the GUI.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable the explicit proxy on the GUI.		
	<i>disable</i>	Disable the explicit proxy on the GUI.		
gui-file-filter	Enable/disable File-filter on the GUI.	option	-	enable **
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable File-filter on the GUI.		
	<i>disable</i>	Disable File-filter on the GUI.		

Parameter	Description	Type	Size	Default						
gui-fortiap-split-tunneling	Enable/disable FortiAP split tunneling on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiAP split tunneling on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable FortiAP split tunneling on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiAP split tunneling on the GUI.	<i>disable</i>	Disable FortiAP split tunneling on the GUI.			
Option	Description									
<i>enable</i>	Enable FortiAP split tunneling on the GUI.									
<i>disable</i>	Disable FortiAP split tunneling on the GUI.									
gui-fortitender-controller	Enable/disable FortiExtender on the GUI.	option	-	disable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiExtender on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable FortiExtender on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiExtender on the GUI.	<i>disable</i>	Disable FortiExtender on the GUI.			
Option	Description									
<i>enable</i>	Enable FortiExtender on the GUI.									
<i>disable</i>	Disable FortiExtender on the GUI.									
gui-icap	Enable/disable ICAP on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ICAP on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable ICAP on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable ICAP on the GUI.	<i>disable</i>	Disable ICAP on the GUI.			
Option	Description									
<i>enable</i>	Enable ICAP on the GUI.									
<i>disable</i>	Disable ICAP on the GUI.									
gui-implicit-policy	Enable/disable implicit firewall policies on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable implicit firewall policies on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable implicit firewall policies on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable implicit firewall policies on the GUI.	<i>disable</i>	Disable implicit firewall policies on the GUI.			
Option	Description									
<i>enable</i>	Enable implicit firewall policies on the GUI.									
<i>disable</i>	Disable implicit firewall policies on the GUI.									
gui-ips	Enable/disable IPS on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPS on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable IPS on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPS on the GUI.	<i>disable</i>	Disable IPS on the GUI.			
Option	Description									
<i>enable</i>	Enable IPS on the GUI.									
<i>disable</i>	Disable IPS on the GUI.									
gui-load-balance	Enable/disable server load balancing on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server load balancing on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable server load balancing on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable server load balancing on the GUI.	<i>disable</i>	Disable server load balancing on the GUI.			
Option	Description									
<i>enable</i>	Enable server load balancing on the GUI.									
<i>disable</i>	Disable server load balancing on the GUI.									

Parameter	Description	Type	Size	Default						
gui-local-in-policy	Enable/disable Local-In policies on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Local-In policies on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Local-In policies on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Local-In policies on the GUI.	<i>disable</i>	Disable Local-In policies on the GUI.			
Option	Description									
<i>enable</i>	Enable Local-In policies on the GUI.									
<i>disable</i>	Disable Local-In policies on the GUI.									
gui-multicast-policy	Enable/disable multicast firewall policies on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable multicast firewall policies on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable multicast firewall policies on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable multicast firewall policies on the GUI.	<i>disable</i>	Disable multicast firewall policies on the GUI.			
Option	Description									
<i>enable</i>	Enable multicast firewall policies on the GUI.									
<i>disable</i>	Disable multicast firewall policies on the GUI.									
gui-multiple-interface-policy	Enable/disable adding multiple interfaces to a policy on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable adding multiple interfaces to a policy on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable adding multiple interfaces to a policy on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable adding multiple interfaces to a policy on the GUI.	<i>disable</i>	Disable adding multiple interfaces to a policy on the GUI.			
Option	Description									
<i>enable</i>	Enable adding multiple interfaces to a policy on the GUI.									
<i>disable</i>	Disable adding multiple interfaces to a policy on the GUI.									
gui-object-colors	Enable/disable object colors on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable object colors on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable object colors on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable object colors on the GUI.	<i>disable</i>	Disable object colors on the GUI.			
Option	Description									
<i>enable</i>	Enable object colors on the GUI.									
<i>disable</i>	Disable object colors on the GUI.									
gui-ot	Enable/disable Operational technology features on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Operational technology features on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Operational technology features on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Operational technology features on the GUI.	<i>disable</i>	Disable Operational technology features on the GUI.			
Option	Description									
<i>enable</i>	Enable Operational technology features on the GUI.									
<i>disable</i>	Disable Operational technology features on the GUI.									
gui-policy-based-ipsec	Enable/disable policy-based IPsec VPN on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable policy-based IPsec VPN on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable policy-based IPsec VPN on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable policy-based IPsec VPN on the GUI.	<i>disable</i>	Disable policy-based IPsec VPN on the GUI.			
Option	Description									
<i>enable</i>	Enable policy-based IPsec VPN on the GUI.									
<i>disable</i>	Disable policy-based IPsec VPN on the GUI.									

Parameter	Description	Type	Size	Default						
gui-policy-disclaimer	Enable/disable policy disclaimer on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable policy disclaimer on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable policy disclaimer on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable policy disclaimer on the GUI.	<i>disable</i>	Disable policy disclaimer on the GUI.			
Option	Description									
<i>enable</i>	Enable policy disclaimer on the GUI.									
<i>disable</i>	Disable policy disclaimer on the GUI.									
gui-proxy-inspection	Enable/disable the proxy features on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the proxy features on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable the proxy features on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable the proxy features on the GUI.	<i>disable</i>	Disable the proxy features on the GUI.			
Option	Description									
<i>enable</i>	Enable the proxy features on the GUI.									
<i>disable</i>	Disable the proxy features on the GUI.									
gui-security-profile-group	Enable/disable Security Profile Groups on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Security Profile Groups on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Security Profile Groups on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Security Profile Groups on the GUI.	<i>disable</i>	Disable Security Profile Groups on the GUI.			
Option	Description									
<i>enable</i>	Enable Security Profile Groups on the GUI.									
<i>disable</i>	Disable Security Profile Groups on the GUI.									
gui-spamfilter	Enable/disable Antispam on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Antispam on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Antispam on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Antispam on the GUI.	<i>disable</i>	Disable Antispam on the GUI.			
Option	Description									
<i>enable</i>	Enable Antispam on the GUI.									
<i>disable</i>	Disable Antispam on the GUI.									
gui-sslvpn-personal-bookmarks	Enable/disable SSL-VPN personal bookmark management on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN personal bookmark management on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-VPN personal bookmark management on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN personal bookmark management on the GUI.	<i>disable</i>	Disable SSL-VPN personal bookmark management on the GUI.			
Option	Description									
<i>enable</i>	Enable SSL-VPN personal bookmark management on the GUI.									
<i>disable</i>	Disable SSL-VPN personal bookmark management on the GUI.									
gui-sslvpn-realms	Enable/disable SSL-VPN realms on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN realms on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-VPN realms on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN realms on the GUI.	<i>disable</i>	Disable SSL-VPN realms on the GUI.			
Option	Description									
<i>enable</i>	Enable SSL-VPN realms on the GUI.									
<i>disable</i>	Disable SSL-VPN realms on the GUI.									

Parameter	Description	Type	Size	Default						
gui-switch-controller *	Enable/disable the switch controller on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the switch controller on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable the switch controller on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable the switch controller on the GUI.	<i>disable</i>	Disable the switch controller on the GUI.			
Option	Description									
<i>enable</i>	Enable the switch controller on the GUI.									
<i>disable</i>	Disable the switch controller on the GUI.									
gui-threat-weight	Enable/disable threat weight on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable threat weight on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable threat weight on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable threat weight on the GUI.	<i>disable</i>	Disable threat weight on the GUI.			
Option	Description									
<i>enable</i>	Enable threat weight on the GUI.									
<i>disable</i>	Disable threat weight on the GUI.									
gui-traffic-shaping	Enable/disable traffic shaping on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable traffic shaping on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable traffic shaping on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable traffic shaping on the GUI.	<i>disable</i>	Disable traffic shaping on the GUI.			
Option	Description									
<i>enable</i>	Enable traffic shaping on the GUI.									
<i>disable</i>	Disable traffic shaping on the GUI.									
gui-videofilter	Enable/disable Video filtering on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Video filtering on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Video filtering on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Video filtering on the GUI.	<i>disable</i>	Disable Video filtering on the GUI.			
Option	Description									
<i>enable</i>	Enable Video filtering on the GUI.									
<i>disable</i>	Disable Video filtering on the GUI.									
gui-voip-profile	Enable/disable VoIP profiles on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VoIP profiles on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable VoIP profiles on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable VoIP profiles on the GUI.	<i>disable</i>	Disable VoIP profiles on the GUI.			
Option	Description									
<i>enable</i>	Enable VoIP profiles on the GUI.									
<i>disable</i>	Disable VoIP profiles on the GUI.									
gui-vpn	Enable/disable VPN tunnels on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VPN tunnels on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable VPN tunnels on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable VPN tunnels on the GUI.	<i>disable</i>	Disable VPN tunnels on the GUI.			
Option	Description									
<i>enable</i>	Enable VPN tunnels on the GUI.									
<i>disable</i>	Disable VPN tunnels on the GUI.									
gui-waf-profile	Enable/disable Web Application Firewall on the GUI.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Web Application Firewall on the GUI.		
	<i>disable</i>	Disable Web Application Firewall on the GUI.		
gui-wan-load-balancing	Enable/disable SD-WAN on the GUI.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable SD-WAN on the GUI.		
	<i>disable</i>	Disable SD-WAN on the GUI.		
gui-wanopt-cache *	Enable/disable WAN Optimization and Web Caching on the GUI.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WAN Optimization and Web Caching on the GUI.		
	<i>disable</i>	Disable WAN Optimization and Web Caching on the GUI.		
gui-webfilter	Enable/disable Web filtering on the GUI.	option	-	enable **
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Web filtering on the GUI.		
	<i>disable</i>	Disable Web filtering on the GUI.		
gui-webfilter-advanced	Enable/disable advanced web filtering on the GUI.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable advanced web filtering on the GUI.		
	<i>disable</i>	Disable advanced web filtering on the GUI.		
gui-wireless-controller	Enable/disable the wireless controller on the GUI.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable the wireless controller on the GUI.		
	<i>disable</i>	Disable the wireless controller on the GUI.		
gui-ztna	Enable/disable Zero Trust Network Access features on the GUI.	option	-	enable **

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Zero Trust Network Access features on the GUI.		
	<i>disable</i>	Disable Zero Trust Network Access features on the GUI.		
h323-direct-model	Enable/disable H323 direct model.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable H323 direct model.		
	<i>enable</i>	Enable H323 direct model.		
http-external-dest	Offload HTTP traffic to FortiWeb or FortiCache.	option	-	fortiweb
	<b>Option</b>	<b>Description</b>		
	<i>fortiweb</i>	Offload HTTP traffic to FortiWeb for Web Application Firewall inspection.		
	<i>forticache</i>	Offload HTTP traffic to FortiCache for external web caching and WAN optimization.		
ike-dn-format	Configure IKE ASN.1 Distinguished Name format conventions.	option	-	with-space
	<b>Option</b>	<b>Description</b>		
	<i>with-space</i>	Format IKE ASN.1 Distinguished Names with spaces between attribute names and values.		
	<i>no-space</i>	Format IKE ASN.1 Distinguished Names without spaces between attribute names and values.		
ike-policy-route	Enable/disable IKE Policy Based Routing (PBR).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IKE Policy Based Routing (PBR).		
	<i>disable</i>	Disable IKE Policy Based Routing (PBR).		
ike-port	UDP port for IKE/IPsec traffic.	integer	Minimum value: 1024 Maximum value: 65535	500
ike-quick-crash-detect	Enable/disable IKE quick crash detection (RFC 6290).	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IKE quick crash detection (RFC 6290).		
	<i>disable</i>	Disable IKE quick crash detection (RFC 6290).		
ike-session-resume	Enable/disable IKEv2 session resumption (RFC 5723).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IKEv2 session resumption (RFC 5723).		
	<i>disable</i>	Disable IKEv2 session resumption (RFC 5723).		
internet-service-database-cache	Enable/disable Internet Service database caching.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable Internet Service database caching.		
	<i>enable</i>	Enable Internet Service database caching.		
ip	IP address and netmask.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0
ip6	IPv6 address prefix for NAT mode.	ipv6-prefix	Not Specified	::/0
lan-extension-controller-addr	Controller IP address or FQDN to connect.	string	Maximum length: 255	
link-down-access	Enable/disable link down access traffic.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Allow link down access traffic.		
	<i>disable</i>	Block link down access traffic.		
lldp-reception	Enable/disable Link Layer Discovery Protocol (LLDP) reception for this VDOM or apply global settings to this VDOM.	option	-	global
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable LLDP reception for this VDOM.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable LLDP reception for this VDOM.		
	<i>global</i>	Use the global LLDP reception configuration for this VDOM.		
lldp-transmission	Enable/disable Link Layer Discovery Protocol (LLDP) transmission for this VDOM or apply global settings to this VDOM.	option	-	global
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable LLDP transmission for this VDOM.		
	<i>disable</i>	Disable LLDP transmission for this VDOM.		
	<i>global</i>	Use the global LLDP transmission configuration for this VDOM.		
location-id	Local location ID in the form of an IPv4 address.	ipv4-address	Not Specified	0.0.0.0
mac-ttl	Duration of MAC addresses in Transparent mode.	integer	Minimum value: 300 Maximum value: 8640000	300
manageip	Transparent mode IPv4 management IP address and netmask.	user	Not Specified	
manageip6	Transparent mode IPv6 management IP address and netmask.	ipv6-prefix	Not Specified	::/0
multicast-forward	Enable/disable multicast forwarding.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable multicast forwarding.		
	<i>disable</i>	Disable multicast forwarding.		
multicast-skip-policy	Enable/disable allowing multicast traffic through the FortiGate without a policy check.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Allowing multicast traffic through the FortiGate without creating a multicast firewall policy.		
	<i>disable</i>	Require a multicast policy to allow multicast traffic to pass through the FortiGate.		

Parameter	Description	Type	Size	Default						
multicast-ttl-notchange	Enable/disable preventing the FortiGate from changing the TTL for forwarded multicast packets.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>The multicast TTL is not changed.</td></tr><tr><td><i>disable</i></td><td>The multicast TTL may be changed.</td></tr></table>	Option	Description	<i>enable</i>	The multicast TTL is not changed.	<i>disable</i>	The multicast TTL may be changed.			
Option	Description									
<i>enable</i>	The multicast TTL is not changed.									
<i>disable</i>	The multicast TTL may be changed.									
nat46-force-ipv4-packet-forwarding	Enable/disable mandatory IPv4 packet forwarding in NAT46.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.</td></tr><tr><td><i>disable</i></td><td>Disable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.</td></tr></table>	Option	Description	<i>enable</i>	Enable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.	<i>disable</i>	Disable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.			
Option	Description									
<i>enable</i>	Enable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.									
<i>disable</i>	Disable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.									
nat46-generate-ipv6-fragment-header	Enable/disable NAT46 IPv6 fragment header generation.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NAT46 IPv6 fragment header generation.</td></tr><tr><td><i>disable</i></td><td>Disable NAT46 IPv6 fragment header generation.</td></tr></table>	Option	Description	<i>enable</i>	Enable NAT46 IPv6 fragment header generation.	<i>disable</i>	Disable NAT46 IPv6 fragment header generation.			
Option	Description									
<i>enable</i>	Enable NAT46 IPv6 fragment header generation.									
<i>disable</i>	Disable NAT46 IPv6 fragment header generation.									
nat64-force-ipv6-packet-forwarding	Enable/disable mandatory IPv6 packet forwarding in NAT64.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mandatory IPv6 packet forwarding</td></tr><tr><td><i>disable</i></td><td>Disable mandatory IPv6 packet forwarding</td></tr></table>	Option	Description	<i>enable</i>	Enable mandatory IPv6 packet forwarding	<i>disable</i>	Disable mandatory IPv6 packet forwarding			
Option	Description									
<i>enable</i>	Enable mandatory IPv6 packet forwarding									
<i>disable</i>	Disable mandatory IPv6 packet forwarding									
ngfw-mode	Next Generation Firewall (NGFW) mode.	option	-	profile-based						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>profile-based</i></td><td>Application and web-filtering are configured using profiles applied to policy entries.</td></tr><tr><td><i>policy-based</i></td><td>Application and web-filtering are configured as policy match conditions.</td></tr></table>	Option	Description	<i>profile-based</i>	Application and web-filtering are configured using profiles applied to policy entries.	<i>policy-based</i>	Application and web-filtering are configured as policy match conditions.			
Option	Description									
<i>profile-based</i>	Application and web-filtering are configured using profiles applied to policy entries.									
<i>policy-based</i>	Application and web-filtering are configured as policy match conditions.									
opmode	Firewall operation mode (NAT or Transparent).	option	-	nat						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>nat</i></td><td>Change to NAT mode.</td></tr><tr><td><i>transparent</i></td><td>Change to transparent mode.</td></tr></table>	Option	Description	<i>nat</i>	Change to NAT mode.	<i>transparent</i>	Change to transparent mode.			
	Option	Description								
	<i>nat</i>	Change to NAT mode.								
<i>transparent</i>	Change to transparent mode.									
policy-offload-level *	Configure firewall policy offload level.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable policy offloading.</td></tr><tr><td><i>dos-offload</i></td><td>Only enable DoS policy offloading.</td></tr></table>	Option	Description	<i>disable</i>	Disable policy offloading.	<i>dos-offload</i>	Only enable DoS policy offloading.			
	Option	Description								
	<i>disable</i>	Disable policy offloading.								
<i>dos-offload</i>	Only enable DoS policy offloading.									
prp-trailer-action	Enable/disable action to take on PRP trailer.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Try to keep PRP trailer.</td></tr><tr><td><i>disable</i></td><td>Trim PRP trailer.</td></tr></table>	Option	Description	<i>enable</i>	Try to keep PRP trailer.	<i>disable</i>	Trim PRP trailer.			
	Option	Description								
	<i>enable</i>	Try to keep PRP trailer.								
<i>disable</i>	Trim PRP trailer.									
sccp-port	TCP port the SCCP proxy monitors for SCCP traffic.	integer	Minimum value: 0 Maximum value: 65535	2000						
sctp-session-without-init	Enable/disable Sctp session creation without Sctp INIT.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Sctp session creation without Sctp INIT.</td></tr><tr><td><i>disable</i></td><td>Disable Sctp session creation without Sctp INIT.</td></tr></table>	Option	Description	<i>enable</i>	Enable Sctp session creation without Sctp INIT.	<i>disable</i>	Disable Sctp session creation without Sctp INIT.			
	Option	Description								
	<i>enable</i>	Enable Sctp session creation without Sctp INIT.								
<i>disable</i>	Disable Sctp session creation without Sctp INIT.									
ses-denied-traffic	Enable/disable including denied session in the session table.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Include denied sessions in the session table.</td></tr><tr><td><i>disable</i></td><td>Do not add denied sessions to the session table.</td></tr></table>	Option	Description	<i>enable</i>	Include denied sessions in the session table.	<i>disable</i>	Do not add denied sessions to the session table.			
	Option	Description								
	<i>enable</i>	Include denied sessions in the session table.								
<i>disable</i>	Do not add denied sessions to the session table.									
sip-expectation	Enable/disable the SIP kernel session helper to create an expectation for port 5060.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Allow SIP session helper to create an expectation for port 5060.		
	<i>disable</i>	Prevent SIP session helper from creating an expectation for port 5060.		
sip-nat-trace	Enable/disable recording the original SIP source IP address when NAT is used.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Record the original SIP source IP address when NAT is used.		
	<i>disable</i>	Do not record the original SIP source IP address when NAT is used.		
sip-ssl-port *	TCP port the SIP proxy monitors for SIP SSL/TLS traffic.	integer	Minimum value: 0 Maximum value: 65535	5061
sip-tcp-port	TCP port the SIP proxy monitors for SIP traffic.	integer	Minimum value: 1 Maximum value: 65535	5060
sip-udp-port	UDP port the SIP proxy monitors for SIP traffic.	integer	Minimum value: 1 Maximum value: 65535	5060
snat-hairpin-traffic	Enable/disable source NAT (SNAT) for hairpin traffic.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable SNAT for hairpin traffic.		
	<i>disable</i>	Disable SNAT for hairpin traffic.		
status	Enable/disable this VDOM.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable this VDOM.		
	<i>disable</i>	Disable this VDOM.		
strict-src-check	Enable/disable strict source verification.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable strict source verification.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable strict source verification.		
tcp-session-without-syn	Enable/disable allowing TCP session without SYN flags.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Allow TCP session without SYN flags.		
	<i>disable</i>	Do not allow TCP session without SYN flags.		
utf8-spam-tagging	Enable/disable converting antispam tags to UTF-8 for better non-ASCII character support.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Convert antispam tags to UTF-8.		
	<i>disable</i>	Do not convert antispam tags.		
v4-ecmp-mode	IPv4 Equal-cost multi-path (ECMP) routing and load balancing mode.	option	-	source-ip-based
	<b>Option</b>	<b>Description</b>		
	<i>source-ip-based</i>	Select next hop based on source IP.		
	<i>weight-based</i>	Select next hop based on weight.		
	<i>usage-based</i>	Select next hop based on usage.		
	<i>source-dest-ip-based</i>	Select next hop based on both source and destination IPs.		
vdom-type	Vdom type (traffic, lan-extension or admin).	option	-	traffic
	<b>Option</b>	<b>Description</b>		
	<i>traffic</i>	Change to traffic VDOM		
	<i>lan-extension</i>	Change to lan-extension VDOM		
	<i>admin</i>	Change to admin VDOM		
vpn-stats-log	Enable/disable periodic VPN log statistics for one or more types of VPN. Separate names with a space.	option	-	ipsec pptp l2tp ssl
	<b>Option</b>	<b>Description</b>		
	<i>ipsec</i>	IPsec.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>pptp</i>	PPTP.		
	<i>l2tp</i>	L2TP.		
	<i>ssl</i>	SSL.		
vpn-stats-period	Period to send VPN log statistics.	integer	Minimum value: 0 Maximum value: 4294967295	600
wccp-cache-engine	Enable/disable WCCP cache engine.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WCCP cache engine.		
	<i>disable</i>	Disable WCCP cache engine.		

\* This parameter may not exist in some models.

\*\* Values may differ between models.

## config system sflow

Configure sFlow.

```
config system sflow
  Description: Configure sFlow.
  set collector-ip {ipv4-address}
  set collector-port {integer}
  set interface {string}
  set interface-select-method [auto|sdwan|...]
  set source-ip {ipv4-address}
end
```

## config system sflow

Parameter	Description	Type	Size	Default
collector-ip	IP address of the sFlow collector that sFlow agents added to interfaces in this VDOM send sFlow datagrams to.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default								
collector-port	UDP port number used for sending sFlow datagrams.	integer	Minimum value: 0 Maximum value: 65535	6343								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.
	Option	Description										
	auto	Set outgoing interface automatically.										
	sdwan	Set outgoing interface by SD-WAN or policy routing rules.										
specify	Set outgoing interface manually.											
source-ip	Source IP address for sFlow agent.	ipv4-address	Not Specified	0.0.0.0								

## config system sit-tunnel

Configure IPv6 tunnel over IPv4.

```

config system sit-tunnel
    Description: Configure IPv6 tunnel over IPv4.
    edit <name>
        set auto-asic-offload [enable|disable]
        set destination {ipv4-address}
        set interface {string}
        set ip6 {ipv6-prefix}
        set source {ipv4-address}
        set use-sdwan [disable|enable]
    next
end

```

## config system sit-tunnel

Parameter	Description	Type	Size	Default						
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auto ASIC offloading.</td></tr><tr><td><i>disable</i></td><td>Disable ASIC offloading.</td></tr></table>				Option	Description	<i>enable</i>	Enable auto ASIC offloading.	<i>disable</i>	Disable ASIC offloading.
Option	Description									
<i>enable</i>	Enable auto ASIC offloading.									
<i>disable</i>	Disable ASIC offloading.									

Parameter	Description	Type	Size	Default						
destination	Destination IP address of the tunnel.	ipv4-address	Not Specified	0.0.0.0						
interface	Interface name.	string	Maximum length: 15							
ip6	IPv6 address of the tunnel.	ipv6-prefix	Not Specified	::/0						
name	Tunnel name.	string	Maximum length: 15							
source	Source IP address of the tunnel.	ipv4-address	Not Specified	0.0.0.0						
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of SD-WAN to reach remote gateway.</td></tr><tr><td><i>enable</i></td><td>Enable use of SD-WAN to reach remote gateway.</td></tr></table>				Option	Description	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.	<i>enable</i>	Enable use of SD-WAN to reach remote gateway.
Option	Description									
<i>disable</i>	Disable use of SD-WAN to reach remote gateway.									
<i>enable</i>	Enable use of SD-WAN to reach remote gateway.									

\* This parameter may not exist in some models.

### Configure SMC NTP information.

```
config system smc-ntp
  Description: Configure SMC NTP information.
  set channel {integer}
  config ntpserver
    Description: Configure the FortiGate SMC to connect to an NTP server.
    edit <id>
      set server {ipv4-address}
    next
  end
  set ntpsync [enable|disable]
  set syncinterval {integer}
end
```

## config system smc-ntp

Parameter	Description	Type	Size	Default						
channel	SMC NTP client will send NTP packets through this channel.	integer	Minimum value: 1 Maximum value: 65535	5						
ntpsync	Enable/disable setting the FortiGate SMC system time by synchronizing with an NTP server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable synchronization with NTP server in SMC.</td></tr><tr><td>disable</td><td>Disable synchronization with NTP server in SMC.</td></tr></table>				Option	Description	enable	Enable synchronization with NTP server in SMC.	disable	Disable synchronization with NTP server in SMC.
Option	Description									
enable	Enable synchronization with NTP server in SMC.									
disable	Disable synchronization with NTP server in SMC.									
syncinterval	SMC NTP synchronization interval.	integer	Minimum value: 1 Maximum value: 65535	60						

## config ntpserver

Parameter	Description	Type	Size	Default
id	NTP server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server	IP address of the NTP server.	ipv4-address	Not Specified	0.0.0.0

## config system sms-server

Configure SMS server for sending SMS messages to support user authentication.

```
config system sms-server
    Description: Configure SMS server for sending SMS messages to support user authentication.
    edit <name>
        set mail-server {string}
    next
end
```

## config system sms-server

Parameter	Description	Type	Size	Default
mail-server	Email-to-SMS server domain name.	string	Maximum length: 63	
name	Name of SMS server.	string	Maximum length: 35	

## config system snmp community

SNMP community configuration.

```
config system snmp community
  Description: SNMP community configuration.
  edit <id>
    set events {option1}, {option2}, ...
    config hosts
      Description: Configure IPv4 SNMP managers (hosts).
      edit <id>
        set source-ip {ipv4-address}
        set ip {user}
        set ha-direct [enable|disable]
        set host-type [any|query|...]
      next
    end
  config hosts6
    Description: Configure IPv6 SNMP managers.
    edit <id>
      set source-ipv6 {ipv6-address}
      set ipv6 {ipv6-prefix}
      set ha-direct [enable|disable]
      set host-type [any|query|...]
    next
  end
  set mib-view {string}
  set name {string}
  set query-v1-port {integer}
  set query-v1-status [enable|disable]
  set query-v2c-port {integer}
  set query-v2c-status [enable|disable]
  set status [enable|disable]
  set trap-v1-lport {integer}
  set trap-v1-rport {integer}
  set trap-v1-status [enable|disable]
  set trap-v2c-lport {integer}
  set trap-v2c-rport {integer}
  set trap-v2c-status [enable|disable]
  set vdoms <name1>, <name2>, ...
next
end
```

Parameter	Description	Type	Size	Default
-----------	-------------	------	------	---------

Option	Description
<i>cpu-high</i>	Send a trap when CPU usage is high.
<i>mem-low</i>	Send a trap when available memory is low.
<i>log-full</i>	Send a trap when log disk space becomes low.
<i>intf-ip</i>	Send a trap when an interface IP address is changed.
<i>vpn-tun-up</i>	Send a trap when a VPN tunnel comes up.
<i>vpn-tun-down</i>	Send a trap when a VPN tunnel goes down.
<i>ha-switch</i>	Send a trap after an HA failover when the backup unit has taken over.
<i>ha-hb-failure</i>	Send a trap when HA heartbeats are not received.
<i>ips-signature</i>	Send a trap when IPS detects an attack.
<i>ips-anomaly</i>	Send a trap when IPS finds an anomaly.
<i>av-virus</i>	Send a trap when AntiVirus finds a virus.
<i>av-oversize</i>	Send a trap when AntiVirus finds an oversized file.
<i>av-pattern</i>	Send a trap when AntiVirus finds file matching pattern.
<i>av-fragmented</i>	Send a trap when AntiVirus finds a fragmented file.
<i>fm-if-change</i>	Send a trap when FortiManager interface changes. Send a FortiManager trap.
<i>fm-conf-change</i>	Send a trap when a configuration change is made by a FortiGate administrator and the FortiGate is managed by FortiManager.
<i>bgp-established</i>	Send a trap when a BGP FSM transitions to the established state.
<i>bgp-backward-transition</i>	Send a trap when a BGP FSM goes from a high numbered state to a lower numbered state.
<i>ha-member-up</i>	Send a trap when an HA cluster member goes up.
<i>ha-member-down</i>	Send a trap when an HA cluster member goes down.
<i>ent-conf-change</i>	Send a trap when an entity MIB change occurs (RFC4133).
<i>av-conserve</i>	Send a trap when the FortiGate enters conserve mode.
<i>av-bypass</i>	Send a trap when the FortiGate enters bypass mode.
<i>av-oversize-passed</i>	Send a trap when AntiVirus passes an oversized file.
<i>av-oversize-blocked</i>	Send a trap when AntiVirus blocks an oversized file.

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>ips-pkg-update</i>	Send a trap when the IPS signature database or engine is updated.		
	<i>ips-fail-open</i>	Send a trap when the IPS network buffer is full.		
	<i>temperature-high</i>	Send a trap when a temperature sensor registers a temperature that is too high.		
	<i>voltage-alert</i>	Send a trap when a voltage sensor registers a voltage that is outside of the normal range.		
	<i>power-supply-failure</i>	Send a trap when a power supply fails.		
	<i>faz-disconnect</i>	Send a trap when a FortiAnalyzer disconnects from the FortiGate.		
	<i>fan-failure</i>	Send a trap when a fan fails.		
	<i>wc-ap-up</i>	Send a trap when a managed FortiAP comes up.		
	<i>wc-ap-down</i>	Send a trap when a managed FortiAP goes down.		
	<i>fswctl-session-up</i>	Send a trap when a FortiSwitch controller session comes up.		
	<i>fswctl-session-down</i>	Send a trap when a FortiSwitch controller session goes down.		
	<i>load-balance-real-server-down</i>	Send a trap when a server load balance real server goes down.		
	<i>device-new</i>	Send a trap when a new device is found.		
	<i>per-cpu-high</i>	Send a trap when per-CPU usage is high.		
	<i>dhcp</i>	Send a trap when the DHCP server exhausts the IP pool, an IP address already is in use, or a DHCP client interface received a DHCP-NAK.		
<i>pool-usage</i>	Send a trap about ippool usage.			
<i>ospf-nbr-state-change</i>	Send a trap when there has been a change in the state of a non-virtual OSPF neighbor.			
<i>ospf-virtnbr-state-change</i>	Send a trap when there has been a change in the state of an OSPF virtual neighbor.

## config hosts

Parameter	Description	Type	Size	Default
id	Host entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
source-ip	Source IPv4 address for SNMP traps.	ipv4-address	Not Specified	0.0.0.0
ip	IPv4 address of the SNMP manager (host).	user	Not Specified	
ha-direct	Enable/disable direct management of HA cluster members.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable setting.		
host-type	Control whether the SNMP manager sends SNMP queries, receives SNMP traps, or both. No traps will be sent when IP type is subnet.	option	-	any
	<b>Option</b>	<b>Description</b>		
	<i>any</i>	Accept queries from and send traps to this SNMP manager.		
	<i>query</i>	Accept queries from this SNMP manager but do not send traps.		
	<i>trap</i>	Send traps to this SNMP manager but do not accept SNMP queries from this SNMP manager.		

## config hosts6

Parameter	Description	Type	Size	Default
id	Host6 entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
source-ipv6	Source IPv6 address for SNMP traps.	ipv6-address	Not Specified	::
ipv6	SNMP manager IPv6 address prefix.	ipv6-prefix	Not Specified	::/0
ha-direct	Enable/disable direct management of HA cluster members.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
host-type	Control whether the SNMP manager sends SNMP queries, receives SNMP traps, or both.	option	-	any
	<b>Option</b>	<b>Description</b>		
	<i>any</i>	Accept queries from and send traps to this SNMP manager.		
	<i>query</i>	Accept queries from this SNMP manager but do not send traps.		
	<i>trap</i>	Send traps to this SNMP manager but do not accept SNMP queries from this SNMP manager.

## config system speed-test-schedule

Speed test schedule for each interface.

```
config system speed-test-schedule
  Description: Speed test schedule for each interface.
  edit <interface>
    set diffserv {user}
    set dynamic-server [disable|enable]
    set mode [UDP|TCP|...]
    set schedules <name1>, <name2>, ...
    set server-name {string}
    set status [disable|enable]
    set update-inbandwidth [disable|enable]
    set update-inbandwidth-maximum {integer}
    set update-inbandwidth-minimum {integer}
```

```

set update-outbandwidth [disable|enable]
set update-outbandwidth-maximum {integer}
set update-outbandwidth-minimum {integer}
next
end

```

## config system speed-test-schedule

Parameter	Description	Type	Size	Default
diffserv	DSCP used for speed test.	user	Not Specified	
dynamic-server	Enable/disable dynamic server option.	option	-	disable
	Option	Description		
	disable	Disable dynamic server.		
	enable	Enable dynamic server.The speed test server will be found automatically.		
interface	Interface name.	string	Maximum length: 35	
mode	Protocol Auto, TCP or UDP used for speed test.	option	-	Auto
	Option	Description		
	UDP	Protocol UDP for speed test.		
	TCP	Protocol TCP for speed test.		
	Auto	Dynamically selects TCP or UDP based on the speed test setting		
schedules <name>	Schedules for the interface. Name of a firewall recurring schedule.	string	Maximum length: 31	
server-name	Speed test server name.	string	Maximum length: 35	
status	Enable/disable scheduled speed test.	option	-	enable
	Option	Description		
	disable	Disable scheduled speed test.		
	enable	Enable scheduled speed test.		
update-inbandwidth	Enable/disable bypassing interface's inbound bandwidth setting.	option	-	disable
	Option	Description		
	disable	Honor interface's inbandwidth shaping.		
	enable	Ignore interface's inbandwidth shaping.		

Parameter	Description	Type	Size	Default						
update-inbandwidth-maximum	Maximum downloading bandwidth (kbps) to be used in a speed test.	integer	Minimum value: 0 Maximum value: 16776000	0						
update-inbandwidth-minimum	Minimum downloading bandwidth (kbps) to be considered effective.	integer	Minimum value: 0 Maximum value: 16776000	0						
update-outbandwidth	Enable/disable bypassing interface's outbound bandwidth setting.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Honor interface's outbound bandwidth shaping.</td></tr><tr><td><i>enable</i></td><td>Ignore updating interface's outbound bandwidth shaping.</td></tr></table>				Option	Description	<i>disable</i>	Honor interface's outbound bandwidth shaping.	<i>enable</i>	Ignore updating interface's outbound bandwidth shaping.
Option	Description									
<i>disable</i>	Honor interface's outbound bandwidth shaping.									
<i>enable</i>	Ignore updating interface's outbound bandwidth shaping.									
update-outbandwidth-maximum	Maximum uploading bandwidth (kbps) to be used in a speed test.	integer	Minimum value: 0 Maximum value: 16776000	0						
update-outbandwidth-minimum	Minimum uploading bandwidth (kbps) to be considered effective.	integer	Minimum value: 0 Maximum value: 16776000	0						

## config system speed-test-server

The `config system speed-test-server` command is read-only. Administrators cannot configure custom servers.

Configure speed test server list.

```
config system speed-test-server
  Description: Configure speed test server list.
  edit <name>
    config host
      Description: Hosts of the server.
      edit <id>
        set ip {ipv4-address}
        set port {integer}
        set user {string}
```

```

        set password {password}
        set longitude {string}
        set latitude {string}
        set distance {integer}
    next
end
    set timestamp {integer}
next
end

```

## config system speed-test-server

Parameter	Description	Type	Size	Default
name	Speed test server name.	string	Maximum length: 35	
timestamp	Speed test server timestamp.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config host

Parameter	Description	Type	Size	Default
id	Server host ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ip	Server host IPv4 address.	ipv4-address	Not Specified	0.0.0.0
port	Server host port number to communicate with client.	integer	Minimum value: 1 Maximum value: 65535	5204
user	Speed test host user name.	string	Maximum length: 64	
password	Speed test host password.	password	Not Specified	
longitude	Speed test host longitude.	string	Maximum length: 7	
latitude	Speed test host latitude.	string	Maximum length: 7	

Parameter	Description	Type	Size	Default
distance	Speed test host distance.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config system speed-test-setting

Configure speed test setting.

```
config system speed-test-setting
    Description: Configure speed test setting.
    set latency-threshold {integer}
    set multiple-tcp-stream {integer}
end
```

## config system speed-test-setting

Parameter	Description	Type	Size	Default
latency-threshold	Speed test latency threshold in milliseconds for the Auto mode. If the latency exceeds this threshold, the speed test will use the UDP protocol; otherwise, it will use the TCP protocol.	integer	Minimum value: 0 Maximum value: 2000	60
multiple-tcp-stream	Number of parallel client streams for the TCP protocol to run during the speed test.	integer	Minimum value: 1 Maximum value: 64	4

## config system sso-admin

Configure SSO admin users.

```
config system sso-admin
    Description: Configure SSO admin users.
    edit <name>
        set accprofile {string}
        set vdom <name1>, <name2>, ...
    next
end
```

## config system sso-admin

Parameter	Description	Type	Size	Default
accprofile	SSO admin user access profile.	string	Maximum length: 35	
name	SSO admin name.	string	Maximum length: 64	
vdom <name>	Virtual domain(s) that the administrator can access. Virtual domain name.	string	Maximum length: 79	

## config system sso-forticloud-admin

Configure FortiCloud SSO admin users.

```
config system sso-forticloud-admin
  Description: Configure FortiCloud SSO admin users.
  edit <name>
    set accprofile {string}
    set vdom <name1>, <name2>, ...
  next
end
```

## config system sso-forticloud-admin

Parameter	Description	Type	Size	Default
accprofile	FortiCloud SSO admin user access profile.	string	Maximum length: 35	
name	FortiCloud SSO admin name.	string	Maximum length: 64	
vdom <name>	Virtual domain(s) that the administrator can access. Virtual domain name.	string	Maximum length: 79	

## config system sso-fortigate-cloud-admin

Configure FortiCloud SSO admin users.

```
config system sso-fortigate-cloud-admin
  Description: Configure FortiCloud SSO admin users.
  edit <name>
    set accprofile {string}
    set vdom <name1>, <name2>, ...
  next
end
```

## config system sso-fortigate-cloud-admin

Parameter	Description	Type	Size	Default
accprofile	FortiCloud SSO admin user access profile.	string	Maximum length: 35	
name	FortiCloud SSO admin name.	string	Maximum length: 64	
vdom <name>	Virtual domain(s) that the administrator can access. Virtual domain name.	string	Maximum length: 79	

## config system standalone-cluster

Configure FortiGate Session Life Support Protocol (FGSP) cluster attributes.

```
config system standalone-cluster
    Description: Configure FortiGate Session Life Support Protocol (FGSP) cluster
attributes.
    config cluster-peer
        Description: Configure FortiGate Session Life Support Protocol (FGSP) session
synchronization.
        edit <sync-id>
            set peervd {string}
            set peerip {ipv4-address}
            set syncvd <name1>, <name2>, ...
            set down-intfs-before-sess-sync <name1>, <name2>, ...
            set hb-interval {integer}
            set hb-lost-threshold {integer}
            set ipsec-tunnel-sync [enable|disable]
            set secondary-add-ipsec-routes [enable|disable]
            config session-sync-filter
                Description: Add one or more filters if you only want to synchronize some
sessions. Use the filter to configure the types of sessions to synchronize.
                set srcintf {string}
                set dstintf {string}
                set srcaddr {ipv4-classnet-any}
                set dstaddr {ipv4-classnet-any}
                set srcaddr6 {ipv6-network}
                set dstaddr6 {ipv6-network}
                config custom-service
                    Description: Only sessions using these custom services are synchronized.
Use source and destination port ranges to define these custom services.
                    edit <id>
                        set src-port-range {user}
                        set dst-port-range {user}
                    next
                end
            end
        next
    end
    set encryption [enable|disable]
    set group-member-id {integer}
```

```

set layer2-connection [available|unavailable]
set psksecret {password-3}
set session-sync-dev {user}
set standalone-group-id {integer}
end

```

## config system standalone-cluster

Parameter	Description	Type	Size	Default						
encryption	Enable/disable encryption when synchronizing sessions.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable encryption when synchronizing sessions.</td></tr><tr><td><i>disable</i></td><td>Disable encryption when synchronizing sessions.</td></tr></table>	Option	Description	<i>enable</i>	Enable encryption when synchronizing sessions.	<i>disable</i>	Disable encryption when synchronizing sessions.			
Option	Description									
<i>enable</i>	Enable encryption when synchronizing sessions.									
<i>disable</i>	Disable encryption when synchronizing sessions.									
group-member-id	Cluster member ID.	integer	Minimum value: 0 Maximum value: 15	0						
layer2-connection	Indicate whether layer 2 connections are present among FGSP members.	option	-	unavailable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>available</i></td><td>There exist layer 2 connections among FGSP members.</td></tr><tr><td><i>unavailable</i></td><td>There does not exist layer 2 connection among FGSP members.</td></tr></table>	Option	Description	<i>available</i>	There exist layer 2 connections among FGSP members.	<i>unavailable</i>	There does not exist layer 2 connection among FGSP members.			
Option	Description									
<i>available</i>	There exist layer 2 connections among FGSP members.									
<i>unavailable</i>	There does not exist layer 2 connection among FGSP members.									
psksecret	Pre-shared secret for session synchronization (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
session-sync-dev	Offload session-sync process to kernel and sync sessions using connected interface(s) directly.	user	Not Specified							
standalone-group-id	Cluster group ID. Must be the same for all members.	integer	Minimum value: 0 Maximum value: 255	0						

## config cluster-peer

Parameter	Description	Type	Size	Default						
sync-id	Sync ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
peervd	VDOM that contains the session synchronization link interface on the peer unit. Usually both peers would have the same peervd.	string	Maximum length: 31	root						
peerip	IP address of the interface on the peer unit that is used for the session synchronization link.	ipv4-address	Not Specified	0.0.0.0						
syncvd <name>	Sessions from these VDOMs are synchronized using this session synchronization configuration. VDOM name.	string	Maximum length: 79							
down-intfs-before-sess-sync <name>	List of interfaces to be turned down before session synchronization is complete. Interface name.	string	Maximum length: 79							
hb-interval	Heartbeat interval. Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 20	2						
hb-lost-threshold	Lost heartbeat threshold. Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 60	10						
ipsec-tunnel-sync	Enable/disable IPsec tunnel synchronization.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IPsec tunnel synchronization.</td></tr><tr><td>disable</td><td>Disable IPsec tunnel synchronization.</td></tr></table>				Option	Description	enable	Enable IPsec tunnel synchronization.	disable	Disable IPsec tunnel synchronization.
Option	Description									
enable	Enable IPsec tunnel synchronization.									
disable	Disable IPsec tunnel synchronization.									
secondary-add-ipsec-routes	Enable/disable IKE route announcement on the backup unit.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Add IKE routes to the backup unit.</td></tr><tr><td>disable</td><td>Do not add IKE routes to the backup unit.</td></tr></table>				Option	Description	enable	Add IKE routes to the backup unit.	disable	Do not add IKE routes to the backup unit.
Option	Description									
enable	Add IKE routes to the backup unit.									
disable	Do not add IKE routes to the backup unit.									

## config session-sync-filter

Parameter	Description	Type	Size	Default
srcintf	Only sessions from this interface are synchronized.	string	Maximum length: 15	
dstintf	Only sessions to this interface are synchronized.	string	Maximum length: 15	
srcaddr	Only sessions from this IPv4 address are synchronized.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
dstaddr	Only sessions to this IPv4 address are synchronized.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
srcaddr6	Only sessions from this IPv6 address are synchronized.	ipv6-network	Not Specified	::/0
dstaddr6	Only sessions to this IPv6 address are synchronized.	ipv6-network	Not Specified	::/0

## config custom-service

Parameter	Description	Type	Size	Default
id	Custom service ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
src-port-range	Custom service source port range.	user	Not Specified	0-0
dst-port-range	Custom service destination port range.	user	Not Specified	0-0

## config system storage

Configure logical storage.

```
config system storage
  Description: Configure logical storage.
  edit <name>
    set device {string}
    set media-status [enable|disable|...]
    set order {integer}
    set partition {string}
    set size {integer}
    set status [enable|disable]
    set usage [log|wanopt]
    set wanopt-mode [mix|wanopt|...]
```

```

next
end

```

## config system storage

Parameter	Description	Type	Size	Default
device	Partition device.	string	Maximum length: 19	?
media-status	The physical status of current media.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Storage is enabled.		
	<i>disable</i>	Storage is disabled.		
	<i>fail</i>	Storage have some fail sector.		
name	Storage name.	string	Maximum length: 35	default_n
order	Set storage order.	integer	Minimum value: 0 Maximum value: 255	0
partition	Label of underlying partition.	string	Maximum length: 16	<unknown>
size	Partition size.	integer	Minimum value: 0 Maximum value: 4294967295	0
status	Enable/disable storage.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
usage	Use hard disk for logging or WAN Optimization.	option	-	log
	<b>Option</b>	<b>Description</b>		
	<i>log</i>	Use hard disk for logging.		
	<i>wanopt</i>	Use hard disk for WAN Optimization.		
wanopt-mode *	WAN Optimization mode.	option	-	mix

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>mix</i>	Use hard disk for WAN Optimization mix mode.		
	<i>wanopt</i>	Use hard disk for WAN Optimization wanopt mode.		
	<i>webcache</i>	Use hard disk for WAN Optimization webcache mode.		

\* This parameter may not exist in some models.

## config system stp

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1800F, FortiGate 1801F, FortiGate 200F, FortiGate 201F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 1500DT, FortiGate 1500D, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 800D, FortiGate 900D, FortiGate VM64.

### Configure Spanning Tree Protocol (STP).

```
config system stp
    Description: Configure Spanning Tree Protocol (STP).
    set forward-delay {integer}
    set hello-time {integer}
    set max-age {integer}
    set max-hops {integer}
    set switch-priority [0|4096|...]
end
```

## config system stp

Parameter	Description	Type	Size	Default
forward-delay	Forward delay.	integer	Minimum value: 4 Maximum value: 30	15
hello-time	Hello time.	integer	Minimum value: 1 Maximum value: 10	2
max-age	Maximum packet age.	integer	Minimum value: 6 Maximum value: 40	20
max-hops	Maximum number of hops.	integer	Minimum value: 1 Maximum value: 40	20
switch-priority	STP switch priority; the lower the number the higher the priority (select from 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, and 57344).	option	-	32768

Option	Description
0	0
4096	4096
8192	8192
12288	12288
16384	16384
20480	20480
24576	24576
28672	28672
32768	32768
36864	36864
40960	40960
45056	45056
49152	49152

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	53248	53248		
	57344	57344		

## config system switch-interface

Configure software switch interfaces by grouping physical and WiFi interfaces.

```
config system switch-interface
    Description: Configure software switch interfaces by grouping physical and WiFi
    interfaces.
    edit <name>
        set intra-switch-policy [implicit|explicit]
        set mac-ttl {integer}
        set member <interface-name1>, <interface-name2>, ...
        set span [disable|enable]
        set span-dest-port {string}
        set span-direction [rx|tx|...]
        set span-source-port <interface-name1>, <interface-name2>, ...
        set type [switch|hub]
        set vdom {string}
    next
end
```

## config system switch-interface

Parameter	Description	Type	Size	Default
intra-switch-policy	Allow any traffic between switch interfaces or require firewall policies to allow traffic between switch interfaces.	option	-	implicit
	<b>Option</b>	<b>Description</b>		
	<i>implicit</i>	Traffic between switch members is implicitly allowed.		
	<i>explicit</i>	Traffic between switch members must match firewall policies.		
mac-ttl	Duration for which MAC addresses are held in the ARP table.	integer	Minimum value: 300 Maximum value: 8640000	300
member <interface-name>	Names of the interfaces that belong to the virtual switch. Physical interface name.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default								
name	Interface name (name cannot be in use by any other interfaces, VLANs, or inter-VDOM links).	string	Maximum length: 15									
span	Enable/disable port spanning. Port spanning echoes traffic received by the software switch to the span destination port.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable port spanning.</td></tr><tr><td><i>enable</i></td><td>Enable port spanning.</td></tr></table>				Option	Description	<i>disable</i>	Disable port spanning.	<i>enable</i>	Enable port spanning.		
Option	Description											
<i>disable</i>	Disable port spanning.											
<i>enable</i>	Enable port spanning.											
span-dest-port	SPAN destination port name. All traffic on the SPAN source ports is echoed to the SPAN destination port.	string	Maximum length: 15									
span-direction	The direction in which the SPAN port operates, either: rx, tx, or both.	option	-	both								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rx</i></td><td>Copies only received packets from source SPAN ports to the destination SPAN port.</td></tr><tr><td><i>tx</i></td><td>Copies only transmitted packets from source SPAN ports to the destination SPAN port.</td></tr><tr><td><i>both</i></td><td>Copies both received and transmitted packets from source SPAN ports to the destination SPAN port.</td></tr></table>				Option	Description	<i>rx</i>	Copies only received packets from source SPAN ports to the destination SPAN port.	<i>tx</i>	Copies only transmitted packets from source SPAN ports to the destination SPAN port.	<i>both</i>	Copies both received and transmitted packets from source SPAN ports to the destination SPAN port.
Option	Description											
<i>rx</i>	Copies only received packets from source SPAN ports to the destination SPAN port.											
<i>tx</i>	Copies only transmitted packets from source SPAN ports to the destination SPAN port.											
<i>both</i>	Copies both received and transmitted packets from source SPAN ports to the destination SPAN port.											
span-source-port <interface-name>	Physical interface name. Port spanning echoes all traffic on the SPAN source ports to the SPAN destination port. Physical interface name.	string	Maximum length: 79									
type	Type of switch based on functionality: switch for normal functionality, or hub to duplicate packets to all port members.	option	-	switch								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>switch</i></td><td>Switch for normal switch functionality (available in NAT mode only).</td></tr><tr><td><i>hub</i></td><td>Hub to duplicate packets to all member ports.</td></tr></table>				Option	Description	<i>switch</i>	Switch for normal switch functionality (available in NAT mode only).	<i>hub</i>	Hub to duplicate packets to all member ports.		
Option	Description											
<i>switch</i>	Switch for normal switch functionality (available in NAT mode only).											
<i>hub</i>	Hub to duplicate packets to all member ports.											
vdom	VDOM that the software switch belongs to.	string	Maximum length: 31									

## config system tos-based-priority

Configure Type of Service (ToS) based priority table to set network traffic priorities.

```

config system tos-based-priority
    Description: Configure Type of Service (ToS) based priority table to set network traffic
    priorities.
    edit <id>
        set priority [low|medium|...]
        set tos {integer}
    next
end

```

## config system tos-based-priority

Parameter	Description	Type	Size	Default
id	Item ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
priority	ToS based priority level to low, medium or high.	option	-	high
	<div><div>Option</div><div>Description</div></div>			
	low	Low priority.		
	medium	Medium priority.		
	high	High priority.		
tos	Value of the ToS byte in the IP datagram header.	integer	Minimum value: 0 Maximum value: 15	0

## config system vdom-dns

Configure DNS servers for a non-management VDOM.

```

config system vdom-dns
    Description: Configure DNS servers for a non-management VDOM.
    set alt-primary {ipv4-address}
    set alt-secondary {ipv4-address}
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set ip6-primary {ipv6-address}
    set ip6-secondary {ipv6-address}
    set primary {ipv4-address}
    set protocol {option1}, {option2}, ...
    set secondary {ipv4-address}
    set server-hostname <hostname1>, <hostname2>, ...
    set server-select-method [least-rtt|failover]
    set source-ip {ipv4-address}
    set ssl-certificate {string}

```

```

set vdom-dns [enable|disable]
end

```

## config system vdom-dns

Parameter	Description	Type	Size	Default
alt-primary	Alternate primary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0
alt-secondary	Alternate secondary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	auto	Set outgoing interface automatically.		
	sdwan	Set outgoing interface by SD-WAN or policy routing rules.		
	specify	Set outgoing interface manually.		
ip6-primary	Primary IPv6 DNS server IP address for the VDOM.	ipv6-address	Not Specified	::
ip6-secondary	Secondary IPv6 DNS server IP address for the VDOM.	ipv6-address	Not Specified	::
primary	Primary DNS server IP address for the VDOM.	ipv4-address	Not Specified	0.0.0.0
protocol	DNS transport protocols.	option	-	cleartext
	Option	Description		
	cleartext	DNS over UDP/53, DNS over TCP/53.		
	dot	DNS over TLS/853.		
	doh	DNS over HTTPS/443.		
secondary	Secondary DNS server IP address for the VDOM.	ipv4-address	Not Specified	0.0.0.0
server-hostname <hostname>	DNS server host name list. DNS server host name list separated by space (maximum 4 domains).	string	Maximum length: 127	
server-select-method	Specify how configured servers are prioritized.	option	-	least-rtt

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>least-rtt</i>	Select servers based on least round trip time.		
	<i>failover</i>	Select servers based on the order they are configured.		
source-ip	Source IP for communications with the DNS server.	ipv4-address	Not Specified	0.0.0.0
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_Factory
vdom-dns	Enable/disable configuring DNS servers for the current VDOM.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable configuring DNS servers for the current VDOM.		
	<i>disable</i>	Disable configuring DNS servers for the current VDOM.		

## config system vdom-exception

Global configuration objects that can be configured independently across different ha peers for all VDOMs or for the defined VDOM scope.

```
config system vdom-exception
    Description: Global configuration objects that can be configured independently across
different ha peers for all VDOMs or for the defined VDOM scope.
    edit <id>
        set object [log.fortianalyzer.setting|log.fortianalyzer.override-setting|...]
        set scope [all|inclusive|...]
        set vdom <name1>, <name2>, ...
    next
end
```

## config system vdom-exception

Parameter	Description	Type	Size	Default
id	Index.	integer	Minimum value: 0 1 Maximum value: 4096	0
object	Name of the configuration object that can be configured independently for all VDOMs.	option	-	

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>log.fortianalyzer.setting</i>	log.fortianalyzer.setting		
	<i>log.fortianalyzer.override-setting</i>	log.fortianalyzer.override-setting

scope	Determine whether the configuration object can be configured separately for all VDOMs or if some VDOMs share the same configuration.	option	-	all

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>all</i>	Object configuration independent for all VDOMs.		
	<i>inclusive</i>	Object configuration independent for the listed VDOMs. Other VDOMs use the global configuration.		
	<i>exclusive</i>	Use the global object configuration for the listed VDOMs. Other VDOMs can be configured independently.		
vdom <name>	Names of the VDOMs. VDOM name.	string	Maximum length: 79	

## config system vdom-link

Configure VDOM links.

```
config system vdom-link
  Description: Configure VDOM links.
  edit <name>
    set type [ppp|ethernet|...]
    set vcluster [vcluster1|vcluster2]
  next
end
```

## config system vdom-link

Parameter	Description	Type	Size	Default
name	VDOM link name (maximum = 11 characters).	string	Maximum length: 11	
type	VDOM link type: PPP or Ethernet.	option	-	ppp
	<b>Option</b>	<b>Description</b>		
	<i>ppp</i>	PPP VDOM link.		
	<i>ethernet</i>	Ethernet VDOM link.		
	<i>npupair</i>	NPU VDOM link.		
vcluster	Virtual cluster.	option	-	vcluster1
	<b>Option</b>	<b>Description</b>		
	<i>vcluster1</i>	Virtual cluster 1.		
	<i>vcluster2</i>	Virtual cluster 2.		

## config system vdom-netflow

Configure NetFlow per VDOM.

```
config system vdom-netflow
  Description: Configure NetFlow per VDOM.
  set collector-ip {string}
  set collector-port {integer}
  set interface {string}
  set interface-select-method [auto|sdwan|...]
  set source-ip {string}
  set vdom-netflow [enable|disable]
end
```

## config system vdom-netflow

Parameter	Description	Type	Size	Default								
collector-ip	NetFlow collector IP address.	string	Maximum length: 63									
collector-port	NetFlow collector port number.	integer	Minimum value: 0 Maximum value: 65535	2055								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
source-ip	Source IP address for communication with the NetFlow agent.	string	Maximum length: 63									
vdom-netflow	Enable/disable NetFlow per VDOM.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NetFlow per VDOM.</td></tr><tr><td><i>disable</i></td><td>Disable NetFlow per VDOM.</td></tr></table>				Option	Description	<i>enable</i>	Enable NetFlow per VDOM.	<i>disable</i>	Disable NetFlow per VDOM.		
Option	Description											
<i>enable</i>	Enable NetFlow per VDOM.											
<i>disable</i>	Disable NetFlow per VDOM.											

## config system vdom-property

Configure VDOM property.

```
config system vdom-property
  Description: Configure VDOM property.
  edit <name>
    set custom-service {user}
    set description {string}
    set dialup-tunnel {user}
    set firewall-address {user}
    set firewall-addrgrp {user}
    set firewall-policy {user}
    set ipsec-phase1 {user}
    set ipsec-phase1-interface {user}
    set ipsec-phase2 {user}
    set ipsec-phase2-interface {user}
    set log-disk-quota {user}
    set onetime-schedule {user}
    set proxy {user}
    set recurring-schedule {user}
    set service-group {user}
    set session {user}
    set snmp-index {integer}
    set sslvpn {user}
    set user {user}
    set user-group {user}
  next
end
```

## config system vdom-property

Parameter	Description	Type	Size	Default
custom-service	Maximum guaranteed number of firewall custom services.	user	Not Specified	
description	Description.	string	Maximum length: 127	
dialup-tunnel	Maximum guaranteed number of dial-up tunnels.	user	Not Specified	
firewall-address	Maximum guaranteed number of firewall addresses (IPv4, IPv6, multicast).	user	Not Specified	
firewall-addrgrp	Maximum guaranteed number of firewall address groups (IPv4, IPv6).	user	Not Specified	
firewall-policy	Maximum guaranteed number of firewall policies (policy, DoS-policy4, DoS-policy6, multicast).	user	Not Specified	
ipsec-phase1	Maximum guaranteed number of VPN IPsec phase 1 tunnels.	user	Not Specified	

Parameter	Description	Type	Size	Default
ipsec-phase1-interface	Maximum guaranteed number of VPN IPsec phase1 interface tunnels.	user	Not Specified	
ipsec-phase2	Maximum guaranteed number of VPN IPsec phase 2 tunnels.	user	Not Specified	
ipsec-phase2-interface	Maximum guaranteed number of VPN IPsec phase2 interface tunnels.	user	Not Specified	
log-disk-quota	Log disk quota in megabytes (MB). Range depends on how much disk space is available.	user	Not Specified	
name	VDOM name.	string	Maximum length: 31	
onetime-schedule	Maximum guaranteed number of firewall one-time schedules.	user	Not Specified	
proxy	Maximum guaranteed number of concurrent proxy users.	user	Not Specified	
recurring-schedule	Maximum guaranteed number of firewall recurring schedules.	user	Not Specified	
service-group	Maximum guaranteed number of firewall service groups.	user	Not Specified	
session	Maximum guaranteed number of sessions.	user	Not Specified	
snmp-index	Permanent SNMP Index of the virtual domain.	integer	Minimum value: 1 Maximum value: 2147483647	0
sslvpn	Maximum guaranteed number of SSL-VPNs.	user	Not Specified	
user	Maximum guaranteed number of local users.	user	Not Specified	
user-group	Maximum guaranteed number of user groups.	user	Not Specified	

## config system vdom-radius-server

Configure a RADIUS server to use as a RADIUS Single Sign On (RSSO) server for this VDOM.

```
config system vdom-radius-server
    Description: Configure a RADIUS server to use as a RADIUS Single Sign On (RSSO) server
for this VDOM.
    edit <name>
        set radius-server-vdom {string}
        set status [enable|disable]
    next
end
```

## config system vdom-radius-server

Parameter	Description	Type	Size	Default
name	Name of the VDOM that you are adding the RADIUS server to.	string	Maximum length: 31	
radius-server-vdom	Use this option to select another VDOM containing a VDOM RSSO RADIUS server to use for the current VDOM.	string	Maximum length: 31	
status	Enable/disable the RSSO RADIUS server for this VDOM.	option	-	disable
		Option	Description	
		enable	Enable the RSSO RADIUS server for this VDOM.	
		disable	Disable the RSSO RADIUS server for this VDOM.	

## config system vdom-sflow

Configure sFlow per VDOM to add or change the IP address and UDP port that FortiGate sFlow agents in this VDOM use to send sFlow datagrams to an sFlow collector.

```
config system vdom-sflow
    Description: Configure sFlow per VDOM to add or change the IP address and UDP port that
FortiGate sFlow agents in this VDOM use to send sFlow datagrams to an sFlow collector.
    set collector-ip {ipv4-address}
    set collector-port {integer}
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set source-ip {ipv4-address}
    set vdom-sflow [enable|disable]
end
```

## config system vdom-sflow

Parameter	Description	Type	Size	Default
collector-ip	IP address of the sFlow collector that sFlow agents added to interfaces in this VDOM send sFlow datagrams to.	ipv4-address	Not Specified	0.0.0.0
collector-port	UDP port number used for sending sFlow datagrams.	integer	Minimum value: 0 Maximum value: 65535	6343

Parameter	Description	Type	Size	Default
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
source-ip	Source IP address for sFlow agent.	ipv4-address	Not Specified	0.0.0.0
vdom-sflow	Enable/disable the sFlow configuration for the current VDOM.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable sFlow for this VDOM.		
	<i>disable</i>	Disable sFlow for this VDOM.		

## config system vdom

Configure virtual domain.

```
config system vdom
  Description: Configure virtual domain.
  edit <name>
    set flag {integer}
    set short-name {string}
    set vcluster-id {integer}
  next
end
```

## config system vdom

Parameter	Description	Type	Size	Default
flag	Flag.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
name	VDOM name.	string	Maximum length: 31	
short-name	VDOM short name.	string	Maximum length: 11	
vcluster-id	Virtual cluster ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config system vin-alarm

This command is available for model(s): FortiGateRugged 70F 3G4G, FortiGateRugged 70F. It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGate VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure vin alarm settings.

```
config system vin-alarm
    Description: Configure vin alarm settings.
    set psu-1-threshold-low {integer}
    set psu-2-threshold-low {integer}
    set status [enable|disable]
end
```

## config system vin-alarm

Parameter	Description	Type	Size	Default
psu-1-threshold-low	Threshold at which 1st PSU voltage drop to trigger low voltage alarm, in percent of voltage.	integer	Minimum value: 1 Maximum value: 99	60
psu-2-threshold-low	Threshold at which 2nd PSU voltage drop to trigger low voltage alarm, in percent of voltage.	integer	Minimum value: 1 Maximum value: 99	60
status	Enable/disable vin alarm.	option	-	disable
		Option	Description	
		<i>enable</i>	Enable vin alarm.	
		<i>disable</i>	Disable vin alarm.	

## config system virtual-switch

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1800F, FortiGate 1801F, FortiGate 200F, FortiGate 201F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 90E, FortiGate 91E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 1500DT, FortiGate 1500D, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 800D, FortiGate 900D, FortiGate VM64.

Configure virtual hardware switch interfaces.

```

config system virtual-switch
  Description: Configure virtual hardware switch interfaces.
  edit <name>
    set physical-switch {string}
    config port
      Description: Configure member ports.
      edit <name>
        set alias {string}
      next
    end
    set span [disable|enable]
    set span-dest-port {string}
    set span-direction [rx|tx|...]
    set span-source-port {string}
    set vlan {integer}
  next
end

```

### config system virtual-switch

Parameter	Description	Type	Size	Default								
name	Name of the virtual switch.	string	Maximum length: 15									
physical-switch	Physical switch parent.	string	Maximum length: 15									
span *	Enable/disable SPAN.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SPAN.</td></tr><tr><td><i>enable</i></td><td>Enable SPAN.</td></tr></table>				Option	Description	<i>disable</i>	Disable SPAN.	<i>enable</i>	Enable SPAN.		
Option	Description											
<i>disable</i>	Disable SPAN.											
<i>enable</i>	Enable SPAN.											
span-dest-port *	SPAN destination port.	string	Maximum length: 15									
span-direction *	SPAN direction.	option	-	both								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rx</i></td><td>SPAN receive direction only.</td></tr><tr><td><i>tx</i></td><td>SPAN transmit direction only.</td></tr><tr><td><i>both</i></td><td>SPAN both directions.</td></tr></table>				Option	Description	<i>rx</i>	SPAN receive direction only.	<i>tx</i>	SPAN transmit direction only.	<i>both</i>	SPAN both directions.
Option	Description											
<i>rx</i>	SPAN receive direction only.											
<i>tx</i>	SPAN transmit direction only.											
<i>both</i>	SPAN both directions.											
span-source-port *	SPAN source port.	string	Maximum length: 15									

Parameter	Description	Type	Size	Default
vlan *	VLAN.	integer	Minimum value: 0 Maximum value: 4294967295	0

\* This parameter may not exist in some models.

## config port

Parameter	Description	Type	Size	Default
name	Physical interface name.	string	Maximum length: 15	
alias	Alias.	string	Maximum length: 25	

## config system virtual-wire-pair

Configure virtual wire pairs.

```
config system virtual-wire-pair
    Description: Configure virtual wire pairs.
    edit <name>
        set member <interface-name1>, <interface-name2>, ...
        set outer-vlan-id <vlanid1>, <vlanid2>, ...
        set poweroff-bypass [enable|disable]
        set poweron-bypass [enable|disable]
        set vlan-filter {user}
        set wildcard-vlan [enable|disable]
    next
end
```

## config system virtual-wire-pair

Parameter	Description	Type	Size	Default
member <interface-name>	Interfaces belong to the virtual-wire-pair. Interface name.	string	Maximum length: 79	
name	Virtual-wire-pair name. Must be a unique interface name.	string	Maximum length: 11	
outer-vlan-id <vlanid> *	Outer VLAN ID. VLAN ID (1 - 4094).	integer	Minimum value: 1 Maximum value: 4094	

Parameter	Description	Type	Size	Default						
poweroff-bypass *	Enable/disable interface bypass state when power off.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable bypass when power off.</td></tr><tr><td>disable</td><td>Disable bypass when power off.</td></tr></table>				Option	Description	enable	Enable bypass when power off.	disable	Disable bypass when power off.
	Option	Description								
	enable	Enable bypass when power off.								
disable	Disable bypass when power off.									
poweron-bypass *	Enable/disable interface bypass state when power on.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable bypass when power on.</td></tr><tr><td>disable</td><td>Disable bypass when power on.</td></tr></table>				Option	Description	enable	Enable bypass when power on.	disable	Disable bypass when power on.
	Option	Description								
	enable	Enable bypass when power on.								
disable	Disable bypass when power on.									
vlan-filter	VLAN ranges to allow	user	Not Specified							
wildcard-vlan	Enable/disable wildcard VLAN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable wildcard VLAN.</td></tr><tr><td>disable</td><td>Disable wildcard VLAN.</td></tr></table>				Option	Description	enable	Enable wildcard VLAN.	disable	Disable wildcard VLAN.
	Option	Description								
	enable	Enable wildcard VLAN.								
disable	Disable wildcard VLAN.									

\* This parameter may not exist in some models.

## config system vene-tunnel

Configure virtual network enabler tunnel.

```

config system vene-tunnel
    Description: Configure virtual network enabler tunnel.
    set auto-asic-offload [enable|disable]
    set bmr-hostname {password}
    set br {string}
    set http-password {password}
    set http-username {string}
    set interface {string}
    set ipv4-address {ipv4-classnet-host}
    set mode [map-e|fixed-ip|...]
    set ssl-certificate {string}
    set status [enable|disable]
    set update-url {string}
end

```

## config system vne-tunnel

Parameter	Description	Type	Size	Default								
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auto ASIC offloading.</td></tr><tr><td><i>disable</i></td><td>Disable ASIC offloading.</td></tr></table>	Option	Description	<i>enable</i>	Enable auto ASIC offloading.	<i>disable</i>	Disable ASIC offloading.					
Option	Description											
<i>enable</i>	Enable auto ASIC offloading.											
<i>disable</i>	Disable ASIC offloading.											
bmr-hostname	BMR hostname.	password	Not Specified									
br	IPv6 address or FQDN of the border relay.	string	Maximum length: 255									
http-password	HTTP authentication password.	password	Not Specified									
http-username	HTTP authentication user name.	string	Maximum length: 64									
interface	Interface name.	string	Maximum length: 15									
ipv4-address	Tunnel IPv4 address and netmask.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0								
mode	VNE tunnel mode.	option	-	map-e								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>map-e</i></td><td>Map-e mode.</td></tr><tr><td><i>fixed-ip</i></td><td>Fixed-ip mode.</td></tr><tr><td><i>ds-lite</i></td><td>DS-Lite mode.</td></tr></table>	Option	Description	<i>map-e</i>	Map-e mode.	<i>fixed-ip</i>	Fixed-ip mode.	<i>ds-lite</i>	DS-Lite mode.			
Option	Description											
<i>map-e</i>	Map-e mode.											
<i>fixed-ip</i>	Fixed-ip mode.											
<i>ds-lite</i>	DS-Lite mode.											
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_Factory								
status	Enable/disable VNE tunnel.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VNE tunnel.</td></tr><tr><td><i>disable</i></td><td>Disable VNE tunnel.</td></tr></table>	Option	Description	<i>enable</i>	Enable VNE tunnel.	<i>disable</i>	Disable VNE tunnel.					
Option	Description											
<i>enable</i>	Enable VNE tunnel.											
<i>disable</i>	Disable VNE tunnel.											
update-url	URL of provisioning server.	string	Maximum length: 511									

\* This parameter may not exist in some models.

## config system vxlan

Configure VXLAN devices.

```
config system vxlan
  Description: Configure VXLAN devices.
  edit <name>
    set dstport {integer}
    set interface {string}
    set ip-version [ipv4-unicast|ipv6-unicast|...]
    set multicast-ttl {integer}
    set remote-ip <ip1>, <ip2>, ...
    set remote-ip6 <ip61>, <ip62>, ...
    set vni {integer}
  next
end
```

## config system vxlan

Parameter	Description	Type	Size	Default										
dstport	VXLAN destination port.	integer	Minimum value: 1 Maximum value: 65535	4789										
interface	Outgoing interface for VXLAN encapsulated traffic.	string	Maximum length: 15											
ip-version	IP version to use for the VXLAN interface and so for communication over the VXLAN. IPv4 or IPv6 unicast or multicast.	option	-	ipv4-unicast										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4-unicast</td><td>Use IPv4 unicast addressing over the VXLAN.</td></tr><tr><td>ipv6-unicast</td><td>Use IPv6 unicast addressing over the VXLAN.</td></tr><tr><td>ipv4-multicast</td><td>Use IPv4 multicast addressing over the VXLAN.</td></tr><tr><td>ipv6-multicast</td><td>Use IPv6 multicast addressing over the VXLAN.</td></tr></table>				Option	Description	ipv4-unicast	Use IPv4 unicast addressing over the VXLAN.	ipv6-unicast	Use IPv6 unicast addressing over the VXLAN.	ipv4-multicast	Use IPv4 multicast addressing over the VXLAN.	ipv6-multicast	Use IPv6 multicast addressing over the VXLAN.
Option	Description													
ipv4-unicast	Use IPv4 unicast addressing over the VXLAN.													
ipv6-unicast	Use IPv6 unicast addressing over the VXLAN.													
ipv4-multicast	Use IPv4 multicast addressing over the VXLAN.													
ipv6-multicast	Use IPv6 multicast addressing over the VXLAN.													
multicast-ttl	VXLAN multicast TTL.	integer	Minimum value: 1 Maximum value: 255	0										
name	VXLAN device or interface name. Must be a unique interface name.	string	Maximum length: 15											
remote-ip <ip>	IPv4 address of the VXLAN interface on the device at the remote end of the VXLAN.	string	Maximum length: 15											

Parameter	Description	Type	Size	Default
	IPv4 address.			
remote-ip6 <ip6>	IPv6 IP address of the VXLAN interface on the device at the remote end of the VXLAN. IPv6 address.	string	Maximum length: 45	
vni	VXLAN network ID.	integer	Minimum value: 1 Maximum value: 16777215	0

## config system wccp

Configure WCCP.

```
config system wccp
  Description: Configure WCCP.
  edit <service-id>
    set assignment-bucket-format [wccp-v2|cisco-implementation]
    set assignment-dstaddr-mask {ipv4-netmask-any}
    set assignment-method [HASH|MASK|...]
    set assignment-srcaddr-mask {ipv4-netmask-any}
    set assignment-weight {integer}
    set authentication [enable|disable]
    set cache-engine-method [GRE|L2]
    set cache-id {ipv4-address}
    set forward-method [GRE|L2|...]
    set group-address {ipv4-address-multicast}
    set password {password}
    set ports {user}
    set ports-defined [source|destination]
    set primary-hash {option1}, {option2}, ...
    set priority {integer}
    set protocol {integer}
    set return-method [GRE|L2|...]
    set router-id {ipv4-address}
    set router-list {user}
    set server-list {user}
    set server-type [forward|proxy]
    set service-type [auto|standard|...]
  next
end
```

## config system wccp

Parameter	Description	Type	Size	Default								
assignment-bucket-format	Assignment bucket format for the WCCP cache engine.	option	-	cisco-implementation								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>wccp-v2</td><td>WCCP-v2 bucket format.</td></tr><tr><td>cisco-implementation</td><td>Cisco bucket format.</td></tr></table>	Option	Description	wccp-v2	WCCP-v2 bucket format.	cisco-implementation	Cisco bucket format.					
Option	Description											
wccp-v2	WCCP-v2 bucket format.											
cisco-implementation	Cisco bucket format.											
assignment-dstaddr-mask	Assignment destination address mask.	ipv4-netmask-any	Not Specified	0.0.0.0								
assignment-method	Hash key assignment preference.	option	-	HASH								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>HASH</td><td>HASH assignment method.</td></tr><tr><td>MASK</td><td>MASK assignment method.</td></tr><tr><td>any</td><td>HASH or MASK.</td></tr></table>	Option	Description	HASH	HASH assignment method.	MASK	MASK assignment method.	any	HASH or MASK.			
Option	Description											
HASH	HASH assignment method.											
MASK	MASK assignment method.											
any	HASH or MASK.											
assignment-srcaddr-mask	Assignment source address mask.	ipv4-netmask-any	Not Specified	0.0.23.65								
assignment-weight	Assignment of hash weight/ratio for the WCCP cache engine.	integer	Minimum value: 0 Maximum value: 255	0								
authentication	Enable/disable MD5 authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable MD5 authentication.</td></tr><tr><td>disable</td><td>Disable MD5 authentication.</td></tr></table>	Option	Description	enable	Enable MD5 authentication.	disable	Disable MD5 authentication.					
Option	Description											
enable	Enable MD5 authentication.											
disable	Disable MD5 authentication.											
cache-engine-method	Method used to forward traffic to the routers or to return to the cache engine.	option	-	GRE								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>GRE</td><td>GRE encapsulation.</td></tr><tr><td>L2</td><td>L2 rewrite.</td></tr></table>	Option	Description	GRE	GRE encapsulation.	L2	L2 rewrite.					
Option	Description											
GRE	GRE encapsulation.											
L2	L2 rewrite.											

Parameter	Description	Type	Size	Default										
cache-id	IP address known to all routers. If the addresses are the same, use the default 0.0.0.0.	ipv4-address	Not Specified	0.0.0.0										
forward-method	Method used to forward traffic to the cache servers.	option	-	GRE										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>GRE</i></td><td>GRE encapsulation.</td></tr><tr><td><i>L2</i></td><td>L2 rewrite.</td></tr><tr><td><i>any</i></td><td>GRE or L2.</td></tr></table>	Option	Description	<i>GRE</i>	GRE encapsulation.	<i>L2</i>	L2 rewrite.	<i>any</i>	GRE or L2.					
Option	Description													
<i>GRE</i>	GRE encapsulation.													
<i>L2</i>	L2 rewrite.													
<i>any</i>	GRE or L2.													
group-address	IP multicast address used by the cache routers. For the FortiGate to ignore multicast WCCP traffic, use the default 0.0.0.0.	ipv4-address-multicast	Not Specified	0.0.0.0										
password	Password for MD5 authentication.	password	Not Specified											
ports	Service ports.	user	Not Specified											
ports-defined	Match method.	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>source</i></td><td>Source port match.</td></tr><tr><td><i>destination</i></td><td>Destination port match.</td></tr></table>	Option	Description	<i>source</i>	Source port match.	<i>destination</i>	Destination port match.							
Option	Description													
<i>source</i>	Source port match.													
<i>destination</i>	Destination port match.													
primary-hash	Hash method.	option	-	dst-ip										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>src-ip</i></td><td>Source IP hash.</td></tr><tr><td><i>dst-ip</i></td><td>Destination IP hash.</td></tr><tr><td><i>src-port</i></td><td>Source port hash.</td></tr><tr><td><i>dst-port</i></td><td>Destination port hash.</td></tr></table>	Option	Description	<i>src-ip</i>	Source IP hash.	<i>dst-ip</i>	Destination IP hash.	<i>src-port</i>	Source port hash.	<i>dst-port</i>	Destination port hash.			
Option	Description													
<i>src-ip</i>	Source IP hash.													
<i>dst-ip</i>	Destination IP hash.													
<i>src-port</i>	Source port hash.													
<i>dst-port</i>	Destination port hash.													
priority	Service priority.	integer	Minimum value: 0 Maximum value: 255	0										

Parameter	Description	Type	Size	Default
protocol	Service protocol.	integer	Minimum value: 0 Maximum value: 255	0
return-method	Method used to decline a redirected packet and return it to the FortiGate unit.	option	-	GRE
	OptionDescription			
	GRE	GRE encapsulation.		
	L2	L2 rewrite.		
	any	GRE or L2.		
router-id	IP address known to all cache engines. If all cache engines connect to the same FortiGate interface, use the default 0.0.0.0.	ipv4-address	Not Specified	0.0.0.0
router-list	IP addresses of one or more WCCP routers.	user	Not Specified	
server-list	IP addresses and netmasks for up to four cache servers.	user	Not Specified	
server-type	Cache server type.	option	-	forward
	OptionDescription			
	forward	Forward server.		
	proxy	Proxy server.		
service-id	Service ID.	string	Maximum length: 3	
service-type	WCCP service type used by the cache server for logical interception and redirection of traffic.	option	-	auto
	OptionDescription			
	auto	auto		
	standard	Standard service.		
	dynamic	Dynamic service.		

## config system wireless ap-status

This command is available for model(s): FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 61E, FortiWiFi 61F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 101E, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 61E, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90E, FortiGate 91E, FortiGate VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure accepted wireless AP.

```
config system wireless ap-status
    Description: Configure accepted wireless AP.
    edit <id>
        set bssid {mac-address}
        set ssid {string}
        set status [rogue|accepted|...]
    next
end
```

## config system wireless ap-status

Parameter	Description	Type	Size	Default
bssid	AP's BSSID.	mac-address	Not Specified	00:00:00:00:00:00
id	AP ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default								
ssid	AP's ssid	string	Maximum length: 32									
status	AP status.	option	-	rogue								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rogue</i></td><td>Rogue.</td></tr><tr><td><i>accepted</i></td><td>Accepted.</td></tr><tr><td><i>suppressed</i></td><td>Suppressed.</td></tr></table>				Option	Description	<i>rogue</i>	Rogue.	<i>accepted</i>	Accepted.	<i>suppressed</i>	Suppressed.
	Option	Description										
	<i>rogue</i>	Rogue.										
	<i>accepted</i>	Accepted.										
<i>suppressed</i>	Suppressed.

## config system zone

Configure zones to group two or more interfaces. When a zone is created you can configure policies for the zone instead of individual interfaces in the zone.

```
config system zone
    Description: Configure zones to group two or more interfaces. When a zone is created you
    can configure policies for the zone instead of individual interfaces in the zone.
    edit <name>
        set description {string}
        set interface <interface-name1>, <interface-name2>, ...
        set intrazone [allow|deny]
        config tagging
            Description: Config object tagging.
            edit <name>
                set category {string}
                set tags <name1>, <name2>, ...
            next
        end
    next
end
```

## config system zone

Parameter	Description	Type	Size	Default
description	Description.	string	Maximum length: 127	

Parameter	Description	Type	Size	Default						
interface <interface-name>	Add interfaces to this zone. Interfaces must not be assigned to another zone or have firewall policies defined. Select interfaces to add to the zone.	string	Maximum length: 79							
intrazone	Allow or deny traffic routing between different interfaces in the same zone.	option	-	deny						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow traffic between interfaces in the zone.</td></tr><tr><td><i>deny</i></td><td>Deny traffic between interfaces in the zone.</td></tr></table>				Option	Description	<i>allow</i>	Allow traffic between interfaces in the zone.	<i>deny</i>	Deny traffic between interfaces in the zone.
Option	Description									
<i>allow</i>	Allow traffic between interfaces in the zone.									
<i>deny</i>	Deny traffic between interfaces in the zone.									
name	Zone name.	string	Maximum length: 35							

### config tagging

Parameter	Description	Type	Size	Default
name	Tagging entry name.	string	Maximum length: 63	
category	Tag category.	string	Maximum length: 63	
tags <name>	Tags. Tag name.	string	Maximum length: 79	

## user

This section includes syntax for the following commands:

- [config user adgrp on page 1573](#)
- [config user certificate on page 1574](#)
- [config user domain-controller on page 1575](#)
- [config user exchange on page 1578](#)
- [config user fortitoken on page 1581](#)
- [config user fsso-polling on page 1582](#)
- [config user fsso on page 1584](#)
- [config user group on page 1588](#)
- [config user krb-keytab on page 1592](#)
- [config user ldap on page 1593](#)
- [config user local on page 1600](#)
- [config user nac-policy on page 1604](#)
- [config user password-policy on page 1606](#)
- [config user peer on page 1607](#)
- [config user peergrp on page 1609](#)
- [config user pop3 on page 1609](#)

### config user adgrp

Configure FSSO groups.

```
config user adgrp
  Description: Configure FSSO groups.
  edit <name>
    set connector-source {string}
    set id {integer}
    set server-name {string}
  next
end
```

## config user adgrp

Parameter	Description	Type	Size	Default
connector-source	FSSO connector source.	string	Maximum length: 35	
id	Group ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name.	string	Maximum length: 511	
server-name	FSSO agent name.	string	Maximum length: 35	

## config user certificate

Configure certificate users.

```
config user certificate
  Description: Configure certificate users.
  edit <name>
    set common-name {string}
    set id {integer}
    set issuer {string}
    set status [enable|disable]
    set type [single-certificate|trusted-issuer]
  next
end
```

## config user certificate

Parameter	Description	Type	Size	Default
common-name	Certificate common name.	string	Maximum length: 64	
id	User ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
issuer	CA certificate used for client certificate verification.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default						
name	User name.	string	Maximum length: 64							
status	Enable/disable allowing the certificate user to authenticate with the FortiGate unit.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable user.</td></tr><tr><td><i>disable</i></td><td>Disable user.</td></tr></table>	Option	Description	<i>enable</i>	Enable user.	<i>disable</i>	Disable user.			
Option	Description									
<i>enable</i>	Enable user.									
<i>disable</i>	Disable user.									
type	Type of certificate authentication method.	option	-	single-certificate						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>single-certificate</i></td><td>Single certificate.</td></tr><tr><td><i>trusted-issuer</i></td><td>Trusted CA issuer.</td></tr></table>	Option	Description	<i>single-certificate</i>	Single certificate.	<i>trusted-issuer</i>	Trusted CA issuer.			
Option	Description									
<i>single-certificate</i>	Single certificate.									
<i>trusted-issuer</i>	Trusted CA issuer.									

## config user domain-controller

Configure domain controller entries.

```
config user domain-controller
    Description: Configure domain controller entries.
    edit <name>
        set ad-mode [none|ds|...]
        set adlds-dn {string}
        set adlds-ip-address {ipv4-address}
        set adlds-ip6 {ipv6-address}
        set adlds-port {integer}
        set change-detection [enable|disable]
        set change-detection-period {integer}
        set dns-srv-lookup [enable|disable]
        set domain-name {string}
        config extra-server
            Description: Extra servers.
            edit <id>
                set ip-address {ipv4-address}
                set port {integer}
                set source-ip-address {ipv4-address}
                set source-port {integer}
            next
        end
        set hostname {string}
        set interface {string}
        set interface-select-method [auto|sdwan|...]
        set ip-address {ipv4-address}
        set ip6 {ipv6-address}
        set ldap-server <name1>, <name2>, ...
        set password {password}
```

```

        set port {integer}
        set replication-port {integer}
        set source-ip-address {ipv4-address}
        set source-ip6 {ipv6-address}
        set source-port {integer}
        set username {string}
    next
end

```

## config user domain-controller

Parameter	Description	Type	Size	Default
ad-mode	Set Active Directory mode.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	The server is not configured as an Active Directory Domain Server (AD DS).		
	<i>ds</i>	The server is configured as an Active Directory Domain Server (AD DS).		
	<i>lds</i>	The server is an Active Directory Lightweight Domain Server (AD LDS).		
adlds-dn	AD LDS distinguished name.	string	Maximum length: 255	
adlds-ip-address	AD LDS IPv4 address.	ipv4-address	Not Specified	0.0.0.0
adlds-ip6	AD LDS IPv6 address.	ipv6-address	Not Specified	::
adlds-port	Port number of AD LDS service.	integer	Minimum value: 0 Maximum value: 65535	389
change-detection	Enable/disable detection of a configuration change in the Active Directory server.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable detection of a configuration change in the Active Directory server.		
	<i>disable</i>	Disable detection of a configuration change in the Active Directory server.		
change-detection-period	Minutes to detect a configuration change in the Active Directory server.	integer	Minimum value: 5 Maximum value: 10080	60

Parameter	Description	Type	Size	Default
dns-srv-lookup	Enable/disable DNS service lookup.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable DNS service lookup.		
	<i>disable</i>	Disable DNS service lookup.		
domain-name	Domain DNS name.	string	Maximum length: 255	
hostname	Hostname of the server to connect to.	string	Maximum length: 255	
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
ip-address	Domain controller IPv4 address.	ipv4-address	Not Specified	0.0.0.0
ip6	Domain controller IPv6 address.	ipv6-address	Not Specified	::
ldap-server <name>	LDAP server name(s). LDAP server name.	string	Maximum length: 79	
name	Domain controller entry name.	string	Maximum length: 35	
password	Password for specified username.	password	Not Specified	
port	Port to be used for communication with the domain controller.	integer	Minimum value: 0 Maximum value: 65535	445

Parameter	Description	Type	Size	Default
replication-port	Port to be used for communication with the domain controller for replication service. Port number 0 indicates automatic discovery.	integer	Minimum value: 0 Maximum value: 65535	0
source-ip-address	FortiGate IPv4 address to be used for communication with the domain controller.	ipv4-address	Not Specified	0.0.0.0
source-ip6	FortiGate IPv6 address to be used for communication with the domain controller.	ipv6-address	Not Specified	::
source-port	Source port to be used for communication with the domain controller.	integer	Minimum value: 0 Maximum value: 65535	0
username	User name to sign in with. Must have proper permissions for service.	string	Maximum length: 64	

### config extra-server

Parameter	Description	Type	Size	Default
id	Server ID.	integer	Minimum value: 1 Maximum value: 100	0
ip-address	Domain controller IP address.	ipv4-address	Not Specified	0.0.0.0
port	Port to be used for communication with the domain controller.	integer	Minimum value: 0 Maximum value: 65535	445
source-ip-address	FortiGate IPv4 address to be used for communication with the domain controller.	ipv4-address	Not Specified	0.0.0.0
source-port	Source port to be used for communication with the domain controller.	integer	Minimum value: 0 Maximum value: 65535	0

### config user exchange

Configure MS Exchange server entries.

```

config user exchange
  Description: Configure MS Exchange server entries.
  edit <name>
    set auth-level [connect|call|...]
    set auth-type [spnego|ntlm|...]
    set auto-discover-kdc [enable|disable]
    set connect-protocol [rpc-over-tcp|rpc-over-http|...]
    set domain-name {string}
    set http-auth-type [basic|ntlm]
    set ip {ipv4-address-any}
    set kdc-ip <ipv41>, <ipv42>, ...
    set password {password}
    set server-name {string}
    set ssl-min-proto-version [default|SSLv3|...]
    set username {string}
  next
end

```

## config user exchange

Parameter	Description	Type	Size	Default												
auth-level	Authentication security level used for the RPC protocol layer.	option	-	privacy												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>connect</i></td><td>RPC authentication level 'connect'.</td></tr><tr><td><i>call</i></td><td>RPC authentication level 'call'.</td></tr><tr><td><i>packet</i></td><td>RPC authentication level 'packet'.</td></tr><tr><td><i>integrity</i></td><td>RPC authentication level 'integrity'.</td></tr><tr><td><i>privacy</i></td><td>RPC authentication level 'privacy'.</td></tr></table>	Option	Description	<i>connect</i>	RPC authentication level 'connect'.	<i>call</i>	RPC authentication level 'call'.	<i>packet</i>	RPC authentication level 'packet'.	<i>integrity</i>	RPC authentication level 'integrity'.	<i>privacy</i>	RPC authentication level 'privacy'.			
Option	Description															
<i>connect</i>	RPC authentication level 'connect'.															
<i>call</i>	RPC authentication level 'call'.															
<i>packet</i>	RPC authentication level 'packet'.															
<i>integrity</i>	RPC authentication level 'integrity'.															
<i>privacy</i>	RPC authentication level 'privacy'.															
auth-type	Authentication security type used for the RPC protocol layer.	option	-	kerberos												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>spnego</i></td><td>Negotiate authentication.</td></tr><tr><td><i>ntlm</i></td><td>NTLM authentication.</td></tr><tr><td><i>kerberos</i></td><td>Kerberos authentication.</td></tr></table>	Option	Description	<i>spnego</i>	Negotiate authentication.	<i>ntlm</i>	NTLM authentication.	<i>kerberos</i>	Kerberos authentication.							
Option	Description															
<i>spnego</i>	Negotiate authentication.															
<i>ntlm</i>	NTLM authentication.															
<i>kerberos</i>	Kerberos authentication.															
auto-discover-kdc	Enable/disable automatic discovery of KDC IP addresses.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic discovery of KDC IP addresses.</td></tr><tr><td><i>disable</i></td><td>Disable automatic discovery of KDC IP addresses.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic discovery of KDC IP addresses.	<i>disable</i>	Disable automatic discovery of KDC IP addresses.									
Option	Description															
<i>enable</i>	Enable automatic discovery of KDC IP addresses.															
<i>disable</i>	Disable automatic discovery of KDC IP addresses.															

Parameter	Description	Type	Size	Default
connect-protocol	Connection protocol used to connect to MS Exchange service.	option	-	rpc-over-https
	<b>Option</b>	<b>Description</b>		
	<i>rpc-over-tcp</i>	Connect using RPC-over-TCP. Use for MS Exchange 2010 and earlier versions. Supported in MS Exchange 2013.		
	<i>rpc-over-http</i>	Connect using RPC-over-HTTP. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.		
	<i>rpc-over-https</i>	Connect using RPC-over-HTTPS. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.		
domain-name	MS Exchange server fully qualified domain name.	string	Maximum length: 79	
http-auth-type	Authentication security type used for the HTTP transport.	option	-	ntlm
	<b>Option</b>	<b>Description</b>		
	<i>basic</i>	Basic HTTP authentication.		
	<i>ntlm</i>	NTLM HTTP authentication.		
ip	Server IPv4 address.	ipv4-address-any	Not Specified	0.0.0.0
kdc-ip <ipv4>	KDC IPv4 addresses for Kerberos authentication. KDC IPv4 addresses for Kerberos authentication.	string	Maximum length: 79	
name	MS Exchange server entry name.	string	Maximum length: 35	
password	Password for the specified username.	password	Not Specified	
server-name	MS Exchange server hostname.	string	Maximum length: 63	
ssl-min-protocol-version	Minimum SSL/TLS protocol version for HTTPS transport.	option	-	default
	<b>Option</b>	<b>Description</b>		
	<i>default</i>	Follow system global setting.		
	<i>SSLv3</i>	SSLv3.		
	<i>TLSv1</i>	TLSv1.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>TLSv1-1</i>	TLSv1.1.		
	<i>TLSv1-2</i>	TLSv1.2.		
username	User name used to sign in to the server. Must have proper permissions for service.	string	Maximum length: 64	

## config user fortitoken

Configure FortiToken.

```
config user fortitoken
    Description: Configure FortiToken.
    edit <serial-number>
        set activation-code {string}
        set activation-expire {integer}
        set comments {var-string}
        set license {string}
        set os-ver {string}
        set reg-id {string}
        set seed {string}
        set status [active|lock]
    next
end
```

## config user fortitoken

Parameter	Description	Type	Size	Default
activation-code	Mobile token user activation-code.	string	Maximum length: 32	
activation-expire	Mobile token user activation-code expire time.	integer	Minimum value: 0 Maximum value: 4294967295	0
comments	Comment.	var-string	Maximum length: 255	
license	Mobile token license.	string	Maximum length: 31	
os-ver	Device Mobile Version.	string	Maximum length: 15	
reg-id	Device Reg ID.	string	Maximum length: 256	

Parameter	Description	Type	Size	Default
seed	Token seed.	string	Maximum length: 200	
serial-number	Serial number.	string	Maximum length: 16	
status	Status.	option	-	active
	Option	Description		
	<i>active</i>	Activate FortiToken.		
	<i>lock</i>	Lock FortiToken.		

## config user fsso-polling

Configure FSSO active directory servers for polling mode.

```
config user fsso-polling
  Description: Configure FSSO active directory servers for polling mode.
  edit <id>
    config adgrp
      Description: LDAP Group Info.
      edit <name>
        next
      end
      set default-domain {string}
      set ldap-server {string}
      set logon-history {integer}
      set password {password}
      set polling-frequency {integer}
      set port {integer}
      set server {string}
      set smb-ntlmv1-auth [enable|disable]
      set smbvl [enable|disable]
      set status [enable|disable]
      set user {string}
    next
  end
```

## config user fsso-polling

Parameter	Description	Type	Size	Default
default-domain	Default domain managed by this Active Directory server.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default						
id	Active Directory server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ldap-server	LDAP server name used in LDAP connection strings.	string	Maximum length: 35							
logon-history	Number of hours of logon history to keep, 0 means keep all history.	integer	Minimum value: 0 Maximum value: 48	8						
password	Password required to log into this Active Directory server.	password	Not Specified							
polling-frequency	Polling frequency (every 1 to 30 seconds).	integer	Minimum value: 1 Maximum value: 30	10						
port	Port to communicate with this Active Directory server.	integer	Minimum value: 0 Maximum value: 65535	0						
server	Host name or IP address of the Active Directory server.	string	Maximum length: 63							
smb-ntlmv1-auth	Enable/disable support of NTLMv1 for Samba authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable support of NTLMv1 for Samba authentication.</td></tr><tr><td>disable</td><td>Disable support of NTLMv1 for Samba authentication.</td></tr></table>				Option	Description	enable	Enable support of NTLMv1 for Samba authentication.	disable	Disable support of NTLMv1 for Samba authentication.
Option	Description									
enable	Enable support of NTLMv1 for Samba authentication.									
disable	Disable support of NTLMv1 for Samba authentication.									
smbv1	Enable/disable support of SMBv1 for Samba.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable support of SMBv1 for Samba.</td></tr><tr><td>disable</td><td>Disable support of SMBv1 for Samba.</td></tr></table>				Option	Description	enable	Enable support of SMBv1 for Samba.	disable	Disable support of SMBv1 for Samba.
Option	Description									
enable	Enable support of SMBv1 for Samba.									
disable	Disable support of SMBv1 for Samba.									
status	Enable/disable polling for the status of this Active Directory server.	option	-	enable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
user	User name required to log into this Active Directory server.	string	Maximum length: 35	

## config adgrp

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 511	

## config user fsso

Configure Fortinet Single Sign On (FSSO) agents.

```
config user fsso
    Description: Configure Fortinet Single Sign On (FSSO) agents.
    edit <name>
        set group-poll-interval {integer}
        set interface {string}
        set interface-select-method [auto|sdwan|...]
        set ldap-poll [enable|disable]
        set ldap-poll-filter {string}
        set ldap-poll-interval {integer}
        set ldap-server {string}
        set logon-timeout {integer}
        set password {password}
        set password2 {password}
        set password3 {password}
        set password4 {password}
        set password5 {password}
        set port {integer}
        set port2 {integer}
        set port3 {integer}
        set port4 {integer}
        set port5 {integer}
        set server {string}
        set server2 {string}
        set server3 {string}
        set server4 {string}
        set server5 {string}
        set sni {string}
        set source-ip {ipv4-address}
        set source-ip6 {ipv6-address}
        set ssl [enable|disable]
        set ssl-server-host-ip-check [enable|disable]
```

```

        set ssl-trusted-cert {string}
        set type [default|fortinac]
        set user-info-server {string}
    next
end

```

## config user fsso

Parameter	Description	Type	Size	Default								
group-poll-interval	Interval in minutes within to fetch groups from FSSO server, or unset to disable.	integer	Minimum value: 1 Maximum value: 2880	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
ldap-poll	Enable/disable automatic fetching of groups from LDAP server.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic fetching of groups from LDAP server.</td></tr><tr><td><i>disable</i></td><td>Disable automatic fetching of groups from LDAP server.</td></tr></table>				Option	Description	<i>enable</i>	Enable automatic fetching of groups from LDAP server.	<i>disable</i>	Disable automatic fetching of groups from LDAP server.		
Option	Description											
<i>enable</i>	Enable automatic fetching of groups from LDAP server.											
<i>disable</i>	Disable automatic fetching of groups from LDAP server.											
ldap-poll-filter	Filter used to fetch groups.	string	Maximum length: 2047	(objectCategory=group)								
ldap-poll-interval	Interval in minutes within to fetch groups from LDAP server.	integer	Minimum value: 1 Maximum value: 2880	180								
ldap-server	LDAP server to get group information.	string	Maximum length: 35									
logon-timeout	Interval in minutes to keep logons after FSSO server down.	integer	Minimum value: 1 Maximum value: 2880	5								

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 35	
password	Password of the first FSSO collector agent.	password	Not Specified	
password2	Password of the second FSSO collector agent.	password	Not Specified	
password3	Password of the third FSSO collector agent.	password	Not Specified	
password4	Password of the fourth FSSO collector agent.	password	Not Specified	
password5	Password of the fifth FSSO collector agent.	password	Not Specified	
port	Port of the first FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port2	Port of the second FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port3	Port of the third FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port4	Port of the fourth FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port5	Port of the fifth FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
server	Domain name or IP address of the first FSSO collector agent.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
server2	Domain name or IP address of the second FSSO collector agent.	string	Maximum length: 63							
server3	Domain name or IP address of the third FSSO collector agent.	string	Maximum length: 63							
server4	Domain name or IP address of the fourth FSSO collector agent.	string	Maximum length: 63							
server5	Domain name or IP address of the fifth FSSO collector agent.	string	Maximum length: 63							
sni	Server Name Indication.	string	Maximum length: 255							
source-ip	Source IP for communications to FSSO agent.	ipv4-address	Not Specified	0.0.0.0						
source-ip6	IPv6 source for communications to FSSO agent.	ipv6-address	Not Specified	::						
ssl	Enable/disable use of SSL.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of SSL.</td></tr><tr><td><i>disable</i></td><td>Disable use of SSL.</td></tr></table>				Option	Description	<i>enable</i>	Enable use of SSL.	<i>disable</i>	Disable use of SSL.
Option	Description									
<i>enable</i>	Enable use of SSL.									
<i>disable</i>	Disable use of SSL.									
ssl-server-host-ip-check	Enable/disable server host/IP verification.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server host/IP verification.</td></tr><tr><td><i>disable</i></td><td>Disable server host/IP verification.</td></tr></table>				Option	Description	<i>enable</i>	Enable server host/IP verification.	<i>disable</i>	Disable server host/IP verification.
Option	Description									
<i>enable</i>	Enable server host/IP verification.									
<i>disable</i>	Disable server host/IP verification.									
ssl-trusted-cert	Trusted server certificate or CA certificate.	string	Maximum length: 79							
type	Server type.	option	-	default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>All other unspecified types of servers.</td></tr><tr><td><i>fortinac</i></td><td>FortiNAC server.</td></tr></table>				Option	Description	<i>default</i>	All other unspecified types of servers.	<i>fortinac</i>	FortiNAC server.
Option	Description									
<i>default</i>	All other unspecified types of servers.									
<i>fortinac</i>	FortiNAC server.									
user-info-server	LDAP server to get user information.	string	Maximum length: 35							

---

## config user group

Configure user groups.

```
config user group
  Description: Configure user groups.

<i>disabled</i>	Disabled.											
email	Enable/disable the guest user email address field.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>	Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.					
Option	Description											
<i>disable</i>	Disable setting.											
<i>enable</i>	Enable setting.											
expire	Time in seconds before guest user accounts expire.	integer	Minimum value: 1 Maximum value: 31536000	14400								
expire-type	Determine when the expiration countdown begins.	option	-	immediately								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>immediately</i></td><td>Immediately.</td></tr></table>	Option	Description	<i>immediately</i>	Immediately.							
Option	Description											
<i>immediately</i>	Immediately.											

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>first-successful-login</i></td><td>First successful login.</td></tr></table>	Option	Description	<i>first-successful-login</i>	First successful login.									
	Option	Description												
<i>first-successful-login</i>	First successful login.													
group-type	Set the group to be for firewall authentication, FSSO, RSSO, or guest users.	option	-	firewall										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>firewall</i></td><td>Firewall.</td></tr><tr><td><i>fsso-service</i></td><td>Fortinet Single Sign-On Service.</td></tr><tr><td><i>rsso</i></td><td>RADIUS based Single Sign-On Service.</td></tr><tr><td><i>guest</i></td><td>Guest.</td></tr></table>	Option	Description	<i>firewall</i>	Firewall.	<i>fsso-service</i>	Fortinet Single Sign-On Service.	<i>rsso</i>	RADIUS based Single Sign-On Service.	<i>guest</i>	Guest.			
	Option	Description												
	<i>firewall</i>	Firewall.												
	<i>fsso-service</i>	Fortinet Single Sign-On Service.												
	<i>rsso</i>	RADIUS based Single Sign-On Service.												
<i>guest</i>	Guest.													
http-digest-realm	Realm attribute for MD5-digest authentication.	string	Maximum length: 35											
id	Group ID.	integer	Minimum value: 0 Maximum value: 4294967295	0										
max-accounts	Maximum number of guest accounts that can be created for this group (0 means unlimited).	integer	Minimum value: 0 Maximum value: 1024 **	0										
member <name>	Names of users, peers, LDAP servers, or RADIUS servers to add to the user group. Group member name.	string	Maximum length: 511											
mobile-phone	Enable/disable the guest user mobile phone number field.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>	Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.							
	Option	Description												
	<i>disable</i>	Disable setting.												
<i>enable</i>	Enable setting.													
multiple-guest-add	Enable/disable addition of multiple guests.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>	Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.							
	Option	Description												
	<i>disable</i>	Disable setting.												
<i>enable</i>	Enable setting.													

Parameter	Description	Type	Size	Default								
name	Group name.	string	Maximum length: 35									
password	Guest user password type.	option	-	auto-generate								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto-generate</i></td><td>Automatically generate.</td></tr><tr><td><i>specify</i></td><td>Specify.</td></tr><tr><td><i>disable</i></td><td>Disable.</td></tr></table>	Option	Description	<i>auto-generate</i>	Automatically generate.	<i>specify</i>	Specify.	<i>disable</i>	Disable.			
Option	Description											
<i>auto-generate</i>	Automatically generate.											
<i>specify</i>	Specify.											
<i>disable</i>	Disable.											
sms-custom-server	SMS server.	string	Maximum length: 35									
sms-server	Send SMS through FortiGuard or other external server.	option	-	fortiguard								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortiguard</i></td><td>Send SMS by FortiGuard.</td></tr><tr><td><i>custom</i></td><td>Send SMS by custom server.</td></tr></table>	Option	Description	<i>fortiguard</i>	Send SMS by FortiGuard.	<i>custom</i>	Send SMS by custom server.					
Option	Description											
<i>fortiguard</i>	Send SMS by FortiGuard.											
<i>custom</i>	Send SMS by custom server.											
sponsor	Set the action for the sponsor guest user field.	option	-	optional								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>optional</i></td><td>Optional.</td></tr><tr><td><i>mandatory</i></td><td>Mandatory.</td></tr><tr><td><i>disabled</i></td><td>Disabled.</td></tr></table>	Option	Description	<i>optional</i>	Optional.	<i>mandatory</i>	Mandatory.	<i>disabled</i>	Disabled.			
Option	Description											
<i>optional</i>	Optional.											
<i>mandatory</i>	Mandatory.											
<i>disabled</i>	Disabled.											
sso-attribute-value	Name of the RADIUS user group that this local user group represents.	string	Maximum length: 511									
user-id	Guest user ID type.	option	-	email								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>email</i></td><td>Email address.</td></tr><tr><td><i>auto-generate</i></td><td>Automatically generate.</td></tr><tr><td><i>specify</i></td><td>Specify.</td></tr></table>	Option	Description	<i>email</i>	Email address.	<i>auto-generate</i>	Automatically generate.	<i>specify</i>	Specify.			
Option	Description											
<i>email</i>	Email address.											
<i>auto-generate</i>	Automatically generate.											
<i>specify</i>	Specify.											
user-name	Enable/disable the guest user name entry.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>	Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.					
Option	Description											
<i>disable</i>	Disable setting.											
<i>enable</i>	Enable setting.											

\*\* Values may differ between models.

## config guest

Parameter	Description	Type	Size	Default
id	Guest ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
user-id	Guest ID.	string	Maximum length: 64	
name	Guest name.	string	Maximum length: 64	
password	Guest password.	password	Not Specified	
mobile-phone	Mobile phone.	string	Maximum length: 35	
sponsor	Set the action for the sponsor guest user field.	string	Maximum length: 35	
company	Set the action for the company guest user field.	string	Maximum length: 35	
email	Email.	string	Maximum length: 64	
expiration	Expire time.	user	Not Specified	
comment	Comment.	var-string	Maximum length: 255	

## config match

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server-name	Name of remote auth server.	string	Maximum length: 35	
group-name	Name of matching user or group on remote authentication server.	string	Maximum length: 511	

## config user krb-keytab

Configure Kerberos keytab entries.

```

config user krb-keytab
    Description: Configure Kerberos keytab entries.
    edit <name>
        set keytab {string}
        set ldap-server <name1>, <name2>, ...
        set pac-data [enable|disable]
        set principal {string}
    next
end

```

## config user krb-keytab

Parameter	Description	Type	Size	Default						
keytab	Base64 coded keytab file containing a pre-shared key.	string	Maximum length: 8191							
ldap-server <name>	LDAP server name(s). LDAP server name.	string	Maximum length: 79							
name	Kerberos keytab entry name.	string	Maximum length: 35							
pac-data	Enable/disable parsing PAC data in the ticket.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable parsing PAC data in the ticket.</td></tr><tr><td><i>disable</i></td><td>Disable parsing PAC data in the ticket.</td></tr></table>				Option	Description	<i>enable</i>	Enable parsing PAC data in the ticket.	<i>disable</i>	Disable parsing PAC data in the ticket.
Option	Description									
<i>enable</i>	Enable parsing PAC data in the ticket.									
<i>disable</i>	Disable parsing PAC data in the ticket.									
principal	Kerberos service principal. For example, HTTP/myfgt.example.com@example.com.	string	Maximum length: 511							

## config user ldap

Configure LDAP server entries.

```

config user ldap
    Description: Configure LDAP server entries.
    edit <name>
        set account-key-filter {string}
        set account-key-processing [same|strip]
        set account-key-upn-san [othername|rfc822name|...]
        set antiphish [enable|disable]
        set ca-cert {string}
        set client-cert {string}
        set client-cert-auth [enable|disable]
        set cnid {string}
        set dn {string}
        set group-filter {string}
        set group-member-check [user-attr|group-object|...]
        set group-object-filter {string}
        set group-search-base {string}
    next
end

```

```

set interface {string}
set interface-select-method [auto|sdwan|...]
set member-attr {string}
set obtain-user-info [enable|disable]
set password {password}
set password-attr {string}
set password-expiry-warning [enable|disable]
set password-renewal [enable|disable]
set port {integer}
set search-type {option1}, {option2}, ...
set secondary-server {string}
set secure [disable|starttls|...]
set server {string}
set server-identity-check [enable|disable]
set source-ip {string}
set source-port {integer}
set ssl-min-proto-version [default|SSLv3|...]
set tertiary-server {string}
set two-factor [disable|fortitoken-cloud]
set two-factor-authentication [fortitoken|email|...]
set two-factor-filter {string}
set two-factor-notification [email|sms]
set type [simple|anonymous|...]
set user-info-exchange-server {string}
set username {string}

```

next

end

## config user ldap

Parameter	Description	Type	Size	Default
account-key-filter	Account key filter, using the UPN as the search filter.	string	Maximum length: 2047	(&(userPrincipalName=%s)(!(UserAccountControl:1.2.840.113556.1.4.803:=2)))
account-key-processing	Account key processing operation, either keep or strip domain string of UPN in the token.	option	-	same
		Option	Description	
		<i>same</i>	Same as UPN.	
		<i>strip</i>	Strip domain string from UPN.	

Parameter	Description	Type	Size	Default
account-key-upn-san	Define SAN in certificate for user principle name matching.	option	-	othername
	<b>Option</b>	<b>Description</b>		
	<i>othername</i>	Other name in SAN.		
	<i>rfc822name</i>	RFC822 Email address in SAN.		
	<i>dnsname</i>	DNS name in SAN.		
antiphish	Enable/disable AntiPhishing credential backend.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AntiPhishing credential backend.		
	<i>disable</i>	Disable AntiPhishing credential backend.		
ca-cert	CA certificate name.	string	Maximum length: 79	
client-cert	Client certificate name.	string	Maximum length: 79	
client-cert-auth	Enable/disable using client certificate for TLS authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable using client certificate for TLS authentication.		
	<i>disable</i>	Disable using client certificate for TLS authentication.		
cnid	Common name identifier for the LDAP server. The common name identifier for most LDAP servers is "cn".	string	Maximum length: 20	cn

Parameter	Description	Type	Size	Default								
dn	Distinguished name used to look up entries on the LDAP server.	string	Maximum length: 511									
group-filter	Filter used for group matching.	string	Maximum length: 2047									
group-member-check	Group member checking methods.	option	-	user-attr								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>user-attr</i></td><td>User attribute checking.</td></tr><tr><td><i>group-object</i></td><td>Group object checking.</td></tr><tr><td><i>posix-group-object</i></td><td>POSIX group object checking.</td></tr></table>				Option	Description	<i>user-attr</i>	User attribute checking.	<i>group-object</i>	Group object checking.	<i>posix-group-object</i>	POSIX group object checking.
Option	Description											
<i>user-attr</i>	User attribute checking.											
<i>group-object</i>	Group object checking.											
<i>posix-group-object</i>	POSIX group object checking.											
group-object-filter	Filter used for group searching.	string	Maximum length: 2047	(&(objectcategory=group)(member=*))								
group-search-base	Search base used for group searching.	string	Maximum length: 511									
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											

Parameter	Description	Type	Size	Default
member-attr	Name of attribute from which to get group membership.	string	Maximum length: 63	memberOf
name	LDAP server entry name.	string	Maximum length: 35	
obtain-user-info	Enable/disable obtaining of user information.	option	-	enable
	Option	Description		
	enable	Enable obtaining of user information.		
	disable	Disable obtaining of user information.		
password	Password for initial binding.	password	Not Specified	
password-attr	Name of attribute to get password hash.	string	Maximum length: 35	userPassword
password-expiry-warning	Enable/disable password expiry warnings.	option	-	disable
	Option	Description		
	enable	Enable password expiry warnings.		
	disable	Disable password expiry warnings.		
password-renewal	Enable/disable online password renewal.	option	-	disable
	Option	Description		
	enable	Enable online password renewal.		
	disable	Disable online password renewal.		
port	Port to be used for communication with the LDAP server.	integer	Minimum value: 1 Maximum value: 65535	389

Parameter	Description	Type	Size	Default								
search-type	Search type.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>recursive</i></td><td>Recursively retrieve the user-group chain information of a user in a particular Microsoft AD domain.</td></tr></table>	Option	Description	<i>recursive</i>	Recursively retrieve the user-group chain information of a user in a particular Microsoft AD domain.							
Option	Description											
<i>recursive</i>	Recursively retrieve the user-group chain information of a user in a particular Microsoft AD domain.											
secondary-server	Secondary LDAP server CN domain name or IP.	string	Maximum length: 63									
secure	Port to be used for authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>No SSL.</td></tr><tr><td><i>starttls</i></td><td>Use StartTLS.</td></tr><tr><td><i>ldaps</i></td><td>Use LDAPS.</td></tr></table>	Option	Description	<i>disable</i>	No SSL.	<i>starttls</i>	Use StartTLS.	<i>ldaps</i>	Use LDAPS.			
Option	Description											
<i>disable</i>	No SSL.											
<i>starttls</i>	Use StartTLS.											
<i>ldaps</i>	Use LDAPS.											
server	LDAP server CN domain name or IP.	string	Maximum length: 63									
server-identity-check	Enable/disable LDAP server identity check (verify server domain name/IP address against the server certificate).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server identity check.</td></tr><tr><td><i>disable</i></td><td>Disable server identity check.</td></tr></table>	Option	Description	<i>enable</i>	Enable server identity check.	<i>disable</i>	Disable server identity check.					
Option	Description											
<i>enable</i>	Enable server identity check.											
<i>disable</i>	Disable server identity check.											
source-ip	FortiGate IP address to be used for communication with the LDAP server.	string	Maximum length: 63									

Parameter	Description	Type	Size	Default
source-port	Source port to be used for communication with the LDAP server.	integer	Minimum value: 0 Maximum value: 65535	0
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections.	option	-	default
	Option	Description		
	default	Follow system global setting.		
	SSLv3	SSLv3.		
	TLSv1	TLSv1.		
	TLSv1-1	TLSv1.1.		
	TLSv1-2	TLSv1.2.		
tertiary-server	Tertiary LDAP server CN domain name or IP.	string	Maximum length: 63	
two-factor	Enable/disable two-factor authentication.	option	-	disable
	Option	Description		
	disable	disable two-factor authentication.		
	fortitoken-cloud	FortiToken Cloud Service.		
two-factor-authentication	Authentication method by FortiToken Cloud.	option	-	
	Option	Description		
	fortitoken	FortiToken authentication.		
	email	Email one time password.		
	sms	SMS one time password.		

Parameter	Description	Type	Size	Default								
two-factor-filter	Filter used to synchronize users to FortiToken Cloud.	string	Maximum length: 2047									
two-factor-notification	Notification method for user activation by FortiToken Cloud.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>email</td><td>Email notification for activation code.</td></tr><tr><td>sms</td><td>SMS notification for activation code.</td></tr></table>	Option	Description	email	Email notification for activation code.	sms	SMS notification for activation code.					
Option	Description											
email	Email notification for activation code.											
sms	SMS notification for activation code.											
type	Authentication type for LDAP searches.	option	-	simple								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>simple</td><td>Simple password authentication without search.</td></tr><tr><td>anonymous</td><td>Bind using anonymous user search.</td></tr><tr><td>regular</td><td>Bind using username/password and then search.</td></tr></table>	Option	Description	simple	Simple password authentication without search.	anonymous	Bind using anonymous user search.	regular	Bind using username/password and then search.			
Option	Description											
simple	Simple password authentication without search.											
anonymous	Bind using anonymous user search.											
regular	Bind using username/password and then search.											
user-info-exchange-server	MS Exchange server from which to fetch user information.	string	Maximum length: 35									
username	Username (full DN) for initial binding.	string	Maximum length: 511									

## config user local

Configure local users.

```
config user local
    Description: Configure local users.
    edit <name>
        set auth-concurrent-override [enable|disable]
        set auth-concurrent-value {integer}
        set authtimeout {integer}
        set email-to {string}
        set fortitoken {string}
        set id {integer}
```

```

set ldap-server {string}
set passwd {password}
set passwd-policy {string}
set passwd-time {user}
set ppk-identity {string}
set ppk-secret {password-3}
set radius-server {string}
set sms-custom-server {string}
set sms-phone {string}
set sms-server [fortiguard|custom]
set status [enable|disable]
set tacacs+-server {string}
set two-factor [disable|fortitoken|...]
set two-factor-authentication [fortitoken|email|...]
set two-factor-notification [email|sms]
set type [password|radius|...]
set username-sensitivity [disable|enable]
set workstation {string}

```

```

next

```

```

end

```

## config user local

Parameter	Description	Type	Size	Default
auth-concurrent-override	Enable/disable overriding the policy-auth-concurrent under config system global.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable auth-concurrent-override.		
	<i>disable</i>	Disable auth-concurrent-override.		
auth-concurrent-value	Maximum number of concurrent logins permitted from the same user.	integer	Minimum value: 0 Maximum value: 100	0
authtimeout	Time in minutes before the authentication timeout for a user is reached.	integer	Minimum value: 0 Maximum value: 1440	0
email-to	Two-factor recipient's email address.	string	Maximum length: 63	
fortitoken	Two-factor recipient's FortiToken serial number.	string	Maximum length: 16	

Parameter	Description	Type	Size	Default
id	User ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ldap-server	Name of LDAP server with which the user must authenticate.	string	Maximum length: 35	
name	Local user name.	string	Maximum length: 64	
passwd	User's password.	password	Not Specified	
passwd-policy	Password policy to apply to this user, as defined in config user password-policy.	string	Maximum length: 35	
passwd-time	Time of the last password update.	user	Not Specified	
ppk-identity	IKEv2 Postquantum Preshared Key Identity.	string	Maximum length: 35	
ppk-secret	IKEv2 Postquantum Preshared Key (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified	
radius-server	Name of RADIUS server with which the user must authenticate.	string	Maximum length: 35	
sms-custom-server	Two-factor recipient's SMS server.	string	Maximum length: 35	
sms-phone	Two-factor recipient's mobile phone number.	string	Maximum length: 15	
sms-server	Send SMS through FortiGuard or other external server.	option	-	fortiguard
	<b>Option</b> <b>Description</b>			
	<i>fortiguard</i>	Send SMS by FortiGuard.		
	<i>custom</i>	Send SMS by custom server.		
status	Enable/disable allowing the local user to authenticate with the FortiGate unit.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable user.		
	<i>disable</i>	Disable user.		
tacacs+-server	Name of TACACS+ server with which the user must authenticate.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default												
two-factor	Enable/disable two-factor authentication.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>disable</td></tr><tr><td><i>fortitoken</i></td><td>FortiToken</td></tr><tr><td><i>fortitoken-cloud</i></td><td>FortiToken Cloud Service.</td></tr><tr><td><i>email</i></td><td>Email authentication code.</td></tr><tr><td><i>sms</i></td><td>SMS authentication code.</td></tr></table>	Option	Description	<i>disable</i>	disable	<i>fortitoken</i>	FortiToken	<i>fortitoken-cloud</i>	FortiToken Cloud Service.	<i>email</i>	Email authentication code.	<i>sms</i>	SMS authentication code.			
	Option	Description														
	<i>disable</i>	disable														
	<i>fortitoken</i>	FortiToken														
	<i>fortitoken-cloud</i>	FortiToken Cloud Service.														
	<i>email</i>	Email authentication code.														
	<i>sms</i>	SMS authentication code.														
two-factor-authentication	Authentication method by FortiToken Cloud.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortitoken</i></td><td>FortiToken authentication.</td></tr><tr><td><i>email</i></td><td>Email one time password.</td></tr><tr><td><i>sms</i></td><td>SMS one time password.</td></tr></table>	Option	Description	<i>fortitoken</i>	FortiToken authentication.	<i>email</i>	Email one time password.	<i>sms</i>	SMS one time password.							
	Option	Description														
	<i>fortitoken</i>	FortiToken authentication.														
	<i>email</i>	Email one time password.														
<i>sms</i>	SMS one time password.															
two-factor-notification	Notification method for user activation by FortiToken Cloud.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>email</i></td><td>Email notification for activation code.</td></tr><tr><td><i>sms</i></td><td>SMS notification for activation code.</td></tr></table>	Option	Description	<i>email</i>	Email notification for activation code.	<i>sms</i>	SMS notification for activation code.									
	Option	Description														
	<i>email</i>	Email notification for activation code.														
<i>sms</i>	SMS notification for activation code.															
type	Authentication method.	option	-	password												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>password</i></td><td>Password authentication.</td></tr><tr><td><i>radius</i></td><td>RADIUS server authentication.</td></tr><tr><td><i>tacacs+</i></td><td>TACACS+ server authentication.</td></tr><tr><td><i>ldap</i></td><td>LDAP server authentication.</td></tr></table>	Option	Description	<i>password</i>	Password authentication.	<i>radius</i>	RADIUS server authentication.	<i>tacacs+</i>	TACACS+ server authentication.	<i>ldap</i>	LDAP server authentication.					
	Option	Description														
	<i>password</i>	Password authentication.														
	<i>radius</i>	RADIUS server authentication.														
	<i>tacacs+</i>	TACACS+ server authentication.														
<i>ldap</i>	LDAP server authentication.															
username-sensitivity	Enable/disable case and accent sensitivity when performing username matching (accents are stripped and case is ignored when disabled).	option	-	enable												

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Ignore case and accents. Username at prompt not required to match case or accents.		
	<i>enable</i>	Do not ignore case and accents. Username at prompt must be an exact match.		
workstation	Name of the remote user workstation, if you want to limit the user to authenticate only from a particular workstation.	string	Maximum length: 35	

## config user nac-policy

Configure NAC policy matching pattern to identify matching NAC devices.

```

config user nac-policy
    Description: Configure NAC policy matching pattern to identify matching NAC devices.
    edit <name>
        set category [device|firewall-user|...]
        set description {string}
        set ems-tag {string}
        set family {string}
        set firewall-address {string}
        set host {string}
        set hw-vendor {string}
        set hw-version {string}
        set mac {string}
        set os {string}
        set src {string}
        set ssid-policy {string}
        set status [enable|disable]
        set sw-version {string}
        set switch-fortilink {string}
        set switch-group <name1>, <name2>, ...
        set switch-mac-policy {string}
        set type {string}
        set user {string}
        set user-group {string}
    next
end

```

## config user nac-policy

Parameter	Description	Type	Size	Default
category	Category of NAC policy.	option	-	device

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>device</i>	Device category.		
	<i>firewall-user</i>	Firewall user category.		
	<i>ems-tag</i>	EMS Tag category.		
description	Description for the NAC policy matching pattern.	string	Maximum length: 63	
ems-tag	NAC policy matching EMS tag.	string	Maximum length: 79	
family	NAC policy matching family.	string	Maximum length: 31	
firewall-address *	Dynamic firewall address to associate MAC which match this policy.	string	Maximum length: 79	
host	NAC policy matching host.	string	Maximum length: 64	
hw-vendor	NAC policy matching hardware vendor.	string	Maximum length: 15	
hw-version	NAC policy matching hardware version.	string	Maximum length: 15	
mac	NAC policy matching MAC address.	string	Maximum length: 17	
name	NAC policy name.	string	Maximum length: 63	
os	NAC policy matching operating system.	string	Maximum length: 31	
src	NAC policy matching source.	string	Maximum length: 15	
ssid-policy	SSID policy to be applied on the matched NAC policy.	string	Maximum length: 35	
status	Enable/disable NAC policy.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NAC policy.		
	<i>disable</i>	Disable NAC policy.		
sw-version	NAC policy matching software version.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default
switch-fortilink *	FortiLink interface for which this NAC policy belongs to.	string	Maximum length: 15	
switch-group <name> *	List of managed FortiSwitch groups on which NAC policy can be applied. Managed FortiSwitch group name from available options.	string	Maximum length: 79	
switch-mac-policy *	Switch MAC policy action to be applied on the matched NAC policy.	string	Maximum length: 63	
type	NAC policy matching type.	string	Maximum length: 15	
user	NAC policy matching user.	string	Maximum length: 64	
user-group	NAC policy matching user group.	string	Maximum length: 35	

\* This parameter may not exist in some models.

## config user password-policy

Configure user password policy.

```
config user password-policy
    Description: Configure user password policy.
    edit <name>
        set expire-days {integer}
        set expired-password-renewal [enable|disable]
        set warn-days {integer}
    next
end
```

## config user password-policy

Parameter	Description	Type	Size	Default
expire-days	Time in days before the user's password expires.	integer	Minimum value: 0 Maximum value: 999	180
expired-password-renewal	Enable/disable renewal of a password that already is expired.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable renewal of a password that already is expired.		
	<i>disable</i>	Disable renewal of a password that already is expired.		
name	Password policy name.	string	Maximum length: 35	
warn-days	Time in days before a password expiration warning message is displayed to the user upon login.	integer	Minimum value: 0 Maximum value: 30	15

## config user peer

Configure peer users.

```
config user peer
  Description: Configure peer users.
  edit <name>
    set ca {string}
    set cn {string}
    set cn-type [string|email|...]
    set ldap-mode [password|principal-name]
    set ldap-password {password}
    set ldap-server {string}
    set ldap-username {string}
    set mandatory-ca-verify [enable|disable]
    set oosp-override-server {string}
    set passwd {password}
    set subject {string}
    set two-factor [enable|disable]
  next
end
```

## config user peer

Parameter	Description	Type	Size	Default
ca	Name of the CA certificate.	string	Maximum length: 127	
cn	Peer certificate common name.	string	Maximum length: 255	
cn-type	Peer certificate common name type.	option	-	string

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>string</i></td><td>Normal string.</td></tr><tr><td><i>email</i></td><td>Email address.</td></tr><tr><td><i>FQDN</i></td><td>Fully Qualified Domain Name.</td></tr><tr><td><i>ipv4</i></td><td>IPv4 address.</td></tr><tr><td><i>ipv6</i></td><td>IPv6 address.</td></tr></table>	Option	Description	<i>string</i>	Normal string.	<i>email</i>	Email address.	<i>FQDN</i>	Fully Qualified Domain Name.	<i>ipv4</i>	IPv4 address.	<i>ipv6</i>	IPv6 address.			
	Option	Description														
	<i>string</i>	Normal string.														
	<i>email</i>	Email address.														
	<i>FQDN</i>	Fully Qualified Domain Name.														
	<i>ipv4</i>	IPv4 address.														
	<i>ipv6</i>	IPv6 address.														
ldap-mode	Mode for LDAP peer authentication.	option	-	password												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>password</i></td><td>Username/password.</td></tr><tr><td><i>principal-name</i></td><td>Principal name.</td></tr></table>	Option	Description	<i>password</i>	Username/password.	<i>principal-name</i>	Principal name.									
	Option	Description														
	<i>password</i>	Username/password.														
<i>principal-name</i>	Principal name.															
ldap-password	Password for LDAP server bind.	password	Not Specified													
ldap-server	Name of an LDAP server defined under the user ldap command. Performs client access rights check.	string	Maximum length: 35													
ldap-username	Username for LDAP server bind.	string	Maximum length: 35													
mandatory-ca-verify	Determine what happens to the peer if the CA certificate is not installed. Disable to automatically consider the peer certificate as valid.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.									
	Option	Description														
	<i>enable</i>	Enable setting.														
<i>disable</i>	Disable setting.															
name	Peer name.	string	Maximum length: 35													
ocsp-override-server	Online Certificate Status Protocol (OCSP) server for certificate retrieval.	string	Maximum length: 35													
passwd	Peer's password used for two-factor authentication.	password	Not Specified													
subject	Peer certificate name constraints.	string	Maximum length: 255													
two-factor	Enable/disable two-factor authentication, applying certificate and password-based authentication.	option	-	disable												

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable 2-factor authentication.		
	<i>disable</i>	Disable 2-factor authentication.		

## config user peergrp

Configure peer groups.

```
config user peergrp
    Description: Configure peer groups.
    edit <name>
        set member <name1>, <name2>, ...
    next
end
```

## config user peergrp

Parameter	Description	Type	Size	Default
member <name>	Peer group members. Peer group member name.	string	Maximum length: 35	
name	Peer group name.	string	Maximum length: 35	

## config user pop3

POP3 server entry configuration.

```
config user pop3
    Description: POP3 server entry configuration.
    edit <name>
        set port {integer}
        set secure [none|starttls|...]
        set server {string}
        set ssl-min-proto-version [default|SSLv3|...]
    next
end
```

## config user pop3

Parameter	Description	Type	Size	Default												
name	POP3 server entry name.	string	Maximum length: 35													
port	POP3 service port number.	integer	Minimum value: 0 Maximum value: 65535	0												
secure	SSL connection.	option	-	starttls												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>starttls</i></td><td>Use StartTLS.</td></tr><tr><td><i>pop3s</i></td><td>Use POP3 over SSL.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>starttls</i>	Use StartTLS.	<i>pop3s</i>	Use POP3 over SSL.				
Option	Description															
<i>none</i>	None.															
<i>starttls</i>	Use StartTLS.															
<i>pop3s</i>	Use POP3 over SSL.															
server	Server domain name or IP address.	string	Maximum length: 63													
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections.	option	-	default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>Follow system global setting.</td></tr><tr><td><i>SSLv3</i></td><td>SSLv3.</td></tr><tr><td><i>TLSv1</i></td><td>TLSv1.</td></tr><tr><td><i>TLSv1-1</i></td><td>TLSv1.1.</td></tr><tr><td><i>TLSv1-2</i></td><td>TLSv1.2.</td></tr></table>				Option	Description	<i>default</i>	Follow system global setting.	<i>SSLv3</i>	SSLv3.	<i>TLSv1</i>	TLSv1.	<i>TLSv1-1</i>	TLSv1.1.	<i>TLSv1-2</i>	TLSv1.2.
Option	Description															
<i>default</i>	Follow system global setting.															
<i>SSLv3</i>	SSLv3.															
<i>TLSv1</i>	TLSv1.															
<i>TLSv1-1</i>	TLSv1.1.															
<i>TLSv1-2</i>	TLSv1.2.															

## config user quarantine

Configure quarantine support.

```
config user quarantine
  Description: Configure quarantine support.
  set firewall-groups {string}
  set quarantine [enable|disable]
  config targets
    Description: Quarantine entry to hold multiple MACs.
    edit <entry>
      set description {string}
      config macs
        Description: Quarantine MACs.
```

```

        edit <mac>
            set description {string}
            set drop [disable|enable]
            set parent {string}
        next
    end
next
end
set traffic-policy {string}
end

```

## config user quarantine

Parameter	Description	Type	Size	Default						
firewall-groups	Firewall address group which includes all quarantine MAC address.	string	Maximum length: 79							
quarantine	Enable/disable quarantine.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable quarantine.</td></tr><tr><td><i>disable</i></td><td>Disable quarantine.</td></tr></table>				Option	Description	<i>enable</i>	Enable quarantine.	<i>disable</i>	Disable quarantine.
	Option	Description								
	<i>enable</i>	Enable quarantine.								
<i>disable</i>	Disable quarantine.									
traffic-policy *	Traffic policy for quarantined MACs.	string	Maximum length: 63							

\* This parameter may not exist in some models.

## config targets

Parameter	Description	Type	Size	Default
entry	Quarantine entry name.	string	Maximum length: 63	
description	Description for the quarantine entry.	string	Maximum length: 63	

## config macs

Parameter	Description	Type	Size	Default
mac	Quarantine MAC.	mac-address	Not Specified	00:00:00:00:00:00
description	Description for the quarantine MAC.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default
drop	Enable/disable dropping of quarantined device traffic.	option	-	disable
	Option	Description		
	disable	Sends quarantined device traffic to FortiGate.		
	enable	Blocks quarantined device traffic to FortiGate.		
parent	Parent entry name.	string	Maximum length: 63	

## config user radius

Configure RADIUS server entries.

```
config user radius
  Description: Configure RADIUS server entries.
  edit <name>
    config accounting-server
      Description: Additional accounting servers.
      edit <id>
        set status [enable|disable]
        set server {string}
        set secret {password}
        set port {integer}
        set source-ip {string}
        set interface-select-method [auto|sdwan|...]
        set interface {string}
      next
    end
    set acct-all-servers [enable|disable]
    set acct-interim-interval {integer}
    set all-usergroup [disable|enable]
    set auth-type [auto|ms_chap_v2|...]
    set class <name1>, <name2>, ...
    set delimiter [plus|comma]
    set group-override-attr-type [filter-Id|class]
    set h3c-compatibility [enable|disable]
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set mac-case [uppercase|lowercase]
    set mac-password-delimiter [hyphen|single-hyphen|...]
    set mac-username-delimiter [hyphen|single-hyphen|...]
    set nas-id {string}
    set nas-id-type [legacy|custom|...]
    set nas-ip {ipv4-address}
    set password-encoding [auto|ISO-8859-1]
    set password-renewal [enable|disable]
    set radius-coa [enable|disable]
    set radius-port {integer}
    set rso [enable|disable]
    set rso-context-timeout {integer}
```

```

set rso-endpoint-attribute [User-Name|NAS-IP-Address|...]
set rso-endpoint-block-attribute [User-Name|NAS-IP-Address|...]
set rso-ep-one-ip-only [enable|disable]
set rso-flush-ip-session [enable|disable]
set rso-log-flags {option1}, {option2}, ...
set rso-log-period {integer}
set rso-radius-response [enable|disable]
set rso-radius-server-port {integer}
set rso-secret {password}
set rso-validate-request-secret [enable|disable]
set secondary-secret {password}
set secondary-server {string}
set secret {password}
set server {string}
set source-ip {string}
set sso-attribute [User-Name|NAS-IP-Address|...]
set sso-attribute-key {string}
set sso-attribute-value-override [enable|disable]
set switch-controller-acct-fast-framedip-detect {integer}
set switch-controller-service-type {option1}, {option2}, ...
set tertiary-secret {password}
set tertiary-server {string}
set timeout {integer}
set use-management-vdom [enable|disable]
set username-case-sensitive [enable|disable]

```

next

end

## config user radius

Parameter	Description	Type	Size	Default						
acct-all-servers	Enable/disable sending of accounting messages to all configured servers.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Send accounting messages to all configured servers.</td></tr><tr><td><i>disable</i></td><td>Send accounting message only to servers that are confirmed to be reachable.</td></tr></table>				Option	Description	<i>enable</i>	Send accounting messages to all configured servers.	<i>disable</i>	Send accounting message only to servers that are confirmed to be reachable.
	Option	Description								
	<i>enable</i>	Send accounting messages to all configured servers.								
<i>disable</i>	Send accounting message only to servers that are confirmed to be reachable.									
acct-interim-interval	Time in seconds between each accounting interim update message.	integer	Minimum value: 60 Maximum value: 86400	0						
all-usergroup	Enable/disable automatically including this RADIUS server in all user groups.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not automatically include this server in a user group.</td></tr></table>				Option	Description	<i>disable</i>	Do not automatically include this server in a user group.		
	Option	Description								
<i>disable</i>	Do not automatically include this server in a user group.									

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Include this RADIUS server in every user group.</td></tr></table>	Option	Description	<i>enable</i>	Include this RADIUS server in every user group.											
Option	Description															
<i>enable</i>	Include this RADIUS server in every user group.															
auth-type	Authentication methods/protocols permitted for this RADIUS server.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Use PAP, MSCHAP_v2, and CHAP (in that order).</td></tr><tr><td><i>ms_chap_v2</i></td><td>Microsoft Challenge Handshake Authentication Protocol version 2.</td></tr><tr><td><i>ms_chap</i></td><td>Microsoft Challenge Handshake Authentication Protocol.</td></tr><tr><td><i>chap</i></td><td>Challenge Handshake Authentication Protocol.</td></tr><tr><td><i>pap</i></td><td>Password Authentication Protocol.</td></tr></table>	Option	Description	<i>auto</i>	Use PAP, MSCHAP_v2, and CHAP (in that order).	<i>ms_chap_v2</i>	Microsoft Challenge Handshake Authentication Protocol version 2.	<i>ms_chap</i>	Microsoft Challenge Handshake Authentication Protocol.	<i>chap</i>	Challenge Handshake Authentication Protocol.	<i>pap</i>	Password Authentication Protocol.			
Option	Description															
<i>auto</i>	Use PAP, MSCHAP_v2, and CHAP (in that order).															
<i>ms_chap_v2</i>	Microsoft Challenge Handshake Authentication Protocol version 2.															
<i>ms_chap</i>	Microsoft Challenge Handshake Authentication Protocol.															
<i>chap</i>	Challenge Handshake Authentication Protocol.															
<i>pap</i>	Password Authentication Protocol.															
class <name>	Class attribute name(s). Class name.	string	Maximum length: 79													
delimiter	Configure delimiter to be used for separating profile group names in the SSO attribute.	option	-	plus												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>plus</i></td><td>Plus character "+".</td></tr><tr><td><i>comma</i></td><td>Comma character ",".</td></tr></table>	Option	Description	<i>plus</i>	Plus character "+".	<i>comma</i>	Comma character ",".									
Option	Description															
<i>plus</i>	Plus character "+".															
<i>comma</i>	Comma character ",".															
group-override-attr-type	RADIUS attribute type to override user group information.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>filter-ld</i></td><td>Filter-Id</td></tr><tr><td><i>class</i></td><td>Class</td></tr></table>	Option	Description	<i>filter-ld</i>	Filter-Id	<i>class</i>	Class									
Option	Description															
<i>filter-ld</i>	Filter-Id															
<i>class</i>	Class															
h3c-compatibility	Enable/disable compatibility with the H3C, a mechanism that performs security checking for authentication.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable H3C compatibility.</td></tr><tr><td><i>disable</i></td><td>Disable H3C compatibility.</td></tr></table>	Option	Description	<i>enable</i>	Enable H3C compatibility.	<i>disable</i>	Disable H3C compatibility.									
Option	Description															
<i>enable</i>	Enable H3C compatibility.															
<i>disable</i>	Disable H3C compatibility.															
interface	Specify outgoing interface to reach server.	string	Maximum length: 15													

Parameter	Description	Type	Size	Default										
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.					
	Option	Description												
	auto	Set outgoing interface automatically.												
	sdwan	Set outgoing interface by SD-WAN or policy routing rules.												
specify	Set outgoing interface manually.													
mac-case	MAC authentication case.	option	-	lowercase										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>uppercase</td><td>Use uppercase MAC.</td></tr><tr><td>lowercase</td><td>Use lowercase MAC.</td></tr></table>	Option	Description	uppercase	Use uppercase MAC.	lowercase	Use lowercase MAC.							
	Option	Description												
	uppercase	Use uppercase MAC.												
lowercase	Use lowercase MAC.													
mac-password-delimiter	MAC authentication password delimiter.	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>hyphen</td><td>Use hyphen as delimiter for MAC authentication password.</td></tr><tr><td>single-hyphen</td><td>Use single hyphen as delimiter for MAC authentication password.</td></tr><tr><td>colon</td><td>Use colon as delimiter for MAC authentication password.</td></tr><tr><td>none</td><td>No delimiter for MAC authentication password.</td></tr></table>	Option	Description	hyphen	Use hyphen as delimiter for MAC authentication password.	single-hyphen	Use single hyphen as delimiter for MAC authentication password.	colon	Use colon as delimiter for MAC authentication password.	none	No delimiter for MAC authentication password.			
	Option	Description												
	hyphen	Use hyphen as delimiter for MAC authentication password.												
	single-hyphen	Use single hyphen as delimiter for MAC authentication password.												
	colon	Use colon as delimiter for MAC authentication password.												
none	No delimiter for MAC authentication password.													
mac-username-delimiter	MAC authentication username delimiter.	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>hyphen</td><td>Use hyphen as delimiter for MAC authentication username.</td></tr><tr><td>single-hyphen</td><td>Use single hyphen as delimiter for MAC authentication username.</td></tr><tr><td>colon</td><td>Use colon as delimiter for MAC authentication username.</td></tr><tr><td>none</td><td>No delimiter for MAC authentication username.</td></tr></table>	Option	Description	hyphen	Use hyphen as delimiter for MAC authentication username.	single-hyphen	Use single hyphen as delimiter for MAC authentication username.	colon	Use colon as delimiter for MAC authentication username.	none	No delimiter for MAC authentication username.			
	Option	Description												
	hyphen	Use hyphen as delimiter for MAC authentication username.												
	single-hyphen	Use single hyphen as delimiter for MAC authentication username.												
	colon	Use colon as delimiter for MAC authentication username.												
none	No delimiter for MAC authentication username.													
name	RADIUS server entry name.	string	Maximum length: 35											
nas-id	Custom NAS identifier.	string	Maximum length: 255											
nas-id-type	NAS identifier type configuration.	option	-	legacy										

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>legacy</i></td><td>NAS-ID value is the value previously used by each daemon.</td></tr><tr><td><i>custom</i></td><td>NAS-ID value is customized.</td></tr><tr><td><i>hostname</i></td><td>NAS-ID value is hostname or HA group name if applicable.</td></tr></table>	Option	Description	<i>legacy</i>	NAS-ID value is the value previously used by each daemon.	<i>custom</i>	NAS-ID value is customized.	<i>hostname</i>	NAS-ID value is hostname or HA group name if applicable.			
	Option	Description										
	<i>legacy</i>	NAS-ID value is the value previously used by each daemon.										
	<i>custom</i>	NAS-ID value is customized.										
<i>hostname</i>	NAS-ID value is hostname or HA group name if applicable.											
nas-ip	IP address used to communicate with the RADIUS server and used as NAS-IP-Address and Called-Station-ID attributes.	ipv4-address	Not Specified	0.0.0.0								
password-encoding	Password encoding.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Use original password encoding.</td></tr><tr><td><i>ISO-8859-1</i></td><td>Use ISO-8859-1 password encoding.</td></tr></table>	Option	Description	<i>auto</i>	Use original password encoding.	<i>ISO-8859-1</i>	Use ISO-8859-1 password encoding.					
	Option	Description										
	<i>auto</i>	Use original password encoding.										
<i>ISO-8859-1</i>	Use ISO-8859-1 password encoding.											
password-renewal	Enable/disable password renewal.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable password renewal.</td></tr><tr><td><i>disable</i></td><td>Disable password renewal.</td></tr></table>	Option	Description	<i>enable</i>	Enable password renewal.	<i>disable</i>	Disable password renewal.					
	Option	Description										
	<i>enable</i>	Enable password renewal.										
<i>disable</i>	Disable password renewal.											
radius-coa	Enable to allow a mechanism to change the attributes of an authentication, authorization, and accounting session after it is authenticated.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS CoA.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS CoA.</td></tr></table>	Option	Description	<i>enable</i>	Enable RADIUS CoA.	<i>disable</i>	Disable RADIUS CoA.					
	Option	Description										
	<i>enable</i>	Enable RADIUS CoA.										
<i>disable</i>	Disable RADIUS CoA.											
radius-port	RADIUS service port number.	integer	Minimum value: 0 Maximum value: 65535	0								
rsso	Enable/disable RADIUS based single sign on feature.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS based single sign on feature.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS based single sign on feature.</td></tr></table>	Option	Description	<i>enable</i>	Enable RADIUS based single sign on feature.	<i>disable</i>	Disable RADIUS based single sign on feature.					
	Option	Description										
	<i>enable</i>	Enable RADIUS based single sign on feature.										
<i>disable</i>	Disable RADIUS based single sign on feature.											

Parameter	Description	Type	Size	Default
rsso-context-timeout	Time in seconds before the logged out user is removed from the "user context list" of logged on users.	integer	Minimum value: 0 Maximum value: 4294967295	28800
rsso-endpoint-attribute	RADIUS attributes used to extract the user endpoint identifier from the RADIUS Start record.	option	-	Calling-Station-Id

Option	Description
<i>User-Name</i>	Use this attribute.
<i>NAS-IP-Address</i>	Use this attribute.
<i>Framed-IP-Address</i>	Use this attribute.
<i>Framed-IP-Netmask</i>	Use this attribute.
<i>Filter-Id</i>	Use this attribute.
<i>Login-IP-Host</i>	Use this attribute.
<i>Reply-Message</i>	Use this attribute.
<i>Callback-Number</i>	Use this attribute.
<i>Callback-Id</i>	Use this attribute.
<i>Framed-Route</i>	Use this attribute.
<i>Framed-IPX-Network</i>	Use this attribute.
<i>Class</i>	Use this attribute.
<i>Called-Station-Id</i>	Use this attribute.
<i>Calling-Station-Id</i>	Use this attribute.
<i>NAS-Identifier</i>	Use this attribute.
<i>Proxy-State</i>	Use this attribute.
<i>Login-LAT-Service</i>	Use this attribute.
<i>Login-LAT-Node</i>	Use this attribute.
<i>Login-LAT-Group</i>	Use this attribute.

Parameter	Description	Type	Size	Default																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>Framed-AppleTalk-Zone</i></td><td>Use this attribute.</td></tr><tr><td><i>Acct-Session-Id</i></td><td>Use this attribute.</td></tr><tr><td><i>Acct-Multi-Session-Id</i></td><td>Use this attribute.</td></tr></table>	Option	Description	<i>Framed-AppleTalk-Zone</i>	Use this attribute.	<i>Acct-Session-Id</i>	Use this attribute.	<i>Acct-Multi-Session-Id</i>	Use this attribute.																															
	Option	Description																																						
	<i>Framed-AppleTalk-Zone</i>	Use this attribute.																																						
	<i>Acct-Session-Id</i>	Use this attribute.																																						
<i>Acct-Multi-Session-Id</i>	Use this attribute.																																							
rsso-endpoint-block-attribute	RADIUS attributes used to block a user.	option	-																																					
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>User-Name</i></td><td>Use this attribute.</td></tr><tr><td><i>NAS-IP-Address</i></td><td>Use this attribute.</td></tr><tr><td><i>Framed-IP-Address</i></td><td>Use this attribute.</td></tr><tr><td><i>Framed-IP-Netmask</i></td><td>Use this attribute.</td></tr><tr><td><i>Filter-Id</i></td><td>Use this attribute.</td></tr><tr><td><i>Login-IP-Host</i></td><td>Use this attribute.</td></tr><tr><td><i>Reply-Message</i></td><td>Use this attribute.</td></tr><tr><td><i>Callback-Number</i></td><td>Use this attribute.</td></tr><tr><td><i>Callback-Id</i></td><td>Use this attribute.</td></tr><tr><td><i>Framed-Route</i></td><td>Use this attribute.</td></tr><tr><td><i>Framed-IPX-Network</i></td><td>Use this attribute.</td></tr><tr><td><i>Class</i></td><td>Use this attribute.</td></tr><tr><td><i>Called-Station-Id</i></td><td>Use this attribute.</td></tr><tr><td><i>Calling-Station-Id</i></td><td>Use this attribute.</td></tr><tr><td><i>NAS-Identifier</i></td><td>Use this attribute.</td></tr><tr><td><i>Proxy-State</i></td><td>Use this attribute.</td></tr><tr><td><i>Login-LAT-Service</i></td><td>Use this attribute.</td></tr></table>	Option	Description	<i>User-Name</i>	Use this attribute.	<i>NAS-IP-Address</i>	Use this attribute.	<i>Framed-IP-Address</i>	Use this attribute.	<i>Framed-IP-Netmask</i>	Use this attribute.	<i>Filter-Id</i>	Use this attribute.	<i>Login-IP-Host</i>	Use this attribute.	<i>Reply-Message</i>	Use this attribute.	<i>Callback-Number</i>	Use this attribute.	<i>Callback-Id</i>	Use this attribute.	<i>Framed-Route</i>	Use this attribute.	<i>Framed-IPX-Network</i>	Use this attribute.	<i>Class</i>	Use this attribute.	<i>Called-Station-Id</i>	Use this attribute.	<i>Calling-Station-Id</i>	Use this attribute.	<i>NAS-Identifier</i>	Use this attribute.	<i>Proxy-State</i>	Use this attribute.	<i>Login-LAT-Service</i>	Use this attribute.			
	Option	Description																																						
	<i>User-Name</i>	Use this attribute.																																						
	<i>NAS-IP-Address</i>	Use this attribute.																																						
	<i>Framed-IP-Address</i>	Use this attribute.																																						
	<i>Framed-IP-Netmask</i>	Use this attribute.																																						
	<i>Filter-Id</i>	Use this attribute.																																						
	<i>Login-IP-Host</i>	Use this attribute.																																						
	<i>Reply-Message</i>	Use this attribute.																																						
	<i>Callback-Number</i>	Use this attribute.																																						
	<i>Callback-Id</i>	Use this attribute.																																						
	<i>Framed-Route</i>	Use this attribute.																																						
	<i>Framed-IPX-Network</i>	Use this attribute.																																						
	<i>Class</i>	Use this attribute.																																						
	<i>Called-Station-Id</i>	Use this attribute.																																						
	<i>Calling-Station-Id</i>	Use this attribute.																																						
	<i>NAS-Identifier</i>	Use this attribute.																																						
<i>Proxy-State</i>	Use this attribute.																																							
<i>Login-LAT-Service</i>	Use this attribute.

	Option	Description																
	<i>profile-missing</i>	Enable this log type.																
	<i>accounting-stop-missed</i>	Enable this log type.																
	<i>accounting-event</i>	Enable this log type.																
	<i>endpoint-block</i>	Enable this log type.																
	<i>radiusd-other</i>	Enable this log type.																
<i>none</i>	Disable all logging.																	
rsso-log-period	Time interval in seconds that group event log messages will be generated for dynamic profile events.	integer	Minimum value: 0 Maximum value: 4294967295	0														
rsso-radius-response	Enable/disable sending RADIUS response packets after receiving Start and Stop records.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending RADIUS response packets.</td></tr><tr><td><i>disable</i></td><td>Disable sending RADIUS response packets.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending RADIUS response packets.	<i>disable</i>	Disable sending RADIUS response packets.											
	Option	Description																
	<i>enable</i>	Enable sending RADIUS response packets.																
<i>disable</i>	Disable sending RADIUS response packets.																	
rsso-radius-server-port	UDP port to listen on for RADIUS Start and Stop records.	integer	Minimum value: 0 Maximum value: 65535	1813														
rsso-secret	RADIUS secret used by the RADIUS accounting server.	password	Not Specified															
rsso-validate-request-secret	Enable/disable validating the RADIUS request shared secret in the Start or End record.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable validating RADIUS request shared secret.</td></tr><tr><td><i>disable</i></td><td>Disable validating RADIUS request shared secret.</td></tr></table>	Option	Description	<i>enable</i>	Enable validating RADIUS request shared secret.	<i>disable</i>	Disable validating RADIUS request shared secret.											
	Option	Description																
	<i>enable</i>	Enable validating RADIUS request shared secret.																
<i>disable</i>	Disable validating RADIUS request shared secret.																	
secondary-secret	Secret key to access the secondary server.	password	Not Specified															
secondary-server	Secondary RADIUS CN domain name or IP address.	string	Maximum length: 63															

Parameter	Description	Type	Size	Default
secret	Pre-shared secret key used to access the primary RADIUS server.	password	Not Specified	
server	Primary RADIUS server CN domain name or IP address.	string	Maximum length: 63	
source-ip	Source IP address for communications to the RADIUS server.	string	Maximum length: 63	
sso-attribute	RADIUS attribute that contains the profile group name to be extracted from the RADIUS Start record.	option	-	Class

Option	Description
<i>User-Name</i>	Use this attribute.
<i>NAS-IP-Address</i>	Use this attribute.
<i>Framed-IP-Address</i>	Use this attribute.
<i>Framed-IP-Netmask</i>	Use this attribute.
<i>Filter-Id</i>	Use this attribute.
<i>Login-IP-Host</i>	Use this attribute.
<i>Reply-Message</i>	Use this attribute.
<i>Callback-Number</i>	Use this attribute.
<i>Callback-Id</i>	Use this attribute.
<i>Framed-Route</i>	Use this attribute.
<i>Framed-IPX-Network</i>	Use this attribute.
<i>Class</i>	Use this attribute.
<i>Called-Station-Id</i>	Use this attribute.
<i>Calling-Station-Id</i>	Use this attribute.
<i>NAS-Identifier</i>	Use this attribute.
<i>Proxy-State</i>	Use this attribute.
<i>Login-LAT-Service</i>	Use this attribute.

Parameter	Description	Type	Size	Default

Login-LAT-Group	Use this attribute.	Framed-AppleTalk-Zone	Use this attribute.	Acct-Session-Id	Use this attribute.	Acct-Multi-Session-Id	Use this attribute.							
	Option	Description																		
	Login-LAT-Node	Use this attribute.																		
	Login-LAT-Group	Use this attribute.																		
	Framed-AppleTalk-Zone	Use this attribute.																		
	Acct-Session-Id	Use this attribute.																		
Acct-Multi-Session-Id	Use this attribute.																			
sso-attribute-key	Key prefix for SSO group value in the SSO attribute.	string	Maximum length: 35																	
sso-attribute-value-override	Enable/disable override old attribute value with new value for the same endpoint.	option	-	enable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable override old attribute value with new value for the same endpoint.</td></tr><tr><td>disable</td><td>Disable override old attribute value with new value for the same endpoint.</td></tr></table>	Option	Description	enable	Enable override old attribute value with new value for the same endpoint.	disable	Disable override old attribute value with new value for the same endpoint.													
	Option	Description																		
	enable	Enable override old attribute value with new value for the same endpoint.																		
disable	Disable override old attribute value with new value for the same endpoint.																			
switch-controller-acct-fast-framedip-detect	Switch controller accounting message Framed-IP detection from DHCP snooping.	integer	Minimum value: 2 Maximum value: 600	2																
switch-controller-service-type	RADIUS service type.	option	-																	
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>login</td><td>User should be connected to a host.</td></tr><tr><td>framed</td><td>User use Framed Protocol.</td></tr><tr><td>callback-login</td><td>User disconnected and called back.</td></tr><tr><td>callback-framed</td><td>User disconnected and called back, then a Framed Protocol.</td></tr><tr><td>outbound</td><td>User granted access to outgoing devices.</td></tr><tr><td>administrative</td><td>User granted access to the administrative unsigned interface.</td></tr><tr><td>nas-prompt</td><td>User provided a command prompt on the NAS.</td></tr></table>	Option	Description	login	User should be connected to a host.	framed	User use Framed Protocol.	callback-login	User disconnected and called back.	callback-framed	User disconnected and called back, then a Framed Protocol.	outbound	User granted access to outgoing devices.	administrative	User granted access to the administrative unsigned interface.	nas-prompt	User provided a command prompt on the NAS.			
	Option	Description																		
	login	User should be connected to a host.																		
	framed	User use Framed Protocol.																		
	callback-login	User disconnected and called back.																		
	callback-framed	User disconnected and called back, then a Framed Protocol.																		
	outbound	User granted access to outgoing devices.																		
administrative	User granted access to the administrative unsigned interface.																			
nas-prompt	User provided a command prompt on the NAS.																			

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>authenticate-only</i>	Authentication requested, and no auth info needs to be returned.		
	<i>callback-nas-prompt</i>	User disconnected and called back, then provided a command prompt.		
	<i>call-check</i>	Used by the NAS in an Access-Request packet, Access-Accept to answer the call.		
	<i>callback-administrative</i>	User disconnected and called back, granted access to the admin unsigned interface.		
tertiary-secret	Secret key to access the tertiary server.	password	Not Specified	
tertiary-server	Tertiary RADIUS CN domain name or IP address.	string	Maximum length: 63	
timeout	Time in seconds between re-sending authentication requests.	integer	Minimum value: 1 Maximum value: 300	5
use-management-vdom	Enable/disable using management VDOM to send requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Send requests using the management VDOM.		
	<i>disable</i>	Send requests using the current VDOM.		
username-case-sensitive	Enable/disable case sensitive user names.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable username case-sensitive.		
	<i>disable</i>	Disable username case-sensitive.		

### config accounting-server

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
status	Status.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Log to remote syslog server.		
	<i>disable</i>	Do not log to remote syslog server.		
server	Server CN domain name or IP address.	string	Maximum length: 63	
secret	Secret key.	password	Not Specified	
port	RADIUS accounting port number.	integer	Minimum value: 0 Maximum value: 65535	0
source-ip	Source IP address for communications to the RADIUS server.	string	Maximum length: 63	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	

## config user saml

SAML server entry configuration.

```

config user saml
    Description: SAML server entry configuration.
    edit <name>
        set adfs-claim [enable|disable]
        set auth-url {var-string}
        set cert {string}
        set clock-tolerance {integer}
        set digest-method [shal|sha256]
        set entity-id {string}
        set group-claim-type [email|given-name|...]
        set group-name {string}
        set idp-cert {string}
        set idp-entity-id {string}
        set idp-single-logout-url {string}

```

```

        set idp-single-sign-on-url {string}
        set limit-relaystate [enable|disable]
        set single-logout-url {string}
        set single-sign-on-url {string}
        set user-claim-type [email|given-name|...]
        set user-name {string}
    next
end

```

## config user saml

Parameter	Description	Type	Size	Default
adfs-claim	Enable/disable ADFS Claim for user/group attribute in assertion statement.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable ADFS Claim for user/group attribute in assertion statement.		
	<i>disable</i>	Disable ADFS Claim for user/group attribute in assertion statement.		
auth-url	URL to verify authentication.	var-string	Maximum length: 255	
cert	Certificate to sign SAML messages.	string	Maximum length: 35	
clock-tolerance	Clock skew tolerance in seconds.	integer	Minimum value: 0 Maximum value: 300	15
digest-method	Digest method algorithm.	option	-	sha1
	<b>Option</b>	<b>Description</b>		
	<i>sha1</i>	Digest Method Algorithm is SHA1.		
	<i>sha256</i>	Digest Method Algorithm is SHA256.		
entity-id	SP entity ID.	string	Maximum length: 255	
group-claim-type	Group claim in assertion statement.	option	-	group
	<b>Option</b>	<b>Description</b>		
	<i>email</i>	E-mail address of the user.		
	<i>given-name</i>	Given name of the user.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>name</i>	Unique name of the user.		
	<i>upn</i>	User principal name (UPN) of the user.		
	<i>common-name</i>	Common name of the user.		
	<i>email-adfs-1x</i>	E-mail address of the user when interoperating with AD FS 1.1 or ADFS 1.0.		
	<i>group</i>	Group that the user is a member of.		
	<i>upn-adfs-1x</i>	User principal name (UPN) of the user.		
	<i>role</i>	Role that the user has.		
	<i>sur-name</i>	Surname of the user		
	<i>ppid</i>	Private identifier of the user.		
	<i>name-identifier</i>	SAML name identifier of the user.		
	<i>authentication-method</i>	Method used to authenticate the user.		
	<i>deny-only-group-sid</i>	Deny-only group SID of the user.		
	<i>deny-only-primary-sid</i>	Deny-only primary SID of the user.		
	<i>deny-only-primary-group-sid</i>	Deny-only primary group SID of the user.		
	<i>group-sid</i>	Group SID of the user.		
	<i>primary-group-sid</i>	Primary group SID of the user.		
	<i>primary-sid</i>	Primary SID of the user.		
<i>windows-account-name</i>	Domain account name of the user in the form of <domain>\<user>.			
group-name	Group name in assertion statement.	string	Maximum length: 255	
idp-cert	IDP Certificate name.	string	Maximum length: 35	
idp-entity-id	IDP entity ID.	string	Maximum length: 255	
idp-single-logout-url	IDP single logout url.	string	Maximum length: 255	

Parameter	Description	Type	Size	Default																												
idp-single-sign-on-url	IDP single sign-on URL.	string	Maximum length: 255																													
limit-relaystate	Enable/disable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).	option	-	disable																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).</td></tr><tr><td><i>disable</i></td><td>Disable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).</td></tr></table>				Option	Description	<i>enable</i>	Enable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).	<i>disable</i>	Disable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).																						
	Option	Description																														
	<i>enable</i>	Enable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).																														
<i>disable</i>	Disable limiting of relay-state parameter when it exceeds SAML 2.0 specification limits (80 bytes).																															
name	SAML server entry name.	string	Maximum length: 35

	<i>role</i>	Role that the user has.																														
	<i>sur-name</i>	Surname of the user																														
	<i>ppid</i>	Private identifier of the user.																														
<i>name-identifier</i>	SAML name identifier of the user.																															
<i>authentication-method</i>	Method used to authenticate the user.																															

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>deny-only-group-sid</i>	Deny-only group SID of the user.		
	<i>deny-only-primary-sid</i>	Deny-only primary SID of the user.		
	<i>deny-only-primary-group-sid</i>	Deny-only primary group SID of the user.		
	<i>group-sid</i>	Group SID of the user.		
	<i>primary-group-sid</i>	Primary group SID of the user.		
	<i>primary-sid</i>	Primary SID of the user.		
	<i>windows-account-name</i>	Domain account name of the user in the form of <domain>\<user>.		
user-name	User name in assertion statement.	string	Maximum length: 255	

## config user security-exempt-list

Configure security exemption list.

```

config user security-exempt-list
    Description: Configure security exemption list.
    edit <name>
        set description {string}
        config rule
            Description: Configure rules for exempting users from captive portal
            authentication.
            edit <id>
                set srcaddr <name1>, <name2>, ...
                set dstaddr <name1>, <name2>, ...
                set service <name1>, <name2>, ...
            next
        end
    next
end

```

## config user security-exempt-list

Parameter	Description	Type	Size	Default
description	Description.	string	Maximum length: 127	
name	Name of the exempt list.	string	Maximum length: 35	

## config rule

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
srcaddr <name>	Source addresses or address groups. Address or group name.	string	Maximum length: 79	
dstaddr <name>	Destination addresses or address groups. Address or group name.	string	Maximum length: 79	
service <name>	Destination services. Service name.	string	Maximum length: 79	

## config user setting

Configure user authentication setting.

```
config user setting
    Description: Configure user authentication setting.
    set auth-blackout-time {integer}
    set auth-ca-cert {string}
    set auth-cert {string}
    set auth-http-basic [enable|disable]
    set auth-invalid-max {integer}
    set auth-lockout-duration {integer}
    set auth-lockout-threshold {integer}
    set auth-on-demand [always|implicitly]
    set auth-portal-timeout {integer}
    config auth-ports
        Description: Set up non-standard ports for authentication with HTTP, HTTPS, FTP, and
        TELNET.
        edit <id>
            set type [http|https|...]
            set port {integer}
        next
    end
```

```

set per-policy-disclaimer [enable|disable]
set radius-ses-timeout-act [hard-timeout|ignore-timeout]

```

end

## config user setting

Parameter	Description	Type	Size	Default
auth-blackout-time	Time in seconds an IP address is denied access after failing to authenticate five times within one minute.	integer	Minimum value: 0 Maximum value: 3600	0
auth-ca-cert	HTTPS CA certificate for policy authentication.	string	Maximum length: 35	
auth-cert	HTTPS server certificate for policy authentication.	string	Maximum length: 35	
auth-http-basic	Enable/disable use of HTTP basic authentication for identity-based firewall policies.	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
auth-invalid-max	Maximum number of failed authentication attempts before the user is blocked.	integer	Minimum value: 1 Maximum value: 100	5
auth-lockout-duration	Lockout period in seconds after too many login failures.	integer	Minimum value: 0 Maximum value: 4294967295	0
auth-lockout-threshold	Maximum number of failed login attempts before login lockout is triggered.	integer	Minimum value: 1 Maximum value: 10	3

Parameter	Description	Type	Size	Default												
auth-on-demand	Always/implicitly trigger firewall authentication on demand.	option	-	implicitly												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>always</i></td><td>Always trigger firewall authentication on demand.</td></tr><tr><td><i>implicitly</i></td><td>Implicitly trigger firewall authentication on demand.</td></tr></table>	Option	Description	<i>always</i>	Always trigger firewall authentication on demand.	<i>implicitly</i>	Implicitly trigger firewall authentication on demand.									
Option	Description															
<i>always</i>	Always trigger firewall authentication on demand.															
<i>implicitly</i>	Implicitly trigger firewall authentication on demand.															
auth-portal-timeout	Time in minutes before captive portal user have to re-authenticate.	integer	Minimum value: 1 Maximum value: 30	3												
auth-secure-http	Enable/disable redirecting HTTP user authentication to more secure HTTPS.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.									
Option	Description															
<i>enable</i>	Enable setting.															
<i>disable</i>	Disable setting.															
auth-src-mac	Enable/disable source MAC for user identity.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable source MAC for user identity.</td></tr><tr><td><i>disable</i></td><td>Disable source MAC for user identity.</td></tr></table>	Option	Description	<i>enable</i>	Enable source MAC for user identity.	<i>disable</i>	Disable source MAC for user identity.									
Option	Description															
<i>enable</i>	Enable source MAC for user identity.															
<i>disable</i>	Disable source MAC for user identity.															
auth-ssl-allow-renegotiation	Allow/forbid SSL re-negotiation for HTTPS authentication.	option	-	disable

Option	Description															
<i>enable</i>	Allow SSL re-negotiation.															
<i>disable</i>	Forbid SSL re-negotiation.															
auth-ssl-max- proto-version	Maximum supported protocol version for SSL/TLS connections.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ssl/v3</i></td><td>SSLv3.</td></tr><tr><td><i>tlsv1</i></td><td>TLSv1.</td></tr><tr><td><i>tlsv1-1</i></td><td>TLSv1.1.</td></tr><tr><td><i>tlsv1-2</i></td><td>TLSv1.2.</td></tr><tr><td><i>tlsv1-3</i></td><td>TLSv1.3.</td></tr></table>	Option	Description	<i>ssl/v3</i>	SSLv3.	<i>tlsv1</i>	TLSv1.	<i>tlsv1-1</i>	TLSv1.1.	<i>tlsv1-2</i>	TLSv1.2.	<i>tlsv1-3</i>	TLSv1.3.			
Option	Description															
<i>ssl/v3</i>	SSLv3.															
<i>tlsv1</i>	TLSv1.															
<i>tlsv1-1</i>	TLSv1.1.															
<i>tlsv1-2</i>	TLSv1.2.															
<i>tlsv1-3</i>	TLSv1.3.															

Parameter	Description	Type	Size	Default												
auth-ssl-min-proto-version	Minimum supported protocol version for SSL/TLS connections.	option	-	default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Follow system global setting.</td></tr><tr><td>SSLv3</td><td>SSLv3.</td></tr><tr><td>TLSv1</td><td>TLSv1.</td></tr><tr><td>TLSv1-1</td><td>TLSv1.1.</td></tr><tr><td>TLSv1-2</td><td>TLSv1.2.</td></tr></table>	Option	Description	default	Follow system global setting.	SSLv3	SSLv3.	TLSv1	TLSv1.	TLSv1-1	TLSv1.1.	TLSv1-2	TLSv1.2.			
Option	Description															
default	Follow system global setting.															
SSLv3	SSLv3.															
TLSv1	TLSv1.															
TLSv1-1	TLSv1.1.															
TLSv1-2	TLSv1.2.															
auth-ssl-sigalgs	Set signature algorithms related to HTTPS authentication.	option	-	all												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>no-rsa-pss</td><td>Disable RSA-PSS signature algorithms for HTTPS authentication.</td></tr><tr><td>all</td><td>Enable all supported signature algorithms for HTTPS authentication.</td></tr></table>	Option	Description	no-rsa-pss	Disable RSA-PSS signature algorithms for HTTPS authentication.	all	Enable all supported signature algorithms for HTTPS authentication.									
Option	Description															
no-rsa-pss	Disable RSA-PSS signature algorithms for HTTPS authentication.															
all	Enable all supported signature algorithms for HTTPS authentication.															
auth-timeout	Time in minutes before the firewall user authentication timeout requires the user to re-authenticate.	integer	Minimum value: 1 Maximum value: 1440	5												
auth-timeout-type	Control if authenticated users have to login again after a hard timeout, after an idle timeout, or after a session timeout.	option	-	idle-timeout												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>idle-timeout</td><td>Idle timeout.</td></tr><tr><td>hard-timeout</td><td>Hard timeout.</td></tr><tr><td>new-session</td><td>New session timeout.</td></tr></table>	Option	Description	idle-timeout	Idle timeout.	hard-timeout	Hard timeout.	new-session	New session timeout.							
Option	Description															
idle-timeout	Idle timeout.															
hard-timeout	Hard timeout.															
new-session	New session timeout.															
auth-type	Supported firewall policy authentication protocols/methods.	option	-	http https ftp telnet												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>http</td><td>Allow HTTP authentication.</td></tr><tr><td>https</td><td>Allow HTTPS authentication.</td></tr><tr><td>ftp</td><td>Allow FTP authentication.</td></tr><tr><td>telnet</td><td>Allow TELNET authentication.</td></tr></table>	Option	Description	http	Allow HTTP authentication.	https	Allow HTTPS authentication.	ftp	Allow FTP authentication.	telnet	Allow TELNET authentication.					
Option	Description															
http	Allow HTTP authentication.															
https	Allow HTTPS authentication.															
ftp	Allow FTP authentication.															
telnet	Allow TELNET authentication.															

Parameter	Description	Type	Size	Default
per-policy-disclaimer	Enable/disable per policy disclaimer.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable per policy disclaimer.		
	<i>disable</i>	Disable per policy disclaimer.		
radius-ses-timeout-act	Set the RADIUS session timeout to a hard timeout or to ignore RADIUS server session timeouts.	option	-	hard-timeout
	<b>Option</b>	<b>Description</b>		
	<i>hard-timeout</i>	Use session timeout from RADIUS as hard-timeout.		
	<i>ignore-timeout</i>	Ignore session timeout from RADIUS.		

## config auth-ports

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
type	Service type.	option	-	http
	<b>Option</b>	<b>Description</b>		
	<i>http</i>	HTTP service.		
	<i>https</i>	HTTPS service.		
	<i>ftp</i>	FTP service.		
	<i>telnet</i>	TELNET service.		
port	Non-standard port for firewall user authentication.	integer	Minimum value: 1 Maximum value: 65535	1024

## config user tacacs+

Configure TACACS+ server entries.

```
config user tacacs+
  Description: Configure TACACS+ server entries.
  edit <name>
```

```

set authen-type [mschap|chap|...]
set authorization [enable|disable]
set interface {string}
set interface-select-method [auto|sdwan|...]
set key {password}
set port {integer}
set secondary-key {password}
set secondary-server {string}
set server {string}
set source-ip {string}
set tertiary-key {password}
set tertiary-server {string}
next
end

```

## config user tacacs+

Parameter	Description	Type	Size	Default
authen-type	Allowed authentication protocols/methods.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>mschap</i>	MSCHAP.		
	<i>chap</i>	CHAP.		
	<i>pap</i>	PAP.		
	<i>ascii</i>	ASCII.		
	<i>auto</i>	Use PAP, MSCHAP, and CHAP (in that order).		
	authorization	Enable/disable TACACS+ authorization.	option	-
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable TACACS+ authorization.		
	<i>disable</i>	Disable TACACS+ authorization.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		

Parameter	Description	Type	Size	Default
key	Key to access the primary server.	password	Not Specified	
name	TACACS+ server entry name.	string	Maximum length: 35	
port	Port number of the TACACS+ server.	integer	Minimum value: 1 Maximum value: 65535	49
secondary-key	Key to access the secondary server.	password	Not Specified	
secondary-server	Secondary TACACS+ server CN domain name or IP address.	string	Maximum length: 63	
server	Primary TACACS+ server CN domain name or IP address.	string	Maximum length: 63	
source-ip	Source IP address for communications to TACACS+ server.	string	Maximum length: 63	
tertiary-key	Key to access the tertiary server.	password	Not Specified	
tertiary-server	Tertiary TACACS+ server CN domain name or IP address.	string	Maximum length: 63	

## videofilter

This section includes syntax for the following commands:

- [config videofilter profile on page 1636](#)
- [config videofilter youtube-channel-filter on page 1638](#)
- [config videofilter youtube-key on page 1639](#)

### config videofilter profile

Configure VideoFilter profile.

```
config videofilter profile
  Description: Configure VideoFilter profile.
  edit <name>
    set comment {var-string}
    set dailymotion [enable|disable]
    set default-action [allow|monitor|...]
    config fortiguard-category
      Description: Configure FortiGuard categories.
      config filters
        Description: Configure VideoFilter FortiGuard category.
        edit <id>
          set action [allow|monitor|...]
          set category-id {integer}
          set log [enable|disable]
        next
      end
    end
    set log [enable|disable]
    set replacemsg-group {string}
    set vimeo [enable|disable]
    set youtube [enable|disable]
    set youtube-channel-filter {integer}
  next
end
```

### config videofilter profile

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
dailymotion	Enable/disable Dailymotion video source.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Dailymotion source.		
	<i>disable</i>	Disable Dailymotion source.		
default-action	Video filter default action.	option	-	monitor
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow videos to be accessed.		
	<i>monitor</i>	Monitor videos.		
	<i>block</i>	Block videos.		
log	Enable/disable logging.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable logging.		
	<i>disable</i>	Disable logging.		
name	Name.	string	Maximum length: 35	
replacemsg-group	Replacement message group.	string	Maximum length: 35	
vimeo	Enable/disable Vimeo video source.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Vimeo source.		
	<i>disable</i>	Disable Vimeo source.		
youtube	Enable/disable YouTube video source.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable YouTube source.		
	<i>disable</i>	Disable YouTube source.		
youtube-channel-filter	Set YouTube channel filter.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config filters

Parameter	Description	Type	Size	Default								
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
action	VideoFilter action.	option	-	monitor								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow videos to be accessed.</td></tr><tr><td><i>monitor</i></td><td>Monitor videos.</td></tr><tr><td><i>block</i></td><td>Block videos.</td></tr></table>				Option	Description	<i>allow</i>	Allow videos to be accessed.	<i>monitor</i>	Monitor videos.	<i>block</i>	Block videos.
	Option	Description										
	<i>allow</i>	Allow videos to be accessed.										
	<i>monitor</i>	Monitor videos.										
<i>block</i>	Block videos.											
category-id	Category ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
log	Enable/disable logging.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging.</td></tr><tr><td><i>disable</i></td><td>Disable logging.</td></tr></table>				Option	Description	<i>enable</i>	Enable logging.	<i>disable</i>	Disable logging.		
	Option	Description										
	<i>enable</i>	Enable logging.										
<i>disable</i>	Disable logging.											

## config videofilter youtube-channel-filter

Configure YouTube channel filter.

```
config videofilter youtube-channel-filter
  Description: Configure YouTube channel filter.
  edit <id>
    set comment {var-string}
    config entries
      Description: YouTube filter entries.
      edit <id>
        set comment {var-string}
        set action [allow|monitor|...]
        set channel-id {string}
      next
    end
    set log [enable|disable]
    set name {string}
  next
end
```

## config videofilter youtube-channel-filter

Parameter	Description	Type	Size	Default						
comment	Comment.	var-string	Maximum length: 255

block-message	Enable/disable block MESSAGE requests.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-notify	Enable/disable block NOTIFY requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-options	Enable/disable block OPTIONS requests and no OPTIONS as notifying message for redundancy either.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-prack	Enable/disable block prack requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-publish	Enable/disable block PUBLISH requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-refer	Enable/disable block REFER requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-register	Enable/disable block REGISTER requests.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-subscribe	Enable/disable block SUBSCRIBE requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-update	Enable/disable block UPDATE requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
register-contact-trace	Enable/disable trace original IP/port within the contact header of REGISTER requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
open-via-pinhole	Enable/disable open pinhole for Via port.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
open-record-route-pinhole	Enable/disable open pinhole for Record-Route port.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
rfc2543-branch	Enable/disable support via branch compliant with RFC 2543.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
log-violations	Enable/disable logging of SIP violations.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
log-call-summary	Enable/disable logging of SIP call summary.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
nat-trace	Enable/disable preservation of original IP in SDP i line.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
subscribe-rate	SUBSCRIBE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
subscribe-rate-track	Track the packet protocol field.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		

Parameter	Description	Type	Size	Default								
message-rate	MESSAGE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
message-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
notify-rate	NOTIFY request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
notify-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
refer-rate	REFER request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
refer-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											

Parameter	Description	Type	Size	Default								
update-rate	UPDATE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
update-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
options-rate	OPTIONS request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
options-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
ack-rate	ACK request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
ack-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											

Parameter	Description	Type	Size	Default								
prack-rate	PRACK request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
prack-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
info-rate	INFO request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
info-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
publish-rate	PUBLISH request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
publish-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											

Parameter	Description	Type	Size	Default
bye-rate	BYE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
bye-rate-track	Track the packet protocol field.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
cancel-rate	CANCEL request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
cancel-rate-track	Track the packet protocol field.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
preserve-override	Override i line to preserve original IPs.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
no-sdp-fixup	Enable/disable no SDP fix-up.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
contact-fixup	Fixup contact anyway even if contact's IP:port doesn't match session's IP:port.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>disable</i>			Disable status.
	<i>enable</i>			Enable status.
max-idle-dialogs	Maximum number established but idle dialogs to retain (per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
block-geo-red-options	Enable/disable block OPTIONS requests, but OPTIONS requests still notify for redundancy.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>			Disable status.
	<i>enable</i>			Enable status.
hosted-nat-traversal	Hosted NAT Traversal (HNT).	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>			Disable status.
	<i>enable</i>			Enable status.
hnt-restrict-source-ip	Enable/disable restrict RTP source IP to be the same as SIP source IP when HNT is enabled.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>			Disable status.
	<i>enable</i>			Enable status.
call-id-regex	Validate PCRE regular expression for Call-Id header value.	var-string	Maximum length: 511	
content-type-regex	Validate PCRE regular expression for Content-Type header value.	var-string	Maximum length: 511	
max-body-length	Maximum SIP message body length (0 meaning no limit).	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
unknown-header	Action for unknown SIP header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-request-line	Action for malformed request line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-via	Action for malformed VIA header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-from	Action for malformed From header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-to	Action for malformed To header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		

Parameter	Description	Type	Size	Default								
malformed-header-call-id	Action for malformed Call-ID header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-cseq	Action for malformed CSeq header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-rack	Action for malformed RACK header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-rseq	Action for malformed RSeq header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-contact	Action for malformed Contact header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											

Parameter	Description	Type	Size	Default								
malformed-header-record-route	Action for malformed Record-Route header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-route	Action for malformed Route header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-expires	Action for malformed Expires header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-content-type	Action for malformed Content-Type header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-content-length	Action for malformed Content-Length header.	option	-	pass								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-max-forwards	Action for malformed Max-Forwards header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-allow	Action for malformed Allow header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-p-asserted-identity	Action for malformed P-Asserted-Identity header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-no-require	Action for malformed SIP messages without Require header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-no-proxy-require	Action for malformed SIP messages without Proxy-Require header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-v	Action for malformed SDP v line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-o	Action for malformed SDP o line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-s	Action for malformed SDP s line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-i	Action for malformed SDP i line.	option	-	pass

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-c	Action for malformed SDP c line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-b	Action for malformed SDP b line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-z	Action for malformed SDP z line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-k	Action for malformed SDP k line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-a	Action for malformed SDP a line.	option	-	pass

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-t	Action for malformed SDP t line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-r	Action for malformed SDP r line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-m	Action for malformed SDP m line.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
provisional-invite-expiry-time	Expiry time for provisional INVITE.	integer	Minimum value: 10 Maximum value: 3600	210
ips-rtp	Enable/disable allow IPS on RTP.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
ssl-mode *	SSL/TLS mode for encryption & decryption of traffic.	option	-	off

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>off</i>	No SSL.		
	<i>full</i>	Client to FortiGate and FortiGate to Server SSL.		
ssl-send-empty-frags *	Send empty fragments to avoid attack on CBC IV (SSL 3.0 & TLS 1.0 only).	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Send empty fragments.		
	<i>disable</i>	Do not send empty fragments.		
ssl-client-renegotiation *	Allow/block client renegotiation by server.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow a SSL client to renegotiate.		
	<i>deny</i>	Abort any SSL connection that attempts to renegotiate.		
	<i>secure</i>	Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.		
ssl-algorithm *	Relative strength of encryption algorithms accepted in negotiation.	option	-	high
	<b>Option</b>	<b>Description</b>		
	<i>high</i>	High encryption. Allow only AES and ChaCha.		
	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.		
	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.		
ssl-pfs *	SSL Perfect Forward Secrecy.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>require</i>	PFS mandatory.		
	<i>deny</i>	PFS rejected.		
	<i>allow</i>	PFS allowed.		
ssl-min-version *	Lowest SSL/TLS version to negotiate.	option	-	tls-1.1

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ssl-3.0</td><td>SSL 3.0.</td></tr><tr><td>tls-1.0</td><td>TLS 1.0.</td></tr><tr><td>tls-1.1</td><td>TLS 1.1.</td></tr><tr><td>tls-1.2</td><td>TLS 1.2.</td></tr><tr><td>tls-1.3</td><td>TLS 1.3.</td></tr></table>	Option	Description	ssl-3.0	SSL 3.0.	tls-1.0	TLS 1.0.	tls-1.1	TLS 1.1.	tls-1.2	TLS 1.2.	tls-1.3	TLS 1.3.			
	Option	Description														
	ssl-3.0	SSL 3.0.														
	tls-1.0	TLS 1.0.														
	tls-1.1	TLS 1.1.														
	tls-1.2	TLS 1.2.														
	tls-1.3	TLS 1.3.														
ssl-max-version *	Highest SSL/TLS version to negotiate.	option	-	tls-1.3												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ssl-3.0</td><td>SSL 3.0.</td></tr><tr><td>tls-1.0</td><td>TLS 1.0.</td></tr><tr><td>tls-1.1</td><td>TLS 1.1.</td></tr><tr><td>tls-1.2</td><td>TLS 1.2.</td></tr><tr><td>tls-1.3</td><td>TLS 1.3.</td></tr></table>	Option	Description	ssl-3.0	SSL 3.0.	tls-1.0	TLS 1.0.	tls-1.1	TLS 1.1.	tls-1.2	TLS 1.2.	tls-1.3	TLS 1.3.			
	Option	Description														
	ssl-3.0	SSL 3.0.

### config vpn certificate ca

CA certificate.

```
config vpn certificate ca
  Description: CA certificate.
  edit <name>
    set auto-update-days {integer}
    set auto-update-days-warning {integer}
    set ca {user}
    set ca-identifier {string}
    set obsolete [disable|enable]
    set range [global|vdom]
```

```

        set scep-url {string}
        set source [factory|user|...]
        set source-ip {ipv4-address}
        set ssl-inspection-trusted [enable|disable]
    next
end

```

## config vpn certificate ca

Parameter	Description	Type	Size	Default
auto-update-days	Number of days to wait before requesting an updated CA certificate.	integer	Minimum value: 0 Maximum value: 4294967295	0
auto-update-days-warning	Number of days before an expiry-warning message is generated.	integer	Minimum value: 0 Maximum value: 4294967295	0
ca	CA certificate as a PEM file.	user	Not Specified	
ca-identifier	CA identifier of the SCEP server.	string	Maximum length: 255	
name	Name.	string	Maximum length: 79	
obsolete	Enable/disable this CA as obsolete.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>disable</i>	Alive.		
	<i>enable</i>	Obsolete.		
range	Either global or VDOM IP address range for the CA certificate.	option	-	vdom
	<b>Option</b> <b>Description</b>			
	<i>global</i>	Global range.		
	<i>vdom</i>	VDOM IP address range.		
scep-url	URL of the SCEP server.	string	Maximum length: 255	
source	CA certificate source type.	option	-	user

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>factory</i>	Factory installed certificate.		
	<i>user</i>	User generated certificate.		
	<i>bundle</i>	Bundle file certificate.		
source-ip	Source IP address for communications to the SCEP server.	ipv4-address	Not Specified	0.0.0.0
ssl-inspection-trusted	Enable/disable this CA as a trusted CA for SSL inspection.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Trusted CA for SSL inspection.		
	<i>disable</i>	Untrusted CA for SSL inspection.		

## config vpn certificate crl

Certificate Revocation List as a PEM file.

```

config vpn certificate crl
    Description: Certificate Revocation List as a PEM file.
    edit <name>
        set crl {user}
        set http-url {string}
        set ldap-password {password}
        set ldap-server {string}
        set ldap-username {string}
        set range [global|vdom]
        set scep-cert {string}
        set scep-url {string}
        set source [factory|user|...]
        set source-ip {ipv4-address}
        set update-interval {integer}
        set update-vdom {string}
    next
end

```

## config vpn certificate crl

Parameter	Description	Type	Size	Default
crl	Certificate Revocation List as a PEM file.	user	Not Specified	

Parameter	Description	Type	Size	Default								
http-url	HTTP server URL for CRL auto-update.	string	Maximum length: 255									
ldap-password	LDAP server user password.	password	Not Specified									
ldap-server	LDAP server name for CRL auto-update.	string	Maximum length: 35									
ldap-username	LDAP server user name.	string	Maximum length: 63									
name	Name.	string	Maximum length: 35									
range	Either global or VDOM IP address range for the certificate.	option	-	vdom								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>Global range.</td></tr><tr><td><i>vdom</i></td><td>VDOM IP address range.</td></tr></table>				Option	Description	<i>global</i>	Global range.	<i>vdom</i>	VDOM IP address range.		
Option	Description											
<i>global</i>	Global range.											
<i>vdom</i>	VDOM IP address range.											
scep-cert	Local certificate for SCEP communication for CRL auto-update.	string	Maximum length: 35	Fortinet_CA_SSL								
scep-url	SCEP server URL for CRL auto-update.	string	Maximum length: 255									
source	Certificate source type.	option	-	user								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>factory</i></td><td>Factory installed certificate.</td></tr><tr><td><i>user</i></td><td>User generated certificate.</td></tr><tr><td><i>bundle</i></td><td>Bundle file certificate.</td></tr></table>				Option	Description	<i>factory</i>	Factory installed certificate.	<i>user</i>	User generated certificate.	<i>bundle</i>	Bundle file certificate.
Option	Description											
<i>factory</i>	Factory installed certificate.											
<i>user</i>	User generated certificate.											
<i>bundle</i>	Bundle file certificate.											
source-ip	Source IP address for communications to a HTTP or SCEP CA server.	ipv4-address	Not Specified	0.0.0.0								
update-interval	Time in seconds before the FortiGate checks for an updated CRL. Set to 0 to update only when it expires.	integer	Minimum value: 0 Maximum value: 4294967295	0								
update-vdom	VDOM for CRL update.	string	Maximum length: 31	root								

## config vpn certificate local

Local keys and certificates.

```
config vpn certificate local
  Description: Local keys and certificates.
  edit <name>
    set acme-ca-url {string}
    set acme-domain {string}
    set acme-email {string}
    set acme-renew-window {integer}
    set acme-rsa-key-size {integer}
    set auto-regenerate-days {integer}
    set auto-regenerate-days-warning {integer}
    set ca-identifier {string}
    set certificate {user}
    set cmp-path {string}
    set cmp-regeneration-method [keyupdate|renewal]
    set cmp-server {string}
    set cmp-server-cert {string}
    set comments {string}
    set csr {user}
    set enroll-protocol [none|scep|...]
    set ike-localid {string}
    set ike-localid-type [asn1dn|fqdn]
    set name-encoding [printable|utf8]
    set password {password}
    set private-key {user}
    set private-key-retain [enable|disable]
    set range [global|vdom]
    set scep-password {password}
    set scep-url {string}
    set source [factory|user|...]
    set source-ip {ipv4-address}
    set state {user}
  next
end
```

## config vpn certificate local

Parameter	Description	Type	Size	Default
acme-ca-url	The URL for the ACME CA server.	string	Maximum length: 255	https://acme-v02.api.letsencrypt.org/directory
acme-domain	A valid domain that resolves to this FortiGate unit.	string	Maximum length: 255	
acme-email	Contact email address that is required by some CAs like LetsEncrypt.	string	Maximum length: 255	

Parameter	Description	Type	Size	Default						
acme-renew-window	Beginning of the renewal window.	integer	Minimum value: 1 Maximum value: 100	30						
acme-rsa-key-size	Length of the RSA private key of the generated cert (Minimum 2048 bits).	integer	Minimum value: 2048 Maximum value: 4096	2048						
auto-regenerate-days	Number of days to wait before expiry of an updated local certificate is requested (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0						
auto-regenerate-days-warning	Number of days to wait before an expiry warning message is generated (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0						
ca-identifier	CA identifier of the CA server for signing via SCEP.	string	Maximum length: 255							
certificate	PEM format certificate.	user	Not Specified							
cmp-path	Path location inside CMP server.	string	Maximum length: 255							
cmp-regeneration-method	CMP auto-regeneration method.	option	-	keyupate						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>keyupate</i></td><td>Key Update.</td></tr><tr><td><i>renewal</i></td><td>Renewal.</td></tr></table>				Option	Description	<i>keyupate</i>	Key Update.	<i>renewal</i>	Renewal.
Option	Description									
<i>keyupate</i>	Key Update.									
<i>renewal</i>	Renewal.									
cmp-server	Address and port for CMP server (format = address:port).	string	Maximum length: 63							
cmp-server-cert	CMP server certificate.	string	Maximum length: 79							
comments	Comment.	string	Maximum length: 511							
csr	Certificate Signing Request.	user	Not Specified							

Parameter	Description	Type	Size	Default										
enroll-protocol	Certificate enrollment protocol.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None (default).</td></tr><tr><td><i>scep</i></td><td>Simple Certificate Enrollment Protocol.</td></tr><tr><td><i>cmpv2</i></td><td>Certificate Management Protocol Version 2.</td></tr><tr><td><i>acme2</i></td><td>Automated Certificate Management Environment Version 2.</td></tr></table>	Option	Description	<i>none</i>	None (default).	<i>scep</i>	Simple Certificate Enrollment Protocol.	<i>cmpv2</i>	Certificate Management Protocol Version 2.	<i>acme2</i>	Automated Certificate Management Environment Version 2.			
Option	Description													
<i>none</i>	None (default).													
<i>scep</i>	Simple Certificate Enrollment Protocol.													
<i>cmpv2</i>	Certificate Management Protocol Version 2.													
<i>acme2</i>	Automated Certificate Management Environment Version 2.													
ike-localid	Local ID the FortiGate uses for authentication as a VPN client.	string	Maximum length: 63											
ike-localid-type	IKE local ID type.	option	-	asn1dn										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>asn1dn</i></td><td>ASN.1 distinguished name.</td></tr><tr><td><i>fqdn</i></td><td>Fully qualified domain name.</td></tr></table>	Option	Description	<i>asn1dn</i>	ASN.1 distinguished name.	<i>fqdn</i>	Fully qualified domain name.							
Option	Description													
<i>asn1dn</i>	ASN.1 distinguished name.													
<i>fqdn</i>	Fully qualified domain name.													
name	Name.	string	Maximum length: 35											
name-encoding	Name encoding method for auto-regeneration.	option	-	printable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>printable</i></td><td>Printable encoding (default).</td></tr><tr><td><i>utf8</i></td><td>UTF-8 encoding.</td></tr></table>	Option	Description	<i>printable</i>	Printable encoding (default).	<i>utf8</i>	UTF-8 encoding.							
Option	Description													
<i>printable</i>	Printable encoding (default).													
<i>utf8</i>	UTF-8 encoding.													
password	Password as a PEM file.	password	Not Specified											
private-key	PEM format key encrypted with a password.	user	Not Specified											
private-key-retain	Enable/disable retention of private key during SCEP renewal.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Keep the existing private key during SCEP renewal.</td></tr><tr><td><i>disable</i></td><td>Generate a new private key during SCEP renewal.</td></tr></table>	Option	Description	<i>enable</i>	Keep the existing private key during SCEP renewal.	<i>disable</i>	Generate a new private key during SCEP renewal.							
Option	Description													
<i>enable</i>	Keep the existing private key during SCEP renewal.													
<i>disable</i>	Generate a new private key during SCEP renewal.													

Parameter	Description	Type	Size	Default
range	Either a global or VDOM IP address range for the certificate.	option	-	vdom
	<b>Option</b>	<b>Description</b>		
	<i>global</i>	Global range.		
	<i>vdom</i>	VDOM IP address range.		
scep-password	SCEP server challenge password for auto-regeneration.	password	Not Specified	
scep-url	SCEP server URL.	string	Maximum length: 255	
source	Certificate source type.	option	-	user
	<b>Option</b>	<b>Description</b>		
	<i>factory</i>	Factory installed certificate.		
	<i>user</i>	User generated certificate.		
	<i>bundle</i>	Bundle file certificate.		
source-ip	Source IP address for communications to the SCEP server.	ipv4-address	Not Specified	0.0.0.0
state	Certificate Signing Request State.	user	Not Specified	

## config vpn certificate ocsp-server

OCSP server configuration.

```

config vpn certificate ocsp-server
    Description: OCSP server configuration.
    edit <name>
        set cert {string}
        set secondary-cert {string}
        set secondary-url {string}
        set source-ip {string}
        set unavail-action [revoke|ignore]
        set url {string}
    next
end

```

## config vpn certificate ocsdp-server

Parameter	Description	Type	Size	Default
cert	OCSP server certificate.	string	Maximum length: 127	
name	OCSP server entry name.	string	Maximum length: 35	
secondary-cert	Secondary OCSP server certificate.	string	Maximum length: 127	
secondary-url	Secondary OCSP server URL.	string	Maximum length: 127	
source-ip	Source IP address for dynamic AIA and OCSP queries.	string	Maximum length: 63	
unavail-action	Action when server is unavailable (revoke the certificate or ignore the result of the check).	option	-	revoke
		Option	Description	
		<i>revoke</i>	Revoke certificate if server is unavailable.	
		<i>ignore</i>	Ignore OCSP check if server is unavailable.	
url	OCSP server URL.	string	Maximum length: 127	

## config vpn certificate remote

Remote certificate as a PEM file.

```
config vpn certificate remote
  Description: Remote certificate as a PEM file.
  edit <name>
    set range [global|vdom]
    set remote {user}
    set source [factory|user|...]
  next
end
```

## config vpn certificate remote

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
range	Either the global or VDOM IP address range for the remote certificate.	option	-	vdom
	<b>Option</b>	<b>Description</b>		
	<i>global</i>	Global range.		
	<i>vdom</i>	VDOM IP address range.		
remote	Remote certificate.	user	Not Specified	
source	Remote certificate source type.	option	-	user
	<b>Option</b>	<b>Description</b>		
	<i>factory</i>	Factory installed certificate.		
	<i>user</i>	User generated certificate.		
	<i>bundle</i>	Bundle file certificate.		

## config vpn certificate setting

VPN certificate setting.

```

config vpn certificate setting
    Description: VPN certificate setting.
    set cert-expire-warning {integer}
    set certname-dsa1024 {string}
    set certname-dsa2048 {string}
    set certname-ecdsa256 {string}
    set certname-ecdsa384 {string}
    set certname-ecdsa521 {string}
    set certname-ed25519 {string}
    set certname-ed448 {string}
    set certname-rsa1024 {string}
    set certname-rsa2048 {string}
    set certname-rsa4096 {string}
    set check-ca-cert [enable|disable]
    set check-ca-chain [enable|disable]
    set cmp-key-usage-checking [enable|disable]
    set cmp-save-extra-certs [enable|disable]
    set cn-allow-multi [disable|enable]
    set cn-match [substring|value]
    config crl-verification
        Description: CRL verification options.
        set expiry [ignore|revoke]
        set leaf-crl-absence [ignore|revoke]
        set chain-crl-absence [ignore|revoke]
    end
    set interface {string}
    set interface-select-method [auto|sdwan|...]

```

```

set ocsdp-default-server {string}
set ocsdp-option [certificate|server]
set ocsdp-status [enable|disable]
set proxy {string}
set proxy-password {password}
set proxy-port {integer}
set proxy-username {string}
set source-ip {string}
set ssl-min-proto-version [default|SSLv3|...]
set strict-ocsp-check [enable|disable]
set subject-match [substring|value]
set subject-set [subset|superset]

```

end

## config vpn certificate setting

Parameter	Description	Type	Size	Default
cert-expire-warning	Number of days before a certificate expires to send a warning. Set to 0 to disable sending of the warning.	integer	Minimum value: 0 Maximum value: 100	14
certname-dsa1024	1024 bit DSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_DSA1024
certname-dsa2048	2048 bit DSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_DSA2048
certname-ecdsa256	256 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA256
certname-ecdsa384	384 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA384
certname-ecdsa521	521 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA521
certname-ed25519	253 bit EdDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ED25519
certname-ed448	456 bit EdDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ED448
certname-rsa1024	1024 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA1024

Parameter	Description	Type	Size	Default						
certname-rsa2048	2048 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA2048						
certname-rsa4096	4096 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA4096						
check-ca-cert	Enable/disable verification of the user certificate and pass authentication if any CA in the chain is trusted.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable verification of the user certificate.</td></tr><tr><td>disable</td><td>Disable verification of the user certificate.</td></tr></table>	Option	Description	enable	Enable verification of the user certificate.	disable	Disable verification of the user certificate.			
Option	Description									
enable	Enable verification of the user certificate.									
disable	Disable verification of the user certificate.									
check-ca-chain	Enable/disable verification of the entire certificate chain and pass authentication only if the chain is complete and all of the CAs in the chain are trusted.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable verification of the entire certificate chain.</td></tr><tr><td>disable</td><td>Disable verification of the entire certificate chain.</td></tr></table>	Option	Description	enable	Enable verification of the entire certificate chain.	disable	Disable verification of the entire certificate chain.			
Option	Description									
enable	Enable verification of the entire certificate chain.									
disable	Disable verification of the entire certificate chain.									
cmp-key-usage-checking	Enable/disable server certificate key usage checking in CMP mode.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable server certificate key usage checking in CMP mode.</td></tr><tr><td>disable</td><td>Disable server certificate key usage checking in CMP mode.</td></tr></table>	Option	Description	enable	Enable server certificate key usage checking in CMP mode.	disable	Disable server certificate key usage checking in CMP mode.			
Option	Description									
enable	Enable server certificate key usage checking in CMP mode.									
disable	Disable server certificate key usage checking in CMP mode.									
cmp-save-extra-certs	Enable/disable saving extra certificates in CMP mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable saving extra certificates in CMP mode.</td></tr><tr><td>disable</td><td>Disable saving extra certificates in CMP mode.</td></tr></table>	Option	Description	enable	Enable saving extra certificates in CMP mode.	disable	Disable saving extra certificates in CMP mode.			
Option	Description									
enable	Enable saving extra certificates in CMP mode.									
disable	Disable saving extra certificates in CMP mode.									
cn-allow-multi	When searching for a matching certificate, allow multiple CN fields in certificate subject name.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Does not allow multiple CN entries in certificate matching.</td></tr></table>	Option	Description	disable	Does not allow multiple CN entries in certificate matching.					
Option	Description									
disable	Does not allow multiple CN entries in certificate matching.									

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Allow multiple CN entries in certificate matching.		
cn-match	When searching for a matching certificate, control how to do CN value matching with certificate subject name.	option	-	substring
	<b>Option</b>	<b>Description</b>		
	<i>substring</i>	Find a match if the name being searched for is a part or the same as a certificate CN.		
	<i>value</i>	Find a match if the name being searched for is same as a certificate CN.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
ocsp-default-server	Default OCSP server.	string	Maximum length: 35	
ocsp-option	Specify whether the OCSP URL is from certificate or configured OCSP server.	option	-	server
	<b>Option</b>	<b>Description</b>		
	<i>certificate</i>	Use URL from certificate.		
	<i>server</i>	Use URL from configured OCSP server.		
ocsp-status	Enable/disable receiving certificates using the OCSP.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
proxy	Proxy server FQDN or IP for OCSP/CA queries during certificate verification.	string	Maximum length: 127	

Parameter	Description	Type	Size	Default												
proxy-password	Proxy server password.	password	Not Specified													
proxy-port	Proxy server port.	integer	Minimum value: 1 Maximum value: 65535	8080												
proxy-username	Proxy server user name.	string	Maximum length: 63													
source-ip	Source IP address for dynamic AIA and OCSP queries.	string	Maximum length: 63													
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections.	option	-	default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Follow system global setting.</td></tr><tr><td>SSLv3</td><td>SSLv3.</td></tr><tr><td>TLSv1</td><td>TLSv1.</td></tr><tr><td>TLSv1-1</td><td>TLSv1.1.</td></tr><tr><td>TLSv1-2</td><td>TLSv1.2.</td></tr></table>				Option	Description	default	Follow system global setting.	SSLv3	SSLv3.	TLSv1	TLSv1.	TLSv1-1	TLSv1.1.	TLSv1-2	TLSv1.2.
Option	Description															
default	Follow system global setting.															
SSLv3	SSLv3.															
TLSv1	TLSv1.															
TLSv1-1	TLSv1.1.															
TLSv1-2	TLSv1.2.															
strict-ocsp-check	Enable/disable strict mode OCSP checking.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable strict mode OCSP checking.</td></tr><tr><td>disable</td><td>Disable strict mode OCSP checking.</td></tr></table>				Option	Description	enable	Enable strict mode OCSP checking.	disable	Disable strict mode OCSP checking.						
Option	Description															
enable	Enable strict mode OCSP checking.															
disable	Disable strict mode OCSP checking.															
subject-match	When searching for a matching certificate, control how to do RDN value matching with certificate subject name.	option	-	substring												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>substring</td><td>Find a match if the name being searched for is a part or the same as a certificate subject RDN.</td></tr><tr><td>value</td><td>Find a match if the name being searched for is same as a certificate subject RDN.</td></tr></table>				Option	Description	substring	Find a match if the name being searched for is a part or the same as a certificate subject RDN.	value	Find a match if the name being searched for is same as a certificate subject RDN.						
Option	Description															
substring	Find a match if the name being searched for is a part or the same as a certificate subject RDN.															
value	Find a match if the name being searched for is same as a certificate subject RDN.															

Parameter	Description	Type	Size	Default						
subject-set	When searching for a matching certificate, control how to do RDN set matching with certificate subject name.	option	-	subset						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>subset</i></td><td>Find a match if the name being searched for is a subset of a certificate subject.</td></tr><tr><td><i>superset</i></td><td>Find a match if the name being searched for is a superset of a certificate subject.</td></tr></table>				Option	Description	<i>subset</i>	Find a match if the name being searched for is a subset of a certificate subject.	<i>superset</i>	Find a match if the name being searched for is a superset of a certificate subject.
Option	Description									
<i>subset</i>	Find a match if the name being searched for is a subset of a certificate subject.									
<i>superset</i>	Find a match if the name being searched for is a superset of a certificate subject.									

## config crl-verification

Parameter	Description	Type	Size	Default
expiry	CRL verification option when CRL is expired.	option	-	ignore
	<b>Option</b>	<b>Description</b>		
	<i>ignore</i>	Certificate status will be verified even if CRL is expired.		
	<i>revoke</i>	Certificate will be revoked if CRL is expired.		
leaf-crl-absence	CRL verification option when leaf CRL is absent.	option	-	ignore
	<b>Option</b>	<b>Description</b>		
	<i>ignore</i>	CRL verification against leaf certificate is ignored if CRL is absent.		
	<i>revoke</i>	Certificate will be revoked if CRL of leaf certificate is absent.		
chain-crl-absence	CRL verification option when CRL of any certificate in chain is absent.	option	-	ignore
	<b>Option</b>	<b>Description</b>		
	<i>ignore</i>	CRL verification is ignored if CRL of any certificate in chain is absent.		
	<i>revoke</i>	Certificate will be revoked if CRL of any certificate in chain is absent.		

## config vpn ipsec concentrator

Concentrator configuration.

```
config vpn ipsec concentrator
    Description: Concentrator configuration.
    edit <id>
        set member <name1>, <name2>, ...
        set name {string}
        set src-check [disable|enable]
```

```

next
end

```

## config vpn ipsec concentrator

Parameter	Description	Type	Size	Default						
id	Concentrator ID.	integer	Minimum value: 1 Maximum value: 65535	0						
member <name>	Names of up to 3 VPN tunnels to add to the concentrator. Member name.	string	Maximum length: 79							
name	Concentrator name.	string	Maximum length: 35							
src-check	Enable to check source address of phase 2 selector. Disable to check only the destination selector.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Ignore source selector when choosing tunnel.</td></tr><tr><td><i>enable</i></td><td>Use source selector to choose tunnel.</td></tr></table>				Option	Description	<i>disable</i>	Ignore source selector when choosing tunnel.	<i>enable</i>	Use source selector to choose tunnel.
Option	Description									
<i>disable</i>	Ignore source selector when choosing tunnel.									
<i>enable</i>	Use source selector to choose tunnel.									

## config vpn ipsec fec

### Configure Forward Error Correction (FEC) mapping profiles.

```

config vpn ipsec fec
  Description: Configure Forward Error Correction (FEC) mapping profiles.
  edit <name>
    config mappings
      Description: FEC redundancy mapping table.
      edit <seqno>
        set base {integer}
        set redundant {integer}
        set packet-loss-threshold {integer}
        set latency-threshold {integer}
        set bandwidth-up-threshold {integer}
        set bandwidth-down-threshold {integer}
        set bandwidth-bi-threshold {integer}
      next
    end
  next
end

```

## config vpn ipsec fec

Parameter	Description	Type	Size	Default
name	Profile name.	string	Maximum length: 35	

## config mappings

Parameter	Description	Type	Size	Default
seqno	Sequence number.	integer	Minimum value: 0 Maximum value: 64	0
base	Number of base FEC packets.	integer	Minimum value: 1 Maximum value: 20	0
redundant	Number of redundant FEC packets.	integer	Minimum value: 1 Maximum value: 5	0
packet-loss-threshold	Apply FEC parameters when packet loss is >= threshold.	integer	Minimum value: 0 Maximum value: 100	0
latency-threshold	Apply FEC parameters when latency is <= threshold (0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0
bandwidth-up-threshold	Apply FEC parameters when available up bandwidth is >= threshold (kbps, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0
bandwidth-down-threshold	Apply FEC parameters when available down bandwidth is >= threshold (kbps, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
bandwidth-bi-threshold	Apply FEC parameters when available bi-bandwidth is >= threshold (kbps, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0

## config vpn ipsec forticlient

Configure FortiClient policy realm.

```
config vpn ipsec forticlient
    Description: Configure FortiClient policy realm.
    edit <realm>
        set phase2name {string}
        set status [enable|disable]
        set usergroupname {string}
    next
end
```

## config vpn ipsec forticlient

Parameter	Description	Type	Size	Default						
phase2name	Phase 2 tunnel name that you defined in the FortiClient dialup configuration.	string	Maximum length: 35							
realm	FortiClient realm name.	string	Maximum length: 35							
status	Enable/disable this FortiClient configuration.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
usergroupname	User group name for FortiClient users.	string	Maximum length: 35							

## config vpn ipsec manualkey-interface

Configure IPsec manual keys.

```
config vpn ipsec manualkey-interface
    Description: Configure IPsec manual keys.
    edit <name>
        set addr-type [4|6]
        set auth-alg [null|md5|...]
    next
end
```

```

set auth-key {user}
set enc-alg [null|des|...]
set enc-key {user}
set interface {string}
set ip-version [4|6]
set local-gw {ipv4-address-any}
set local-gw6 {ipv6-address}
set local-spi {user}
set npu-offload [enable|disable]
set remote-gw {ipv4-address}
set remote-gw6 {ipv6-address}
set remote-spi {user}
next
end

```

## config vpn ipsec manualkey-interface

Parameter	Description	Type	Size	Default														
addr-type	IP version to use for IP packets.	option	-	4														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>4</td><td>Use IPv4 addressing for IP packets.</td></tr><tr><td>6</td><td>Use IPv6 addressing for IP packets.</td></tr></table>	Option	Description	4	Use IPv4 addressing for IP packets.	6	Use IPv6 addressing for IP packets.											
Option	Description																	
4	Use IPv4 addressing for IP packets.																	
6	Use IPv6 addressing for IP packets.																	
auth-alg	Authentication algorithm. Must be the same for both ends of the tunnel.	option	-	null														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>null</td><td>null</td></tr><tr><td>md5</td><td>md5</td></tr><tr><td>sha1</td><td>sha1</td></tr><tr><td>sha256</td><td>sha256</td></tr><tr><td>sha384</td><td>sha384</td></tr><tr><td>sha512</td><td>sha512</td></tr></table>	Option	Description	null	null	md5	md5	sha1	sha1	sha256	sha256	sha384	sha384	sha512	sha512			
Option	Description																	
null	null																	
md5	md5																	
sha1	sha1																	
sha256	sha256																	
sha384	sha384																	
sha512	sha512																	
auth-key	Hexadecimal authentication key in 16-digit (8-byte) segments separated by hyphens.	user	Not Specified															
enc-alg	Encryption algorithm. Must be the same for both ends of the tunnel.	option	-	null														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>null</td><td>null</td></tr><tr><td>des</td><td>des</td></tr></table>	Option	Description	null	null	des	des

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>3des</i></td><td>3des</td></tr><tr><td><i>aes128</i></td><td>aes128</td></tr><tr><td><i>aes192</i></td><td>aes192</td></tr><tr><td><i>aes256</i></td><td>aes256</td></tr><tr><td><i>aria128</i></td><td>aria128</td></tr><tr><td><i>aria192</i></td><td>aria192</td></tr><tr><td><i>aria256</i></td><td>aria256</td></tr><tr><td><i>seed</i></td><td>seed</td></tr></table>		Option	Description	<i>3des</i>	3des	<i>aes128</i>	aes128	<i>aes192</i>	aes192	<i>aes256</i>	aes256	<i>aria128</i>	aria128	<i>aria192</i>	aria192	<i>aria256</i>	aria256	<i>seed</i>	seed			
	Option	Description																					
	<i>3des</i>	3des																					
	<i>aes128</i>	aes128																					
	<i>aes192</i>	aes192																					
	<i>aes256</i>	aes256																					
	<i>aria128</i>	aria128																					
	<i>aria192</i>	aria192																					
	<i>aria256</i>	aria256																					
<i>seed</i>	seed																						
enc-key	Hexadecimal encryption key in 16-digit (8-byte) segments separated by hyphens.	user	Not Specified																				
interface	Name of the physical, aggregate, or VLAN interface.	string	Maximum length: 15																				
ip-version	IP version to use for VPN interface.	option	-	4																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>4</td><td>Use IPv4 addressing for gateways.</td></tr><tr><td>6</td><td>Use IPv6 addressing for gateways.</td></tr></table>		Option	Description	4	Use IPv4 addressing for gateways.	6	Use IPv6 addressing for gateways.															
	Option	Description																					
	4	Use IPv4 addressing for gateways.																					
6	Use IPv6 addressing for gateways.																						
local-gw	IPv4 address of the local gateway's external interface.	ipv4-address-any	Not Specified	0.0.0.0																			
local-gw6	Local IPv6 address of VPN gateway.	ipv6-address	Not Specified	::																			
local-spi	Local SPI, a hexadecimal 8-digit (4-byte) tag. Discerns between two traffic streams with different encryption rules.	user	Not Specified																				
name	IPsec tunnel name.	string	Maximum length: 15																				
npu-offload *	Enable/disable offloading IPsec VPN manual key sessions to NPUs.	option	-	enable																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU offloading.</td></tr><tr><td><i>disable</i></td><td>Disable NPU offloading.</td></tr></table>		Option	Description	<i>enable</i>	Enable NPU offloading.	<i>disable</i>	Disable NPU offloading.															
	Option	Description																					
	<i>enable</i>	Enable NPU offloading.																					
<i>disable</i>	Disable NPU offloading.																						

Parameter	Description	Type	Size	Default
remote-gw	IPv4 address of the remote gateway's external interface.	ipv4-address	Not Specified	0.0.0.0
remote-gw6	Remote IPv6 address of VPN gateway.	ipv6-address	Not Specified	::
remote-spi	Remote SPI, a hexadecimal 8-digit (4-byte) tag. Discerns between two traffic streams with different encryption rules.	user	Not Specified	

\* This parameter may not exist in some models.

## config vpn ipsec manualkey

Configure IPsec manual keys.

```

config vpn ipsec manualkey
    Description: Configure IPsec manual keys.
    edit <name>
        set authentication [null|md5|...]
        set authkey {user}
        set enckey {user}
        set encryption [null|des|...]
        set interface {string}
        set local-gw {ipv4-address-any}
        set localspi {user}
        set npu-offload [enable|disable]
        set remote-gw {ipv4-address}
        set remotespi {user}
    next
end

```

## config vpn ipsec manualkey

Parameter	Description	Type	Size	Default
authentication	Authentication algorithm. Must be the same for both ends of the tunnel.	option	-	null
		Option	Description	
		<i>null</i>	Null.	
		<i>md5</i>	MD5.	
		<i>sha1</i>	SHA1.

## config vpn ipsec phase1-interface

Parameter	Description	Type	Size	Default						
acct-verify	Enable/disable verification of RADIUS accounting record.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of RADIUS accounting record.</td></tr><tr><td><i>disable</i></td><td>Disable verification of RADIUS accounting record.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of RADIUS accounting record.	<i>disable</i>	Disable verification of RADIUS accounting record.			
Option	Description									
<i>enable</i>	Enable verification of RADIUS accounting record.									
<i>disable</i>	Disable verification of RADIUS accounting record.									
add-gw-route	Enable/disable automatically add a route to the remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Automatically add a route to the remote gateway.</td></tr><tr><td><i>disable</i></td><td>Do not automatically add a route to the remote gateway.</td></tr></table>	Option	Description	<i>enable</i>	Automatically add a route to the remote gateway.	<i>disable</i>	Do not automatically add a route to the remote gateway.			
Option	Description									
<i>enable</i>	Automatically add a route to the remote gateway.									
<i>disable</i>	Do not automatically add a route to the remote gateway.									
add-route	Enable/disable control addition of a route to peer destination selector.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not add a route to destination of peer selector.</td></tr><tr><td><i>enable</i></td><td>Add route to destination of peer selector.</td></tr></table>	Option	Description	<i>disable</i>	Do not add a route to destination of peer selector.	<i>enable</i>	Add route to destination of peer selector.			
Option	Description									
<i>disable</i>	Do not add a route to destination of peer selector.									
<i>enable</i>	Add route to destination of peer selector.									

Parameter	Description	Type	Size	Default										
aggregate-member	Enable/disable use as an aggregate member.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use as an aggregate member.</td></tr><tr><td><i>disable</i></td><td>Disable use as an aggregate member.</td></tr></table>	Option	Description	<i>enable</i>	Enable use as an aggregate member.	<i>disable</i>	Disable use as an aggregate member.							
Option	Description													
<i>enable</i>	Enable use as an aggregate member.													
<i>disable</i>	Disable use as an aggregate member.													
aggregate-weight	Link weight for aggregate.	integer	Minimum value: 1 Maximum value: 100	1										
assign-ip	Enable/disable assignment of IP to IPsec interface via configuration method.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not assign an IP address to the IPsec interface.</td></tr><tr><td><i>enable</i></td><td>Assign an IP address to the IPsec interface.</td></tr></table>	Option	Description	<i>disable</i>	Do not assign an IP address to the IPsec interface.	<i>enable</i>	Assign an IP address to the IPsec interface.							
Option	Description													
<i>disable</i>	Do not assign an IP address to the IPsec interface.													
<i>enable</i>	Assign an IP address to the IPsec interface.													
assign-ip-from	Method by which the IP address will be assigned.	option	-	range										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>range</i></td><td>Assign IP address from locally defined range.</td></tr><tr><td><i>usrgrp</i></td><td>Assign IP address via user group.</td></tr><tr><td><i>dhcp</i></td><td>Assign IP address via DHCP.</td></tr><tr><td><i>name</i></td><td>Assign IP address from firewall address or group.</td></tr></table>	Option	Description	<i>range</i>	Assign IP address from locally defined range.	<i>usrgrp</i>	Assign IP address via user group.	<i>dhcp</i>	Assign IP address via DHCP.	<i>name</i>	Assign IP address from firewall address or group.			
Option	Description													
<i>range</i>	Assign IP address from locally defined range.													
<i>usrgrp</i>	Assign IP address via user group.													
<i>dhcp</i>	Assign IP address via DHCP.													
<i>name</i>	Assign IP address from firewall address or group.													
authmethod	Authentication method.	option	-	psk										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>psk</i></td><td>PSK authentication method.</td></tr><tr><td><i>signature</i></td><td>Signature authentication method.</td></tr></table>	Option	Description	<i>psk</i>	PSK authentication method.	<i>signature</i>	Signature authentication method.							
Option	Description													
<i>psk</i>	PSK authentication method.													
<i>signature</i>	Signature authentication method.													
authmethod-remote	Authentication method (remote side).	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>psk</i></td><td>PSK authentication method.</td></tr><tr><td><i>signature</i></td><td>Signature authentication method.</td></tr></table>	Option	Description	<i>psk</i>	PSK authentication method.	<i>signature</i>	Signature authentication method.							
Option	Description													
<i>psk</i>	PSK authentication method.													
<i>signature</i>	Signature authentication method.													

Parameter	Description	Type	Size	Default						
authpasswd	XAuth password (max 35 characters).	password	Not Specified							
authusr	XAuth user name.	string	Maximum length: 64							
authusrgrp	Authentication user group.	string	Maximum length: 35							
auto-discovery-crossover	Allow/block set-up of short-cut tunnels between different network IDs.	option	-	allow						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow set-up of short-cut tunnels between different network IDs.</td></tr><tr><td><i>block</i></td><td>Block set-up of short-cut tunnels between different network IDs.</td></tr></table>	Option	Description	<i>allow</i>	Allow set-up of short-cut tunnels between different network IDs.	<i>block</i>	Block set-up of short-cut tunnels between different network IDs.			
Option	Description									
<i>allow</i>	Allow set-up of short-cut tunnels between different network IDs.									
<i>block</i>	Block set-up of short-cut tunnels between different network IDs.									
auto-discovery-forwarder	Enable/disable forwarding auto-discovery short-cut messages.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable forwarding auto-discovery short-cut messages.</td></tr><tr><td><i>disable</i></td><td>Disable forwarding auto-discovery short-cut messages.</td></tr></table>	Option	Description	<i>enable</i>	Enable forwarding auto-discovery short-cut messages.	<i>disable</i>	Disable forwarding auto-discovery short-cut messages.			
Option	Description									
<i>enable</i>	Enable forwarding auto-discovery short-cut messages.									
<i>disable</i>	Disable forwarding auto-discovery short-cut messages.									
auto-discovery-offer-interval	Interval between shortcut offer messages in seconds.	integer	Minimum value: 1 Maximum value: 300	5						
auto-discovery-psk	Enable/disable use of pre-shared secrets for authentication of auto-discovery tunnels.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of pre-shared-secret authentication for auto-discovery tunnels.</td></tr><tr><td><i>disable</i></td><td>Disable use of authentication defined by 'authmethod' for auto-discovery tunnels.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of pre-shared-secret authentication for auto-discovery tunnels.	<i>disable</i>	Disable use of authentication defined by 'authmethod' for auto-discovery tunnels.			
Option	Description									
<i>enable</i>	Enable use of pre-shared-secret authentication for auto-discovery tunnels.									
<i>disable</i>	Disable use of authentication defined by 'authmethod' for auto-discovery tunnels.									
auto-discovery-receiver	Enable/disable accepting auto-discovery short-cut messages.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable receiving auto-discovery short-cut messages.</td></tr><tr><td><i>disable</i></td><td>Disable receiving auto-discovery short-cut messages.</td></tr></table>	Option	Description	<i>enable</i>	Enable receiving auto-discovery short-cut messages.	<i>disable</i>	Disable receiving auto-discovery short-cut messages.			
Option	Description									
<i>enable</i>	Enable receiving auto-discovery short-cut messages.									
<i>disable</i>	Disable receiving auto-discovery short-cut messages.									
auto-discovery-sender	Enable/disable sending auto-discovery short-cut messages.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending auto-discovery short-cut messages.</td></tr><tr><td><i>disable</i></td><td>Disable sending auto-discovery short-cut messages.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending auto-discovery short-cut messages.	<i>disable</i>	Disable sending auto-discovery short-cut messages.			
	Option	Description								
	<i>enable</i>	Enable sending auto-discovery short-cut messages.								
<i>disable</i>	Disable sending auto-discovery short-cut messages.									
auto-discovery-shortcuts	Control deletion of child short-cut tunnels when the parent tunnel goes down.	option	-	independent						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>independent</i></td><td>Short-cut tunnels remain up if the parent tunnel goes down.</td></tr><tr><td><i>dependent</i></td><td>Short-cut tunnels are brought down if the parent tunnel goes down.</td></tr></table>	Option	Description	<i>independent</i>	Short-cut tunnels remain up if the parent tunnel goes down.	<i>dependent</i>	Short-cut tunnels are brought down if the parent tunnel goes down.			
	Option	Description								
	<i>independent</i>	Short-cut tunnels remain up if the parent tunnel goes down.								
<i>dependent</i>	Short-cut tunnels are brought down if the parent tunnel goes down.									
auto-negotiate	Enable/disable automatic initiation of IKE SA negotiation.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic initiation of IKE SA negotiation.</td></tr><tr><td><i>disable</i></td><td>Disable automatic initiation of IKE SA negotiation.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic initiation of IKE SA negotiation.	<i>disable</i>	Disable automatic initiation of IKE SA negotiation.			
	Option	Description								
	<i>enable</i>	Enable automatic initiation of IKE SA negotiation.								
<i>disable</i>	Disable automatic initiation of IKE SA negotiation.									
backup-gateway <address>	Instruct unity clients about the backup gateway address(es). Address of backup gateway.	string	Maximum length: 79							
banner	Message that unity client should display after connecting.	var-string	Maximum length: 1024							
cert-id-validation	Enable/disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.</td></tr><tr><td><i>disable</i></td><td>Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.</td></tr></table>	Option	Description	<i>enable</i>	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	<i>disable</i>	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.			
	Option	Description								
	<i>enable</i>	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.								
<i>disable</i>	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.									
certificate <name>	The names of up to 4 signed personal certificates. Certificate name.	string	Maximum length: 79							
childless-ike	Enable/disable childless IKEv2 initiation (RFC 6023).	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable childless IKEv2 initiation (RFC 6023).</td></tr><tr><td><i>disable</i></td><td>Disable childless IKEv2 initiation (RFC 6023).</td></tr></table>	Option	Description	<i>enable</i>	Enable childless IKEv2 initiation (RFC 6023).	<i>disable</i>	Disable childless IKEv2 initiation (RFC 6023).			
	Option	Description								
	<i>enable</i>	Enable childless IKEv2 initiation (RFC 6023).								
<i>disable</i>	Disable childless IKEv2 initiation (RFC 6023).									
client-auto-negotiate	Enable/disable allowing the VPN client to bring up the tunnel when there is no traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr><tr><td><i>enable</i></td><td>Enable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr></table>	Option	Description	<i>disable</i>	Disable allowing the VPN client to bring up the tunnel when there is no traffic.	<i>enable</i>	Enable allowing the VPN client to bring up the tunnel when there is no traffic.			
	Option	Description								
	<i>disable</i>	Disable allowing the VPN client to bring up the tunnel when there is no traffic.								
<i>enable</i>	Enable allowing the VPN client to bring up the tunnel when there is no traffic.									
client-keep-alive	Enable/disable allowing the VPN client to keep the tunnel up when there is no traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr><tr><td><i>enable</i></td><td>Enable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr></table>	Option	Description	<i>disable</i>	Disable allowing the VPN client to keep the tunnel up when there is no traffic.	<i>enable</i>	Enable allowing the VPN client to keep the tunnel up when there is no traffic.			
	Option	Description								
	<i>disable</i>	Disable allowing the VPN client to keep the tunnel up when there is no traffic.								
<i>enable</i>	Enable allowing the VPN client to keep the tunnel up when there is no traffic.									
comments	Comment.	var-string	Maximum length: 255							
default-gw	IPv4 address of default route gateway to use for traffic exiting the interface.	ipv4-address	Not Specified	0.0.0.0						
default-gw-priority	Priority for default gateway route. A higher priority number signifies a less preferred route.	integer	Minimum value: 0 Maximum value: 4294967295	0						
dev-id	Device ID carried by the device ID notification.	string	Maximum length: 63							
dev-id-notification	Enable/disable device ID notification.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable device ID notification.</td></tr></table>	Option	Description	<i>disable</i>	Disable device ID notification.					
	Option	Description								
<i>disable</i>	Disable device ID notification.									

Parameter	Description	Type	Size	Default																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable device ID notification.</td></tr></table>	Option	Description	<i>enable</i>	Enable device ID notification.																																			
	Option	Description																																						
<i>enable</i>	Enable device ID notification.																																							
dhcp-ra-giaddr	Relay agent gateway IP address to use in the giaddr field of DHCP requests.	ipv4-address	Not Specified	0.0.0.0																																				
dhcp6-ra-linkaddr	Relay agent IPv6 link address to use in DHCP6 requests.	ipv6-address	Not Specified	::																																				
dhgrp	DH group.	option	-	14																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1</td><td>DH Group 1.</td></tr><tr><td>2</td><td>DH Group 2.</td></tr><tr><td>5</td><td>DH Group 5.</td></tr><tr><td>14</td><td>DH Group 14.</td></tr><tr><td>15</td><td>DH Group 15.</td></tr><tr><td>16</td><td>DH Group 16.</td></tr><tr><td>17</td><td>DH Group 17.</td></tr><tr><td>18</td><td>DH Group 18.</td></tr><tr><td>19</td><td>DH Group 19.</td></tr><tr><td>20</td><td>DH Group 20.</td></tr><tr><td>21</td><td>DH Group 21.</td></tr><tr><td>27</td><td>DH Group 27.</td></tr><tr><td>28</td><td>DH Group 28.</td></tr><tr><td>29</td><td>DH Group 29.</td></tr><tr><td>30</td><td>DH Group 30.</td></tr><tr><td>31</td><td>DH Group 31.</td></tr><tr><td>32</td><td>DH Group 32.</td></tr></table>	Option	Description	1	DH Group 1.	2	DH Group 2.	5	DH Group 5.	14	DH Group 14.	15	DH Group 15.	16	DH Group 16.	17	DH Group 17.	18	DH Group 18.	19	DH Group 19.	20	DH Group 20.	21	DH Group 21.	27	DH Group 27.	28	DH Group 28.	29	DH Group 29.	30	DH Group 30.	31	DH Group 31.	32	DH Group 32.			
	Option	Description																																						
	1	DH Group 1.																																						
	2	DH Group 2.																																						
	5	DH Group 5.																																						
	14	DH Group 14.																																						
	15	DH Group 15.																																						
	16	DH Group 16.																																						
	17	DH Group 17.																																						
	18	DH Group 18.																																						
	19	DH Group 19.																																						
	20	DH Group 20.																																						
	21	DH Group 21.																																						
	27	DH Group 27.																																						
	28	DH Group 28.																																						
	29	DH Group 29.																																						
	30	DH Group 30.																																						
	31	DH Group 31.																																						
32	DH Group 32.																																							
digital-signature-auth	Enable/disable IKEv2 Digital Signature Authentication (RFC 7427).	option	-	disable																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IKEv2 Digital Signature Authentication (RFC 7427).</td></tr><tr><td><i>disable</i></td><td>Disable IKEv2 Digital Signature Authentication (RFC 7427).</td></tr></table>	Option	Description	<i>enable</i>	Enable IKEv2 Digital Signature Authentication (RFC 7427).	<i>disable</i>	Disable IKEv2 Digital Signature Authentication (RFC 7427).																																	
	Option	Description																																						
	<i>enable</i>	Enable IKEv2 Digital Signature Authentication (RFC 7427).																																						
<i>disable</i>	Disable IKEv2 Digital Signature Authentication (RFC 7427).																																							

Parameter	Description	Type	Size	Default								
distance	Distance for routes added by IKE.	integer	Minimum value: 1 Maximum value: 255	15								
dns-mode	DNS server mode.	option	-	manual								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>manual</i></td><td>Manually configure DNS servers.</td></tr><tr><td><i>auto</i></td><td>Use default DNS servers.</td></tr></table>	Option	Description	<i>manual</i>	Manually configure DNS servers.	<i>auto</i>	Use default DNS servers.					
Option	Description											
<i>manual</i>	Manually configure DNS servers.											
<i>auto</i>	Use default DNS servers.											
domain	Instruct unity clients about the single default DNS domain.	string	Maximum length: 63									
dpd	Dead Peer Detection mode.	option	-	on-demand								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Dead Peer Detection.</td></tr><tr><td><i>on-idle</i></td><td>Trigger Dead Peer Detection when IPsec is idle.</td></tr><tr><td><i>on-demand</i></td><td>Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.</td></tr></table>	Option	Description	<i>disable</i>	Disable Dead Peer Detection.	<i>on-idle</i>	Trigger Dead Peer Detection when IPsec is idle.	<i>on-demand</i>	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.			
Option	Description											
<i>disable</i>	Disable Dead Peer Detection.											
<i>on-idle</i>	Trigger Dead Peer Detection when IPsec is idle.											
<i>on-demand</i>	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.											
dpd-retrycount	Number of DPD retry attempts.	integer	Minimum value: 0 Maximum value: 10	3								
dpd-retryinterval	DPD retry interval.	user	Not Specified									
eap	Enable/disable IKEv2 EAP authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IKEv2 EAP authentication.</td></tr><tr><td><i>disable</i></td><td>Disable IKEv2 EAP authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable IKEv2 EAP authentication.	<i>disable</i>	Disable IKEv2 EAP authentication.					
Option	Description											
<i>enable</i>	Enable IKEv2 EAP authentication.											
<i>disable</i>	Disable IKEv2 EAP authentication.											
eap-exclude-peergrp	Peer group excluded from EAP authentication.	string	Maximum length: 35									
eap-identity	IKEv2 EAP peer identity type.	option	-	use-id-payload								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>use-id-payload</i></td><td>Use IKEv2 IDi payload to resolve peer identity.</td></tr><tr><td><i>send-request</i></td><td>Use EAP identity request to resolve peer identity.</td></tr></table>	Option	Description	<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.	<i>send-request</i>	Use EAP identity request to resolve peer identity.					
Option	Description											
<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.											
<i>send-request</i>	Use EAP identity request to resolve peer identity.											

Parameter	Description	Type	Size	Default										
encap-local-gw4	Local IPv4 address of GRE/VXLAN tunnel.	ipv4-address	Not Specified	0.0.0.0										
encap-local-gw6	Local IPv6 address of GRE/VXLAN tunnel.	ipv6-address	Not Specified	::										
encap-remote-gw4	Remote IPv4 address of GRE/VXLAN tunnel.	ipv4-address	Not Specified	0.0.0.0										
encap-remote-gw6	Remote IPv6 address of GRE/VXLAN tunnel.	ipv6-address	Not Specified	::										
encapsulation	Enable/disable GRE/VXLAN/VPNID encapsulation.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No additional encapsulation.</td></tr><tr><td><i>gre</i></td><td>GRE encapsulation.</td></tr><tr><td><i>vxlan</i></td><td>VXLAN encapsulation.</td></tr><tr><td><i>vpn-id-ipip</i></td><td>VPN ID with IPIP encapsulation.</td></tr></table>	Option	Description	<i>none</i>	No additional encapsulation.	<i>gre</i>	GRE encapsulation.	<i>vxlan</i>	VXLAN encapsulation.	<i>vpn-id-ipip</i>	VPN ID with IPIP encapsulation.			
Option	Description													
<i>none</i>	No additional encapsulation.													
<i>gre</i>	GRE encapsulation.													
<i>vxlan</i>	VXLAN encapsulation.													
<i>vpn-id-ipip</i>	VPN ID with IPIP encapsulation.													
encapsulation-address	Source for GRE/VXLAN tunnel address.	option	-	ike										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ike</i></td><td>Use IKE/IPsec gateway addresses.</td></tr><tr><td><i>ipv4</i></td><td>Specify separate GRE/VXLAN tunnel address.</td></tr><tr><td><i>ipv6</i></td><td>Specify separate GRE/VXLAN tunnel address.</td></tr></table>	Option	Description	<i>ike</i>	Use IKE/IPsec gateway addresses.	<i>ipv4</i>	Specify separate GRE/VXLAN tunnel address.	<i>ipv6</i>	Specify separate GRE/VXLAN tunnel address.					
Option	Description													
<i>ike</i>	Use IKE/IPsec gateway addresses.													
<i>ipv4</i>	Specify separate GRE/VXLAN tunnel address.													
<i>ipv6</i>	Specify separate GRE/VXLAN tunnel address.													
enforce-unique-id	Enable/disable peer ID uniqueness check.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable peer ID uniqueness enforcement.</td></tr><tr><td><i>keep-new</i></td><td>Enforce peer ID uniqueness, keep new connection if collision found.</td></tr><tr><td><i>keep-old</i></td><td>Enforce peer ID uniqueness, keep old connection if collision found.</td></tr></table>	Option	Description	<i>disable</i>	Disable peer ID uniqueness enforcement.	<i>keep-new</i>	Enforce peer ID uniqueness, keep new connection if collision found.	<i>keep-old</i>	Enforce peer ID uniqueness, keep old connection if collision found.					
Option	Description													
<i>disable</i>	Disable peer ID uniqueness enforcement.													
<i>keep-new</i>	Enforce peer ID uniqueness, keep new connection if collision found.													
<i>keep-old</i>	Enforce peer ID uniqueness, keep old connection if collision found.													
esn *	Extended sequence number (ESN) negotiation.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>require</i></td><td>Require extended sequence number.</td></tr></table>	Option	Description	<i>require</i>	Require extended sequence number.									
Option	Description													
<i>require</i>	Require extended sequence number.													

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow extended sequence number.</td></tr><tr><td><i>disable</i></td><td>Disable extended sequence number.</td></tr></table>	Option	Description	<i>allow</i>	Allow extended sequence number.	<i>disable</i>	Disable extended sequence number.			
	Option	Description								
	<i>allow</i>	Allow extended sequence number.								
<i>disable</i>	Disable extended sequence number.									
exchange-fgt-device-id	Enable/disable device identifier exchange with peer FortiGate units for use of VPN monitor data by FortiManager.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable exchange of FortiGate device identifier.</td></tr><tr><td><i>disable</i></td><td>Disable exchange of FortiGate device identifier.</td></tr></table>	Option	Description	<i>enable</i>	Enable exchange of FortiGate device identifier.	<i>disable</i>	Disable exchange of FortiGate device identifier.			
	Option	Description								
	<i>enable</i>	Enable exchange of FortiGate device identifier.								
<i>disable</i>	Disable exchange of FortiGate device identifier.									
exchange-interface-ip	Enable/disable exchange of IPsec interface IP address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable exchange of IPsec interface IP address.</td></tr><tr><td><i>disable</i></td><td>Disable exchange of IPsec interface IP address.</td></tr></table>	Option	Description	<i>enable</i>	Enable exchange of IPsec interface IP address.	<i>disable</i>	Disable exchange of IPsec interface IP address.			
	Option	Description								
	<i>enable</i>	Enable exchange of IPsec interface IP address.								
<i>disable</i>	Disable exchange of IPsec interface IP address.									
exchange-ip-addr4	IPv4 address to exchange with peers.	ipv4-address	Not Specified	0.0.0.0						
exchange-ip-addr6	IPv6 address to exchange with peers.	ipv6-address	Not Specified	::						
fec-base	Number of base Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 20	10						
fec-codec	Forward Error Correction encoding/decoding algorithm.	option	-	rs						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rs</i></td><td>Reed-Solomon FEC algorithm.</td></tr><tr><td><i>xor</i></td><td>XOR FEC algorithm.</td></tr></table>	Option	Description	<i>rs</i>	Reed-Solomon FEC algorithm.	<i>xor</i>	XOR FEC algorithm.			
	Option	Description								
	<i>rs</i>	Reed-Solomon FEC algorithm.								
<i>xor</i>	XOR FEC algorithm.									
fec-egress	Enable/disable Forward Error Correction for egress IPsec traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Forward Error Correction for egress IPsec traffic.</td></tr><tr><td><i>disable</i></td><td>Disable Forward Error Correction for egress IPsec traffic.</td></tr></table>	Option	Description	<i>enable</i>	Enable Forward Error Correction for egress IPsec traffic.	<i>disable</i>	Disable Forward Error Correction for egress IPsec traffic.			
	Option	Description								
	<i>enable</i>	Enable Forward Error Correction for egress IPsec traffic.								
<i>disable</i>	Disable Forward Error Correction for egress IPsec traffic.									

Parameter	Description	Type	Size	Default						
fec-health-check	SD-WAN health check.	string	Maximum length: 35							
fec-ingress	Enable/disable Forward Error Correction for ingress IPsec traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Forward Error Correction for ingress IPsec traffic.</td></tr><tr><td><i>disable</i></td><td>Disable Forward Error Correction for ingress IPsec traffic.</td></tr></table>	Option	Description	<i>enable</i>	Enable Forward Error Correction for ingress IPsec traffic.	<i>disable</i>	Disable Forward Error Correction for ingress IPsec traffic.			
Option	Description									
<i>enable</i>	Enable Forward Error Correction for ingress IPsec traffic.									
<i>disable</i>	Disable Forward Error Correction for ingress IPsec traffic.									
fec-mapping-profile	Forward Error Correction (FEC) mapping profile.	string	Maximum length: 35							
fec-receive-timeout	Timeout in milliseconds before dropping Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 1000	50						
fec-redundant	Number of redundant Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 5	1						
fec-send-timeout	Timeout in milliseconds before sending Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 1000	5						
fgsp-sync	Enable/disable IPsec syncing of tunnels for FGSP IPsec.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec syncing of tunnels to other cluster members.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec syncing of tunnels to other cluster members.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPsec syncing of tunnels to other cluster members.	<i>disable</i>	Disable IPsec syncing of tunnels to other cluster members.			
Option	Description									
<i>enable</i>	Enable IPsec syncing of tunnels to other cluster members.									
<i>disable</i>	Disable IPsec syncing of tunnels to other cluster members.									
forticlient-enforcement	Enable/disable FortiClient enforcement.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiClient enforcement.</td></tr><tr><td><i>disable</i></td><td>Disable FortiClient enforcement.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiClient enforcement.	<i>disable</i>	Disable FortiClient enforcement.			
Option	Description									
<i>enable</i>	Enable FortiClient enforcement.									
<i>disable</i>	Disable FortiClient enforcement.									
fragmentation	Enable/disable fragment IKE message on re-transmission.	option	-	enable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable intra-IKE fragmentation support on re-transmission.		
	<i>disable</i>	Disable intra-IKE fragmentation support.		
fragmentation-mtu	IKE fragmentation MTU.	integer	Minimum value: 500 Maximum value: 16000	1200
group-authentication	Enable/disable IKEv2 IDi group authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IKEv2 IDi group authentication.		
	<i>disable</i>	Disable IKEv2 IDi group authentication.		
group-authentication-secret	Password for IKEv2 ID group authentication. ASCII string or hexadecimal indicated by a leading 0x.	password-3	Not Specified	
ha-sync-esp-seqno	Enable/disable sequence number jump ahead for IPsec HA.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable HA syncing of ESP sequence numbers.		
	<i>disable</i>	Disable HA syncing of ESP sequence numbers.		
idle-timeout	Enable/disable IPsec tunnel idle timeout.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IPsec tunnel idle timeout.		
	<i>disable</i>	Disable IPsec tunnel idle timeout.		
idle-timeoutinterval	IPsec tunnel idle timeout in minutes.	integer	Minimum value: 5 Maximum value: 43200	15
ike-version	IKE protocol version.	option	-	1
	<b>Option</b>	<b>Description</b>		
	1	Use IKEv1 protocol.		
	2	Use IKEv2 protocol.		

Parameter	Description	Type	Size	Default
inbound-dscp-copy	Enable/disable copy the dscp in the ESP header to the inner IP Header.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable copy the dscp in the ESP header to the inner IP Header.		
	<i>disable</i>	Disable copy the dscp in the ESP header to the inner IP Header.		
include-local-lan	Enable/disable allow local LAN access on unity clients.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable local LAN access on Unity clients.		
	<i>enable</i>	Enable local LAN access on Unity clients.		
interface	Local physical, aggregate, or VLAN outgoing interface.	string	Maximum length: 35	
ip-delay-interval	IP address reuse delay interval in seconds.	integer	Minimum value: 0 Maximum value: 28800	0
ip-fragmentation	Determine whether IP packets are fragmented before or after IPsec encapsulation.	option	-	post-encapsulation
	<b>Option</b>	<b>Description</b>		
	<i>pre-encapsulation</i>	Fragment before IPsec encapsulation.		
	<i>post-encapsulation</i>	Fragment after IPsec encapsulation (RFC compliant).		
ip-version	IP version to use for VPN interface.	option	-	4
	<b>Option</b>	<b>Description</b>		
	4	Use IPv4 addressing for gateways.		
	6	Use IPv6 addressing for gateways.		
ipv4-dns-server1	IPv4 DNS server 1.	ipv4-address	Not Specified	0.0.0.0
ipv4-dns-server2	IPv4 DNS server 2.	ipv4-address	Not Specified	0.0.0.0
ipv4-dns-server3	IPv4 DNS server 3.	ipv4-address	Not Specified	0.0.0.0
ipv4-end-ip	End of IPv4 range.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
ipv4-name	IPv4 address name.	string	Maximum length: 79	
ipv4-netmask	IPv4 Netmask.	ipv4-netmask	Not Specified	255.255.255.255
ipv4-split-exclude	IPv4 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79	
ipv4-split-include	IPv4 split-include subnets.	string	Maximum length: 79	
ipv4-start-ip	Start of IPv4 range.	ipv4-address	Not Specified	0.0.0.0
ipv4-wins-server1	WINS server 1.	ipv4-address	Not Specified	0.0.0.0
ipv4-wins-server2	WINS server 2.	ipv4-address	Not Specified	0.0.0.0
ipv6-dns-server1	IPv6 DNS server 1.	ipv6-address	Not Specified	::
ipv6-dns-server2	IPv6 DNS server 2.	ipv6-address	Not Specified	::
ipv6-dns-server3	IPv6 DNS server 3.	ipv6-address	Not Specified	::
ipv6-end-ip	End of IPv6 range.	ipv6-address	Not Specified	::
ipv6-name	IPv6 address name.	string	Maximum length: 79	
ipv6-prefix	IPv6 prefix.	integer	Minimum value: 1 Maximum value: 128	128
ipv6-split-exclude	IPv6 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79	
ipv6-split-include	IPv6 split-include subnets.	string	Maximum length: 79	
ipv6-start-ip	Start of IPv6 range.	ipv6-address	Not Specified	::
keepalive	NAT-T keep alive interval.	integer	Minimum value: 10 Maximum value: 900	10
keylife	Time to wait in seconds before phase 1 encryption key expires.	integer	Minimum value: 120 Maximum value: 172800	86400

Parameter	Description	Type	Size	Default														
link-cost	VPN tunnel underlay link cost.	integer	Minimum value: 0 Maximum value: 255	0														
local-gw	IPv4 address of the local gateway's external interface.	ipv4-address	Not Specified	0.0.0.0														
local-gw6	IPv6 address of the local gateway's external interface.	ipv6-address	Not Specified	::														
localid	Local ID.	string	Maximum length: 63															
localid-type	Local ID type.	option	-	auto														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Select ID type automatically.</td></tr><tr><td><i>fqdn</i></td><td>Use fully qualified domain name.</td></tr><tr><td><i>user-fqdn</i></td><td>Use user fully qualified domain name.</td></tr><tr><td><i>keyid</i></td><td>Use key-id string.</td></tr><tr><td><i>address</i></td><td>Use local IP address.</td></tr><tr><td><i>asn1dn</i></td><td>Use ASN.1 distinguished name.</td></tr></table>				Option	Description	<i>auto</i>	Select ID type automatically.	<i>fqdn</i>	Use fully qualified domain name.	<i>user-fqdn</i>	Use user fully qualified domain name.	<i>keyid</i>	Use key-id string.	<i>address</i>	Use local IP address.	<i>asn1dn</i>	Use ASN.1 distinguished name.
Option	Description																	
<i>auto</i>	Select ID type automatically.																	
<i>fqdn</i>	Use fully qualified domain name.																	
<i>user-fqdn</i>	Use user fully qualified domain name.																	
<i>keyid</i>	Use key-id string.																	
<i>address</i>	Use local IP address.																	
<i>asn1dn</i>	Use ASN.1 distinguished name.																	
loopback-asmroute	Enable/disable asymmetric routing for IKE traffic on loopback interface.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow ingress/egress IKE traffic to be routed over different interfaces.</td></tr><tr><td><i>disable</i></td><td>Ingress/egress IKE traffic must be routed over the same interface.</td></tr></table>				Option	Description	<i>enable</i>	Allow ingress/egress IKE traffic to be routed over different interfaces.	<i>disable</i>	Ingress/egress IKE traffic must be routed over the same interface.								
Option	Description																	
<i>enable</i>	Allow ingress/egress IKE traffic to be routed over different interfaces.																	
<i>disable</i>	Ingress/egress IKE traffic must be routed over the same interface.																	
mesh-selector-type	Add selectors containing subsets of the configuration depending on traffic.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>subnet</i></td><td>Enable addition of matching subnet selector.</td></tr><tr><td><i>host</i></td><td>Enable addition of host to host selector.</td></tr></table>				Option	Description	<i>disable</i>	Disable.	<i>subnet</i>	Enable addition of matching subnet selector.	<i>host</i>	Enable addition of host to host selector.						
Option	Description																	
<i>disable</i>	Disable.																	
<i>subnet</i>	Enable addition of matching subnet selector.																	
<i>host</i>	Enable addition of host to host selector.																	
mode	The ID protection mode used to establish a secure channel.	option	-	main														

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>aggressive</i>	Aggressive mode.		
	<i>main</i>	Main mode.		
mode-cfg	Enable/disable configuration method.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable Configuration Method.		
	<i>enable</i>	Enable Configuration Method.		
mode-cfg-allow-client-selector	Enable/disable mode-cfg client to use custom phase2 selectors.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Mode-cfg client to use wildcard selectors.		
	<i>enable</i>	Mode-cfg client to use custom selectors.		
monitor	IPsec interface as backup for primary interface.	string	Maximum length: 35	
monitor-hold-down-delay	Time to wait in seconds before recovery once primary re-establishes.	integer	Minimum value: 0 Maximum value: 31536000	0
monitor-hold-down-time	Time of day at which to fail back to primary after it re-establishes.	user	Not Specified	
monitor-hold-down-type	Recovery time method when primary interface re-establishes.	option	-	immediate
	<b>Option</b>	<b>Description</b>		
	<i>immediate</i>	Fail back immediately after primary recovers.		
	<i>delay</i>	Number of seconds to delay fail back after primary recovers.		
	<i>time</i>	Specify a time at which to fail back after primary recovers.		
monitor-hold-down-weekday	Day of the week to recover once primary re-establishes.	option	-	sunday
	<b>Option</b>	<b>Description</b>		
	<i>everyday</i>	Every Day.		

Parameter	Description	Type	Size	Default
	<div><div>Option</div><div>Description</div></div>			
	<i>sunday</i>	Sunday.		
	<i>monday</i>	Monday.		
	<i>tuesday</i>	Tuesday.		
	<i>wednesday</i>	Wednesday.		
	<i>thursday</i>	Thursday.		
	<i>friday</i>	Friday.		
	<i>saturday</i>	Saturday.		
name	IPsec remote gateway name.	string	Maximum length: 15	
nattraversal	Enable/disable NAT traversal.	option	-	enable
	<div><div>Option</div><div>Description</div></div>			
	<i>enable</i>	Enable IPsec NAT traversal.		
	<i>disable</i>	Disable IPsec NAT traversal.		
	<i>forced</i>	Force IPsec NAT traversal on.		
negotiate-timeout	IKE SA negotiation timeout in seconds.	integer	Minimum value: 1 Maximum value: 300	30
net-device	Enable/disable kernel device creation.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	<i>enable</i>	Create a kernel device for every tunnel.		
	<i>disable</i>	Do not create a kernel device for tunnels.		
network-id	VPN gateway network ID.	integer	Minimum value: 0 Maximum value: 255	0
network-overlay	Enable/disable network overlays.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	<i>disable</i>	Disable network overlays.		
	<i>enable</i>	Enable network overlays.		

Parameter	Description	Type	Size	Default
npu-offload *	Enable/disable offloading NPU.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NPU offloading.		
	<i>disable</i>	Disable NPU offloading.		
packet-redistribution *	Enable/disable packet distribution (RPS) on the IPsec interface.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable packet redistribution.		
	<i>disable</i>	Disable packet redistribution.		
passive-mode	Enable/disable IPsec passive mode for static tunnels.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IPsec passive mode.		
	<i>disable</i>	Disable IPsec passive mode.		
peer	Accept this peer certificate.	string	Maximum length: 35	
peergrp	Accept this peer certificate group.	string	Maximum length: 35	
peerid	Accept this peer identity.	string	Maximum length: 255	
peertype	Accept this peer type.	option	-	peer
	<b>Option</b>	<b>Description</b>		
	<i>any</i>	Accept any peer ID.		
	<i>one</i>	Accept this peer ID.		
	<i>dialup</i>	Accept peer ID in dialup group.		
	<i>peer</i>	Accept this peer certificate.		
	<i>peergrp</i>	Accept this peer certificate group.		
ppk	Enable/disable IKEv2 Postquantum Preshared Key (PPK).	option	-	disable

Parameter	Description	Type	Size	Default																																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>allow</i></td><td>Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>require</i></td><td>Require use of IKEv2 Postquantum Preshared Key (PPK).</td></tr></table>	Option	Description	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).	<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).																													
	Option	Description																																				
	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).																																				
	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).																																				
<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).																																					
ppk-identity	IKEv2 Postquantum Preshared Key Identity.	string	Maximum length: 35																																			
ppk-secret	IKEv2 Postquantum Preshared Key (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified																																			
priority	Priority for routes added by IKE.	integer	Minimum value: 1 Maximum value: 65535	1																																		
proposal	Phase1 proposal.	option	-																																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>des-md5</i></td><td>des-md5</td></tr><tr><td><i>des-sha1</i></td><td>des-sha1</td></tr><tr><td><i>des-sha256</i></td><td>des-sha256</td></tr><tr><td><i>des-sha384</i></td><td>des-sha384</td></tr><tr><td><i>des-sha512</i></td><td>des-sha512</td></tr><tr><td><i>3des-md5</i></td><td>3des-md5</td></tr><tr><td><i>3des-sha1</i></td><td>3des-sha1</td></tr><tr><td><i>3des-sha256</i></td><td>3des-sha256</td></tr><tr><td><i>3des-sha384</i></td><td>3des-sha384</td></tr><tr><td><i>3des-sha512</i></td><td>3des-sha512</td></tr><tr><td><i>aes128-md5</i></td><td>aes128-md5</td></tr><tr><td><i>aes128-sha1</i></td><td>aes128-sha1</td></tr><tr><td><i>aes128-sha256</i></td><td>aes128-sha256</td></tr><tr><td><i>aes128-sha384</i></td><td>aes128-sha384</td></tr><tr><td><i>aes128-sha512</i></td><td>aes128-sha512</td></tr><tr><td><i>aes128gcm-prfsha1</i></td><td>aes128gcm-prfsha1</td></tr></table>	Option	Description	<i>des-md5</i>	des-md5	<i>des-sha1</i>	des-sha1	<i>des-sha256</i>	des-sha256	<i>des-sha384</i>	des-sha384	<i>des-sha512</i>	des-sha512	<i>3des-md5</i>	3des-md5	<i>3des-sha1</i>	3des-sha1	<i>3des-sha256</i>	3des-sha256	<i>3des-sha384</i>	3des-sha384	<i>3des-sha512</i>	3des-sha512	<i>aes128-md5</i>	aes128-md5	<i>aes128-sha1</i>	aes128-sha1	<i>aes128-sha256</i>	aes128-sha256	<i>aes128-sha384</i>	aes128-sha384	<i>aes128-sha512</i>	aes128-sha512	<i>aes128gcm-prfsha1</i>	aes128gcm-prfsha1

	<i>enable</i>	Enable phase1 rekey.																													
<i>disable</i>	Disable phase1 rekey.																														
remote-gw	IPv4 address of the remote gateway's external interface.	ipv4-address	Not Specified	0.0.0.0																											

Parameter	Description	Type	Size	Default										
remote-gw6	IPv6 address of the remote gateway's external interface.	ipv6-address	Not Specified	::										
remotegw-ddns	Domain name of remote gateway. For example, name.ddns.com.	string	Maximum length: 63											
rsa-signature-format	Digital Signature Authentication RSA signature format.	option	-	pkcs1										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>pkcs1</td><td>RSASSA PKCS#1 v1.5.</td></tr><tr><td>pss</td><td>RSASSA Probabilistic Signature Scheme (PSS).</td></tr></table>	Option	Description	pkcs1	RSASSA PKCS#1 v1.5.	pss	RSASSA Probabilistic Signature Scheme (PSS).							
Option	Description													
pkcs1	RSASSA PKCS#1 v1.5.													
pss	RSASSA Probabilistic Signature Scheme (PSS).													
rsa-signature-hash-override	Enable/disable IKEv2 RSA signature hash algorithm override.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 RSA signature hash algorithm override.</td></tr><tr><td>disable</td><td>Disable IKEv2 RSA signature hash algorithm override.</td></tr></table>	Option	Description	enable	Enable IKEv2 RSA signature hash algorithm override.	disable	Disable IKEv2 RSA signature hash algorithm override.							
Option	Description													
enable	Enable IKEv2 RSA signature hash algorithm override.													
disable	Disable IKEv2 RSA signature hash algorithm override.													
save-password	Enable/disable saving XAuth username and password on VPN clients.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable saving XAuth username and password on VPN clients.</td></tr><tr><td>enable</td><td>Enable saving XAuth username and password on VPN clients.</td></tr></table>	Option	Description	disable	Disable saving XAuth username and password on VPN clients.	enable	Enable saving XAuth username and password on VPN clients.							
Option	Description													
disable	Disable saving XAuth username and password on VPN clients.													
enable	Enable saving XAuth username and password on VPN clients.													
send-cert-chain	Enable/disable sending certificate chain.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable sending certificate chain.</td></tr><tr><td>disable</td><td>Disable sending certificate chain.</td></tr></table>	Option	Description	enable	Enable sending certificate chain.	disable	Disable sending certificate chain.							
Option	Description													
enable	Enable sending certificate chain.													
disable	Disable sending certificate chain.													
signature-hash-alg	Digital Signature Authentication hash algorithms.	option	-	sha2-512										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>sha1</td><td>SHA1.</td></tr><tr><td>sha2-256</td><td>SHA2-256.</td></tr><tr><td>sha2-384</td><td>SHA2-384.</td></tr><tr><td>sha2-512</td><td>SHA2-512.</td></tr></table>	Option	Description	sha1	SHA1.	sha2-256	SHA2-256.	sha2-384	SHA2-384.	sha2-512	SHA2-512.			
Option	Description													
sha1	SHA1.													
sha2-256	SHA2-256.													
sha2-384	SHA2-384.													
sha2-512	SHA2-512.													

Parameter	Description	Type	Size	Default										
split-include-service	Split-include services.	string	Maximum length: 79											
suite-b	Use Suite-B.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not use UI suite.</td></tr><tr><td><i>suite-b-gcm-128</i></td><td>Use Suite-B-GCM-128.</td></tr><tr><td><i>suite-b-gcm-256</i></td><td>Use Suite-B-GCM-256.</td></tr></table>				Option	Description	<i>disable</i>	Do not use UI suite.	<i>suite-b-gcm-128</i>	Use Suite-B-GCM-128.	<i>suite-b-gcm-256</i>	Use Suite-B-GCM-256.		
	Option	Description												
	<i>disable</i>	Do not use UI suite.												
	<i>suite-b-gcm-128</i>	Use Suite-B-GCM-128.												
	<i>suite-b-gcm-256</i>	Use Suite-B-GCM-256.												
type	Remote gateway type.	option	-	static										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Remote VPN gateway has fixed IP address.</td></tr><tr><td><i>dynamic</i></td><td>Remote VPN gateway has dynamic IP address.</td></tr><tr><td><i>ddns</i></td><td>Remote VPN gateway has dynamic IP address and is a dynamic DNS client.</td></tr></table>				Option	Description	<i>static</i>	Remote VPN gateway has fixed IP address.	<i>dynamic</i>	Remote VPN gateway has dynamic IP address.	<i>ddns</i>	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.		
	Option	Description												
	<i>static</i>	Remote VPN gateway has fixed IP address.												
	<i>dynamic</i>	Remote VPN gateway has dynamic IP address.												
	<i>ddns</i>	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.												
unity-support	Enable/disable support for Cisco UNITY Configuration Method extensions.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Cisco Unity Configuration Method Extensions.</td></tr><tr><td><i>enable</i></td><td>Enable Cisco Unity Configuration Method Extensions.</td></tr></table>				Option	Description	<i>disable</i>	Disable Cisco Unity Configuration Method Extensions.	<i>enable</i>	Enable Cisco Unity Configuration Method Extensions.				
	Option	Description												
	<i>disable</i>	Disable Cisco Unity Configuration Method Extensions.												
	<i>enable</i>	Enable Cisco Unity Configuration Method Extensions.												
usrgrp	User group name for dialup peers.	string	Maximum length: 35											
vni	VNI of VXLAN tunnel.	integer	Minimum value: 1 Maximum value: 16777215	0										
wizard-type	GUI VPN Wizard Type.	option	-	custom										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>custom</i></td><td>Custom VPN configuration.</td></tr><tr><td><i>dialup-forticlient</i></td><td>Dial Up - FortiClient Windows, Mac and Android.</td></tr><tr><td><i>dialup-ios</i></td><td>Dial Up - iPhone / iPad Native IPsec Client.</td></tr><tr><td><i>dialup-android</i></td><td>Dial Up - Android Native IPsec Client.</td></tr></table>				Option	Description	<i>custom</i>	Custom VPN configuration.	<i>dialup-forticlient</i>	Dial Up - FortiClient Windows, Mac and Android.	<i>dialup-ios</i>	Dial Up - iPhone / iPad Native IPsec Client.	<i>dialup-android</i>	Dial Up - Android Native IPsec Client.
	Option	Description												
	<i>custom</i>	Custom VPN configuration.												
	<i>dialup-forticlient</i>	Dial Up - FortiClient Windows, Mac and Android.												
	<i>dialup-ios</i>	Dial Up - iPhone / iPad Native IPsec Client.												
<i>dialup-android</i>	Dial Up - Android Native IPsec Client.													

Parameter	Description	Type	Size	Default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dialup-windows</i></td><td>Dial Up - Windows Native IPsec Client.</td></tr><tr><td><i>dialup-cisco</i></td><td>Dial Up - Cisco IPsec Client.</td></tr><tr><td><i>static-fortigate</i></td><td>Site to Site - FortiGate.</td></tr><tr><td><i>dialup-fortigate</i></td><td>Dial Up - FortiGate.</td></tr><tr><td><i>static-cisco</i></td><td>Site to Site - Cisco.</td></tr><tr><td><i>dialup-cisco-fw</i></td><td>Dialup Up - Cisco Firewall.</td></tr><tr><td><i>simplified-static-fortigate</i></td><td>Site to Site - FortiGate (SD-WAN).</td></tr><tr><td><i>hub-fortigate-auto-discovery</i></td><td>Hub role in a Hub-and-Spoke auto-discovery VPN.</td></tr><tr><td><i>spoke-fortigate-auto-discovery</i></td><td>Spoke role in a Hub-and-Spoke auto-discovery VPN.</td></tr></table>	Option	Description	<i>dialup-windows</i>	Dial Up - Windows Native IPsec Client.	<i>dialup-cisco</i>	Dial Up - Cisco IPsec Client.	<i>static-fortigate</i>	Site to Site - FortiGate.	<i>dialup-fortigate</i>	Dial Up - FortiGate.	<i>static-cisco</i>	Site to Site - Cisco.	<i>dialup-cisco-fw</i>	Dialup Up - Cisco Firewall.	<i>simplified-static-fortigate</i>	Site to Site - FortiGate (SD-WAN).	<i>hub-fortigate-auto-discovery</i>	Hub role in a Hub-and-Spoke auto-discovery VPN.	<i>spoke-fortigate-auto-discovery</i>	Spoke role in a Hub-and-Spoke auto-discovery VPN.			
	Option	Description																						
	<i>dialup-windows</i>	Dial Up - Windows Native IPsec Client.																						
	<i>dialup-cisco</i>	Dial Up - Cisco IPsec Client.																						
	<i>static-fortigate</i>	Site to Site - FortiGate.																						
	<i>dialup-fortigate</i>	Dial Up - FortiGate.																						
	<i>static-cisco</i>	Site to Site - Cisco.																						
	<i>dialup-cisco-fw</i>	Dialup Up - Cisco Firewall.																						
	<i>simplified-static-fortigate</i>	Site to Site - FortiGate (SD-WAN).																						
	<i>hub-fortigate-auto-discovery</i>	Hub role in a Hub-and-Spoke auto-discovery VPN.																						
<i>spoke-fortigate-auto-discovery</i>	Spoke role in a Hub-and-Spoke auto-discovery VPN.																							
xauthtype	XAuth type.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>client</i></td><td>Enable as client.</td></tr><tr><td><i>pap</i></td><td>Enable as server PAP.</td></tr><tr><td><i>chap</i></td><td>Enable as server CHAP.</td></tr><tr><td><i>auto</i></td><td>Enable as server auto.</td></tr></table>	Option	Description	<i>disable</i>	Disable.	<i>client</i>	Enable as client.	<i>pap</i>	Enable as server PAP.	<i>chap</i>	Enable as server CHAP.	<i>auto</i>	Enable as server auto.											
	Option	Description																						
	<i>disable</i>	Disable.																						
	<i>client</i>	Enable as client.																						
	<i>pap</i>	Enable as server PAP.																						
	<i>chap</i>	Enable as server CHAP.																						
<i>auto</i>	Enable as server auto.

## config vpn ipsec phase1

Parameter	Description	Type	Size	Default
acct-verify	Enable/disable verification of RADIUS accounting record.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable verification of RADIUS accounting record.		
	<i>disable</i>	Disable verification of RADIUS accounting record.		
add-gw-route	Enable/disable automatically add a route to the remote gateway.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Automatically add a route to the remote gateway.		
	<i>disable</i>	Do not automatically add a route to the remote gateway.		
add-route	Enable/disable control addition of a route to peer destination selector.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Do not add a route to destination of peer selector.		
	<i>enable</i>	Add route to destination of peer selector.		
assign-ip	Enable/disable assignment of IP to IPsec interface via configuration method.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Do not assign an IP address to the IPsec interface.		
	<i>enable</i>	Assign an IP address to the IPsec interface.		
assign-ip-from	Method by which the IP address will be assigned.	option	-	range
	<b>Option</b>	<b>Description</b>		
	<i>range</i>	Assign IP address from locally defined range.		
	<i>usrgrp</i>	Assign IP address via user group.		
	<i>dhcp</i>	Assign IP address via DHCP.		
	<i>name</i>	Assign IP address from firewall address or group.		
authmethod	Authentication method.	option	-	psk
	<b>Option</b>	<b>Description</b>		
	<i>psk</i>	PSK authentication method.		
	<i>signature</i>	Signature authentication method.		

Parameter	Description	Type	Size	Default						
authmethod-remote	Authentication method (remote side).	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>psk</i></td><td>PSK authentication method.</td></tr><tr><td><i>signature</i></td><td>Signature authentication method.</td></tr></table>	Option	Description	<i>psk</i>	PSK authentication method.	<i>signature</i>	Signature authentication method.			
Option	Description									
<i>psk</i>	PSK authentication method.									
<i>signature</i>	Signature authentication method.									
authpasswd	XAuth password (max 35 characters).	password	Not Specified							
authusr	XAuth user name.	string	Maximum length: 64							
authusgrp	Authentication user group.	string	Maximum length: 35							
auto-negotiate	Enable/disable automatic initiation of IKE SA negotiation.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic initiation of IKE SA negotiation.</td></tr><tr><td><i>disable</i></td><td>Disable automatic initiation of IKE SA negotiation.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic initiation of IKE SA negotiation.	<i>disable</i>	Disable automatic initiation of IKE SA negotiation.			
Option	Description									
<i>enable</i>	Enable automatic initiation of IKE SA negotiation.									
<i>disable</i>	Disable automatic initiation of IKE SA negotiation.									
backup-gateway <address>	Instruct unity clients about the backup gateway address(es). Address of backup gateway.	string	Maximum length: 79							
banner	Message that unity client should display after connecting.	var-string	Maximum length: 1024							
cert-id-validation	Enable/disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.</td></tr><tr><td><i>disable</i></td><td>Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.</td></tr></table>	Option	Description	<i>enable</i>	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	<i>disable</i>	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.			
Option	Description									
<i>enable</i>	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.									
<i>disable</i>	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.									
certificate <name>	Names of up to 4 signed personal certificates. Certificate name.	string	Maximum length: 79							
childless-ike	Enable/disable childless IKEv2 initiation (RFC 6023).	option	-	disable						

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable childless IKEv2 initiation (RFC 6023).</td></tr><tr><td><i>disable</i></td><td>Disable childless IKEv2 initiation (RFC 6023).</td></tr></table>	Option	Description	<i>enable</i>	Enable childless IKEv2 initiation (RFC 6023).	<i>disable</i>	Disable childless IKEv2 initiation (RFC 6023).											
Option	Description																	
<i>enable</i>	Enable childless IKEv2 initiation (RFC 6023).																	
<i>disable</i>	Disable childless IKEv2 initiation (RFC 6023).																	
client-auto-negotiate	Enable/disable allowing the VPN client to bring up the tunnel when there is no traffic.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr><tr><td><i>enable</i></td><td>Enable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr></table>	Option	Description	<i>disable</i>	Disable allowing the VPN client to bring up the tunnel when there is no traffic.	<i>enable</i>	Enable allowing the VPN client to bring up the tunnel when there is no traffic.											
Option	Description																	
<i>disable</i>	Disable allowing the VPN client to bring up the tunnel when there is no traffic.																	
<i>enable</i>	Enable allowing the VPN client to bring up the tunnel when there is no traffic.																	
client-keep-alive	Enable/disable allowing the VPN client to keep the tunnel up when there is no traffic.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr><tr><td><i>enable</i></td><td>Enable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr></table>	Option	Description	<i>disable</i>	Disable allowing the VPN client to keep the tunnel up when there is no traffic.	<i>enable</i>	Enable allowing the VPN client to keep the tunnel up when there is no traffic.											
Option	Description																	
<i>disable</i>	Disable allowing the VPN client to keep the tunnel up when there is no traffic.																	
<i>enable</i>	Enable allowing the VPN client to keep the tunnel up when there is no traffic.																	
comments	Comment.	var-string	Maximum length: 255															
dhcp-ra-giaddr	Relay agent gateway IP address to use in the giaddr field of DHCP requests.	ipv4-address	Not Specified	0.0.0.0														
dhcp6-ra-linkaddr	Relay agent IPv6 link address to use in DHCP6 requests.	ipv6-address	Not Specified	::														
dhgrp	DH group.	option	-	14														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1</td><td>DH Group 1.</td></tr><tr><td>2</td><td>DH Group 2.</td></tr><tr><td>5</td><td>DH Group 5.</td></tr><tr><td>14</td><td>DH Group 14.</td></tr><tr><td>15</td><td>DH Group 15.</td></tr><tr><td>16</td><td>DH Group 16.</td></tr></table>	Option	Description	1	DH Group 1.	2	DH Group 2.	5	DH Group 5.	14	DH Group 14.	15	DH Group 15.	16	DH Group 16.			
Option	Description																	
1	DH Group 1.																	
2	DH Group 2.																	
5	DH Group 5.

	Option	Description																										
	17	DH Group 17.																										
	18	DH Group 18.																										
	19	DH Group 19.																										
	20	DH Group 20.																										
	21	DH Group 21.																										
	27	DH Group 27.																										
	28	DH Group 28.																										
	29	DH Group 29.																										
	30	DH Group 30.																										
	31	DH Group 31.																										
	32	DH Group 32.																										
digital-signature-auth	Enable/disable IKEv2 Digital Signature Authentication (RFC 7427).	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 Digital Signature Authentication (RFC 7427).</td></tr><tr><td>disable</td><td>Disable IKEv2 Digital Signature Authentication (RFC 7427).</td></tr></table>	Option	Description	enable	Enable IKEv2 Digital Signature Authentication (RFC 7427).	disable	Disable IKEv2 Digital Signature Authentication (RFC 7427).																					
	Option	Description																										
	enable	Enable IKEv2 Digital Signature Authentication (RFC 7427).																										
disable	Disable IKEv2 Digital Signature Authentication (RFC 7427).																											
distance	Distance for routes added by IKE.	integer	Minimum value: 1 Maximum value: 255	15																								
dns-mode	DNS server mode.	option	-	manual																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>manual</td><td>Manually configure DNS servers.</td></tr><tr><td>auto</td><td>Use default DNS servers.</td></tr></table>	Option	Description	manual	Manually configure DNS servers.	auto	Use default DNS servers.																					
	Option	Description																										
	manual	Manually configure DNS servers.																										
auto	Use default DNS servers.																											
domain	Instruct unity clients about the single default DNS domain.	string	Maximum length: 63																									
dpd	Dead Peer Detection mode.	option	-	on-demand																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable Dead Peer Detection.</td></tr></table>	Option	Description	disable	Disable Dead Peer Detection.																							
	Option	Description																										
disable	Disable Dead Peer Detection.																											

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>on-idle</i>	Trigger Dead Peer Detection when IPsec is idle.		
	<i>on-demand</i>	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.		
dpd-retrycount	Number of DPD retry attempts.	integer	Minimum value: 0 Maximum value: 10	3
dpd-retryinterval	DPD retry interval.	user	Not Specified	
eap	Enable/disable IKEv2 EAP authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable IKEv2 EAP authentication.		
	<i>disable</i>	Disable IKEv2 EAP authentication.		
eap-exclude-peergrp	Peer group excluded from EAP authentication.	string	Maximum length: 35	
eap-identity	IKEv2 EAP peer identity type.	option	-	use-id-payload
	<b>Option</b>	<b>Description</b>		
	<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.		
	<i>send-request</i>	Use EAP identity request to resolve peer identity.		
enforce-unique-id	Enable/disable peer ID uniqueness check.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable peer ID uniqueness enforcement.		
	<i>keep-new</i>	Enforce peer ID uniqueness, keep new connection if collision found.		
	<i>keep-old</i>	Enforce peer ID uniqueness, keep old connection if collision found.		
esn *	Extended sequence number (ESN) negotiation.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>require</i>	Require extended sequence number.		

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow extended sequence number.</td></tr><tr><td><i>disable</i></td><td>Disable extended sequence number.</td></tr></table>				Option	Description	<i>allow</i>	Allow extended sequence number.	<i>disable</i>	Disable extended sequence number.
	Option	Description								
	<i>allow</i>	Allow extended sequence number.								
<i>disable</i>	Disable extended sequence number.									
fec-base	Number of base Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 20	10						
fec-codec	Forward Error Correction encoding/decoding algorithm.	option	-	rs						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rs</i></td><td>Reed-Solomon FEC algorithm.</td></tr><tr><td><i>xor</i></td><td>XOR FEC algorithm.</td></tr></table>				Option	Description	<i>rs</i>	Reed-Solomon FEC algorithm.	<i>xor</i>	XOR FEC algorithm.
	Option	Description								
	<i>rs</i>	Reed-Solomon FEC algorithm.								
<i>xor</i>	XOR FEC algorithm.									
fec-egress	Enable/disable Forward Error Correction for egress IPsec traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Forward Error Correction for egress IPsec traffic.</td></tr><tr><td><i>disable</i></td><td>Disable Forward Error Correction for egress IPsec traffic.</td></tr></table>				Option	Description	<i>enable</i>	Enable Forward Error Correction for egress IPsec traffic.	<i>disable</i>	Disable Forward Error Correction for egress IPsec traffic.
	Option	Description								
	<i>enable</i>	Enable Forward Error Correction for egress IPsec traffic.								
<i>disable</i>	Disable Forward Error Correction for egress IPsec traffic.									
fec-health-check	SD-WAN health check.	string	Maximum length: 35							
fec-ingress	Enable/disable Forward Error Correction for ingress IPsec traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Forward Error Correction for ingress IPsec traffic.</td></tr><tr><td><i>disable</i></td><td>Disable Forward Error Correction for ingress IPsec traffic.</td></tr></table>				Option	Description	<i>enable</i>	Enable Forward Error Correction for ingress IPsec traffic.	<i>disable</i>	Disable Forward Error Correction for ingress IPsec traffic.
	Option	Description								
	<i>enable</i>	Enable Forward Error Correction for ingress IPsec traffic.								
<i>disable</i>	Disable Forward Error Correction for ingress IPsec traffic.									
fec-mapping-profile	Forward Error Correction (FEC) mapping profile.	string	Maximum length: 35							
fec-receive-timeout	Timeout in milliseconds before dropping Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 1000	50						

Parameter	Description	Type	Size	Default						
fec-redundant	Number of redundant Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 5	1						
fec-send-timeout	Timeout in milliseconds before sending Forward Error Correction packets.	integer	Minimum value: 1 Maximum value: 1000	5						
fgsp-sync	Enable/disable IPsec syncing of tunnels for FGSP IPsec.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IPsec syncing of tunnels to other cluster members.</td></tr><tr><td>disable</td><td>Disable IPsec syncing of tunnels to other cluster members.</td></tr></table>				Option	Description	enable	Enable IPsec syncing of tunnels to other cluster members.	disable	Disable IPsec syncing of tunnels to other cluster members.
Option	Description									
enable	Enable IPsec syncing of tunnels to other cluster members.									
disable	Disable IPsec syncing of tunnels to other cluster members.									
forticlient-enforcement	Enable/disable FortiClient enforcement.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiClient enforcement.</td></tr><tr><td>disable</td><td>Disable FortiClient enforcement.</td></tr></table>				Option	Description	enable	Enable FortiClient enforcement.	disable	Disable FortiClient enforcement.
Option	Description									
enable	Enable FortiClient enforcement.									
disable	Disable FortiClient enforcement.									
fragmentation	Enable/disable fragment IKE message on re-transmission.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable intra-IKE fragmentation support on re-transmission.</td></tr><tr><td>disable</td><td>Disable intra-IKE fragmentation support.</td></tr></table>				Option	Description	enable	Enable intra-IKE fragmentation support on re-transmission.	disable	Disable intra-IKE fragmentation support.
Option	Description									
enable	Enable intra-IKE fragmentation support on re-transmission.									
disable	Disable intra-IKE fragmentation support.									
fragmentation-mtu	IKE fragmentation MTU.	integer	Minimum value: 500 Maximum value: 16000	1200						
group-authentication	Enable/disable IKEv2 IDi group authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 IDi group authentication.</td></tr><tr><td>disable</td><td>Disable IKEv2 IDi group authentication.</td></tr></table>				Option	Description	enable	Enable IKEv2 IDi group authentication.	disable	Disable IKEv2 IDi group authentication.
Option	Description									
enable	Enable IKEv2 IDi group authentication.									
disable	Disable IKEv2 IDi group authentication.									

Parameter	Description	Type	Size	Default						
group-authentication-secret	Password for IKEv2 ID group authentication. ASCII string or hexadecimal indicated by a leading 0x.	password-3	Not Specified							
ha-sync-esp-seqno	Enable/disable sequence number jump ahead for IPsec HA.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable HA syncing of ESP sequence numbers.</td></tr><tr><td>disable</td><td>Disable HA syncing of ESP sequence numbers.</td></tr></table>	Option	Description	enable	Enable HA syncing of ESP sequence numbers.	disable	Disable HA syncing of ESP sequence numbers.			
Option	Description									
enable	Enable HA syncing of ESP sequence numbers.									
disable	Disable HA syncing of ESP sequence numbers.									
idle-timeout	Enable/disable IPsec tunnel idle timeout.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IPsec tunnel idle timeout.</td></tr><tr><td>disable</td><td>Disable IPsec tunnel idle timeout.</td></tr></table>	Option	Description	enable	Enable IPsec tunnel idle timeout.	disable	Disable IPsec tunnel idle timeout.			
Option	Description									
enable	Enable IPsec tunnel idle timeout.									
disable	Disable IPsec tunnel idle timeout.									
idle-timeoutinterval	IPsec tunnel idle timeout in minutes.	integer	Minimum value: 5 Maximum value: 43200	15						
ike-version	IKE protocol version.	option	-	1						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1</td><td>Use IKEv1 protocol.</td></tr><tr><td>2</td><td>Use IKEv2 protocol.</td></tr></table>	Option	Description	1	Use IKEv1 protocol.	2	Use IKEv2 protocol.			
Option	Description									
1	Use IKEv1 protocol.									
2	Use IKEv2 protocol.									
inbound-dscp-copy	Enable/disable copy the dscp in the ESP header to the inner IP Header.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable copy the dscp in the ESP header to the inner IP Header.</td></tr><tr><td>disable</td><td>Disable copy the dscp in the ESP header to the inner IP Header.</td></tr></table>	Option	Description	enable	Enable copy the dscp in the ESP header to the inner IP Header.	disable	Disable copy the dscp in the ESP header to the inner IP Header.			
Option	Description									
enable	Enable copy the dscp in the ESP header to the inner IP Header.									
disable	Disable copy the dscp in the ESP header to the inner IP Header.									
include-local-lan	Enable/disable allow local LAN access on unity clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable local LAN access on Unity clients.</td></tr><tr><td>enable</td><td>Enable local LAN access on Unity clients.</td></tr></table>	Option	Description	disable	Disable local LAN access on Unity clients.	enable	Enable local LAN access on Unity clients.			
Option	Description									
disable	Disable local LAN access on Unity clients.									
enable	Enable local LAN access on Unity clients.									

Parameter	Description	Type	Size	Default
interface	Local physical, aggregate, or VLAN outgoing interface.	string	Maximum length: 35	
ip-delay-interval	IP address reuse delay interval in seconds.	integer	Minimum value: 0 Maximum value: 28800	0
ipv4-dns-server1	IPv4 DNS server 1.	ipv4-address	Not Specified	0.0.0.0
ipv4-dns-server2	IPv4 DNS server 2.	ipv4-address	Not Specified	0.0.0.0
ipv4-dns-server3	IPv4 DNS server 3.	ipv4-address	Not Specified	0.0.0.0
ipv4-end-ip	End of IPv4 range.	ipv4-address	Not Specified	0.0.0.0
ipv4-name	IPv4 address name.	string	Maximum length: 79	
ipv4-netmask	IPv4 Netmask.	ipv4-netmask	Not Specified	255.255.255.255
ipv4-split-exclude	IPv4 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79	
ipv4-split-include	IPv4 split-include subnets.	string	Maximum length: 79	
ipv4-start-ip	Start of IPv4 range.	ipv4-address	Not Specified	0.0.0.0
ipv4-wins-server1	WINS server 1.	ipv4-address	Not Specified	0.0.0.0
ipv4-wins-server2	WINS server 2.	ipv4-address	Not Specified	0.0.0.0
ipv6-dns-server1	IPv6 DNS server 1.	ipv6-address	Not Specified	::
ipv6-dns-server2	IPv6 DNS server 2.	ipv6-address	Not Specified	::
ipv6-dns-server3	IPv6 DNS server 3.	ipv6-address	Not Specified	::
ipv6-end-ip	End of IPv6 range.	ipv6-address	Not Specified	::

Parameter	Description	Type	Size	Default
ipv6-name	IPv6 address name.	string	Maximum length: 79	
ipv6-prefix	IPv6 prefix.	integer	Minimum value: 1 Maximum value: 128	128
ipv6-split-exclude	IPv6 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79	
ipv6-split-include	IPv6 split-include subnets.	string	Maximum length: 79	
ipv6-start-ip	Start of IPv6 range.	ipv6-address	Not Specified	::
keepalive	NAT-T keep alive interval.	integer	Minimum value: 10 Maximum value: 900	10
keylife	Time to wait in seconds before phase 1 encryption key expires.	integer	Minimum value: 120 Maximum value: 172800	86400
local-gw	Local VPN gateway.	ipv4-address	Not Specified	0.0.0.0
localid	Local ID.	string	Maximum length: 63	
localid-type	Local ID type.	option	-	auto
	<div><div>Option</div><div>Description</div></div>			
	<i>auto</i> Select ID type automatically.			
	<i>fqdn</i> Use fully qualified domain name.			
	<i>user-fqdn</i> Use user fully qualified domain name.			
	<i>keyid</i> Use key-id string.			
	<i>address</i> Use local IP address.			
	<i>asn1dn</i> Use ASN.1 distinguished name.			
mesh-selector-type	Add selectors containing subsets of the configuration depending on traffic.	option	-	disable

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>subnet</i></td><td>Enable addition of matching subnet selector.</td></tr><tr><td><i>host</i></td><td>Enable addition of host to host selector.</td></tr></table>	Option	Description	<i>disable</i>	Disable.	<i>subnet</i>	Enable addition of matching subnet selector.	<i>host</i>	Enable addition of host to host selector.			
	Option	Description										
	<i>disable</i>	Disable.										
	<i>subnet</i>	Enable addition of matching subnet selector.										
<i>host</i>	Enable addition of host to host selector.											
mode	ID protection mode used to establish a secure channel.	option	-	main								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>aggressive</i></td><td>Aggressive mode.</td></tr><tr><td><i>main</i></td><td>Main mode.</td></tr></table>	Option	Description	<i>aggressive</i>	Aggressive mode.	<i>main</i>	Main mode.					
	Option	Description										
	<i>aggressive</i>	Aggressive mode.										
<i>main</i>	Main mode.											
mode-cfg	Enable/disable configuration method.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Configuration Method.</td></tr><tr><td><i>enable</i></td><td>Enable Configuration Method.</td></tr></table>	Option	Description	<i>disable</i>	Disable Configuration Method.	<i>enable</i>	Enable Configuration Method.					
	Option	Description										
	<i>disable</i>	Disable Configuration Method.										
<i>enable</i>	Enable Configuration Method.											
mode-cfg-allow-client-selector	Enable/disable mode-cfg client to use custom phase2 selectors.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Mode-cfg client to use wildcard selectors.</td></tr><tr><td><i>enable</i></td><td>Mode-cfg client to use custom selectors.</td></tr></table>	Option	Description	<i>disable</i>	Mode-cfg client to use wildcard selectors.	<i>enable</i>	Mode-cfg client to use custom selectors.					
	Option	Description										
	<i>disable</i>	Mode-cfg client to use wildcard selectors.										
<i>enable</i>	Mode-cfg client to use custom selectors.											
name	IPsec remote gateway name.	string	Maximum length: 35									
nattraversal	Enable/disable NAT traversal.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec NAT traversal.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec NAT traversal.</td></tr><tr><td><i>forced</i></td><td>Force IPsec NAT traversal on.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPsec NAT traversal.	<i>disable</i>	Disable IPsec NAT traversal.	<i>forced</i>	Force IPsec NAT traversal on.			
	Option	Description										
	<i>enable</i>	Enable IPsec NAT traversal.										
	<i>disable</i>	Disable IPsec NAT traversal.										
<i>forced</i>	Force IPsec NAT traversal on.											
negotiate-timeout	IKE SA negotiation timeout in seconds.	integer	Minimum value: 1 Maximum value: 300	30								
npu-offload *	Enable/disable offloading NPU.	option	-	enable								

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU offloading.</td></tr><tr><td><i>disable</i></td><td>Disable NPU offloading.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU offloading.	<i>disable</i>	Disable NPU offloading.									
	Option	Description														
	<i>enable</i>	Enable NPU offloading.														
<i>disable</i>	Disable NPU offloading.															
peer	Accept this peer certificate.	string	Maximum length: 35													
peergrp	Accept this peer certificate group.	string	Maximum length: 35													
peerid	Accept this peer identity.	string	Maximum length: 255													
peertype	Accept this peer type.	option	-	peer												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Accept any peer ID.</td></tr><tr><td><i>one</i></td><td>Accept this peer ID.</td></tr><tr><td><i>dialup</i></td><td>Accept peer ID in dialup group.</td></tr><tr><td><i>peer</i></td><td>Accept this peer certificate.</td></tr><tr><td><i>peergrp</i></td><td>Accept this peer certificate group.</td></tr></table>	Option	Description	<i>any</i>	Accept any peer ID.	<i>one</i>	Accept this peer ID.	<i>dialup</i>	Accept peer ID in dialup group.	<i>peer</i>	Accept this peer certificate.	<i>peergrp</i>	Accept this peer certificate group.			
	Option	Description														
	<i>any</i>	Accept any peer ID.														
	<i>one</i>	Accept this peer ID.														
	<i>dialup</i>	Accept peer ID in dialup group.														
	<i>peer</i>	Accept this peer certificate.														
<i>peergrp</i>	Accept this peer certificate group.															
ppk	Enable/disable IKEv2 Postquantum Preshared Key (PPK).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>allow</i></td><td>Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>require</i></td><td>Require use of IKEv2 Postquantum Preshared Key (PPK).</td></tr></table>	Option	Description	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).	<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).							
	Option	Description														
	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).														
	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).														
<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).															
ppk-identity	IKEv2 Postquantum Preshared Key Identity.	string	Maximum length: 35													
ppk-secret	IKEv2 Postquantum Preshared Key (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified													
priority	Priority for routes added by IKE.	integer	Minimum value: 1 Maximum value: 65535	1												
proposal	Phase1 proposal.	option	-													

Parameter	Description	Type	Size	Default
-----------	-------------	------	------	---------

Parameter	Description	Type	Size	Default						
psksecret	Pre-shared secret for PSK authentication (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
psksecret-remote	Pre-shared secret for remote side PSK authentication (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
reauth	Enable/disable re-authentication upon IKE SA lifetime expiration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable IKE SA re-authentication.</td></tr><tr><td>enable</td><td>Enable IKE SA re-authentication.</td></tr></table>	Option	Description	disable	Disable IKE SA re-authentication.	enable	Enable IKE SA re-authentication.			
Option	Description									
disable	Disable IKE SA re-authentication.									
enable	Enable IKE SA re-authentication.									
rekey	Enable/disable phase1 rekey.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable phase1 rekey.</td></tr><tr><td>disable</td><td>Disable phase1 rekey.</td></tr></table>	Option	Description	enable	Enable phase1 rekey.	disable	Disable phase1 rekey.			
Option	Description									
enable	Enable phase1 rekey.									
disable	Disable phase1 rekey.									
remote-gw	Remote VPN gateway.	ipv4-address	Not Specified	0.0.0.0						
remotegw-ddns	Domain name of remote gateway. For example, name.ddns.com.	string	Maximum length: 63							
rsa-signature-format	Digital Signature Authentication RSA signature format.	option	-	pkcs1						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>pkcs1</td><td>RSASSA PKCS#1 v1.5.</td></tr><tr><td>pss</td><td>RSASSA Probabilistic Signature Scheme (PSS).</td></tr></table>	Option	Description	pkcs1	RSASSA PKCS#1 v1.5.	pss	RSASSA Probabilistic Signature Scheme (PSS).			
Option	Description									
pkcs1	RSASSA PKCS#1 v1.5.									
pss	RSASSA Probabilistic Signature Scheme (PSS).									
rsa-signature-hash-override	Enable/disable IKEv2 RSA signature hash algorithm override.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 RSA signature hash algorithm override.</td></tr><tr><td>disable</td><td>Disable IKEv2 RSA signature hash algorithm override.</td></tr></table>	Option	Description	enable	Enable IKEv2 RSA signature hash algorithm override.	disable	Disable IKEv2 RSA signature hash algorithm override.			
Option	Description									
enable	Enable IKEv2 RSA signature hash algorithm override.									
disable	Disable IKEv2 RSA signature hash algorithm override.									
save-password	Enable/disable saving XAuth username and password on VPN clients.	option	-	disable						

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable saving XAuth username and password on VPN clients.</td></tr><tr><td><i>enable</i></td><td>Enable saving XAuth username and password on VPN clients.</td></tr></table>	Option	Description	<i>disable</i>	Disable saving XAuth username and password on VPN clients.	<i>enable</i>	Enable saving XAuth username and password on VPN clients.							
	Option	Description												
	<i>disable</i>	Disable saving XAuth username and password on VPN clients.												
<i>enable</i>	Enable saving XAuth username and password on VPN clients.													
send-cert-chain	Enable/disable sending certificate chain.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending certificate chain.</td></tr><tr><td><i>disable</i></td><td>Disable sending certificate chain.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending certificate chain.	<i>disable</i>	Disable sending certificate chain.							
	Option	Description												
	<i>enable</i>	Enable sending certificate chain.												
<i>disable</i>	Disable sending certificate chain.													
signature-hash-alg	Digital Signature Authentication hash algorithms.	option	-	sha2-512										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sha1</i></td><td>SHA1.</td></tr><tr><td><i>sha2-256</i></td><td>SHA2-256.</td></tr><tr><td><i>sha2-384</i></td><td>SHA2-384.</td></tr><tr><td><i>sha2-512</i></td><td>SHA2-512.</td></tr></table>	Option	Description	<i>sha1</i>	SHA1.	<i>sha2-256</i>	SHA2-256.	<i>sha2-384</i>	SHA2-384.	<i>sha2-512</i>	SHA2-512.			
	Option	Description												
	<i>sha1</i>	SHA1.												
	<i>sha2-256</i>	SHA2-256.												
	<i>sha2-384</i>	SHA2-384.												
<i>sha2-512</i>	SHA2-512.													
split-include-service	Split-include services.	string	Maximum length: 79											
suite-b	Use Suite-B.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not use UI suite.</td></tr><tr><td><i>suite-b-gcm-128</i></td><td>Use Suite-B-GCM-128.</td></tr><tr><td><i>suite-b-gcm-256</i></td><td>Use Suite-B-GCM-256.</td></tr></table>	Option	Description	<i>disable</i>	Do not use UI suite.	<i>suite-b-gcm-128</i>	Use Suite-B-GCM-128.	<i>suite-b-gcm-256</i>	Use Suite-B-GCM-256.					
	Option	Description												
	<i>disable</i>	Do not use UI suite.												
	<i>suite-b-gcm-128</i>	Use Suite-B-GCM-128.												
<i>suite-b-gcm-256</i>	Use Suite-B-GCM-256.													
type	Remote gateway type.	option	-	static										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Remote VPN gateway has fixed IP address.</td></tr><tr><td><i>dynamic</i></td><td>Remote VPN gateway has dynamic IP address.</td></tr><tr><td><i>ddns</i></td><td>Remote VPN gateway has dynamic IP address and is a dynamic DNS client.</td></tr></table>	Option	Description	<i>static</i>	Remote VPN gateway has fixed IP address.	<i>dynamic</i>	Remote VPN gateway has dynamic IP address.	<i>ddns</i>	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.					
	Option	Description												
	<i>static</i>	Remote VPN gateway has fixed IP address.												
	<i>dynamic</i>	Remote VPN gateway has dynamic IP address.												
<i>ddns</i>	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.													
unity-support	Enable/disable support for Cisco UNITY Configuration Method extensions.	option	-	enable										

Parameter	Description	Type	Size	Default																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Cisco Unity Configuration Method Extensions.</td></tr><tr><td><i>enable</i></td><td>Enable Cisco Unity Configuration Method Extensions.</td></tr></table>	Option	Description	<i>disable</i>	Disable Cisco Unity Configuration Method Extensions.	<i>enable</i>	Enable Cisco Unity Configuration Method Extensions.																									
	Option	Description																														
	<i>disable</i>	Disable Cisco Unity Configuration Method Extensions.																														
<i>enable</i>	Enable Cisco Unity Configuration Method Extensions.																															
usrgrp	User group name for dialup peers.	string	Maximum length: 35																													
wizard-type	GUI VPN Wizard Type.	option	-	custom																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>custom</i></td><td>Custom VPN configuration.</td></tr><tr><td><i>dialup-forticlient</i></td><td>Dial Up - FortiClient Windows, Mac and Android.</td></tr><tr><td><i>dialup-ios</i></td><td>Dial Up - iPhone / iPad Native IPsec Client.</td></tr><tr><td><i>dialup-android</i></td><td>Dial Up - Android Native IPsec Client.</td></tr><tr><td><i>dialup-windows</i></td><td>Dial Up - Windows Native IPsec Client.</td></tr><tr><td><i>dialup-cisco</i></td><td>Dial Up - Cisco IPsec Client.</td></tr><tr><td><i>static-fortigate</i></td><td>Site to Site - FortiGate.</td></tr><tr><td><i>dialup-fortigate</i></td><td>Dial Up - FortiGate.</td></tr><tr><td><i>static-cisco</i></td><td>Site to Site - Cisco.</td></tr><tr><td><i>dialup-cisco-fw</i></td><td>Dialup Up - Cisco Firewall.</td></tr><tr><td><i>simplified-static-fortigate</i></td><td>Site to Site - FortiGate (SD-WAN).</td></tr><tr><td><i>hub-fortigate-auto-discovery</i></td><td>Hub role in a Hub-and-Spoke auto-discovery VPN.</td></tr><tr><td><i>spoke-fortigate-auto-discovery</i></td><td>Spoke role in a Hub-and-Spoke auto-discovery VPN.</td></tr></table>	Option	Description	<i>custom</i>	Custom VPN configuration.	<i>dialup-forticlient</i>	Dial Up - FortiClient Windows, Mac and Android.	<i>dialup-ios</i>	Dial Up - iPhone / iPad Native IPsec Client.	<i>dialup-android</i>	Dial Up - Android Native IPsec Client.	<i>dialup-windows</i>	Dial Up - Windows Native IPsec Client.	<i>dialup-cisco</i>	Dial Up - Cisco IPsec Client.	<i>static-fortigate</i>	Site to Site - FortiGate.	<i>dialup-fortigate</i>	Dial Up - FortiGate.	<i>static-cisco</i>	Site to Site - Cisco.	<i>dialup-cisco-fw</i>	Dialup Up - Cisco Firewall.	<i>simplified-static-fortigate</i>	Site to Site - FortiGate (SD-WAN).	<i>hub-fortigate-auto-discovery</i>	Hub role in a Hub-and-Spoke auto-discovery VPN.	<i>spoke-fortigate-auto-discovery</i>	Spoke role in a Hub-and-Spoke auto-discovery VPN.			
	Option	Description																														
	<i>custom</i>	Custom VPN configuration.																														
	<i>dialup-forticlient</i>	Dial Up - FortiClient Windows, Mac and Android.																														
	<i>dialup-ios</i>	Dial Up - iPhone / iPad Native IPsec Client.																														
	<i>dialup-android</i>	Dial Up - Android Native IPsec Client.																														
	<i>dialup-windows</i>	Dial Up - Windows Native IPsec Client.																														
	<i>dialup-cisco</i>	Dial Up - Cisco IPsec Client.																														
	<i>static-fortigate</i>	Site to Site - FortiGate.																														
	<i>dialup-fortigate</i>	Dial Up - FortiGate.																														
	<i>static-cisco</i>	Site to Site - Cisco.																														
	<i>dialup-cisco-fw</i>	Dialup Up - Cisco Firewall.																														
	<i>simplified-static-fortigate</i>	Site to Site - FortiGate (SD-WAN).																														
<i>hub-fortigate-auto-discovery</i>	Hub role in a Hub-and-Spoke auto-discovery VPN.																															
<i>spoke-fortigate-auto-discovery</i>	Spoke role in a Hub-and-Spoke auto-discovery VPN.																															
xauthtype	XAuth type.	option	-	disable																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable.</td></tr><tr><td><i>client</i></td><td>Enable as client.</td></tr><tr><td><i>pap</i></td><td>Enable as server PAP.</td></tr><tr><td><i>chap</i></td><td>Enable as server CHAP.</td></tr><tr><td><i>auto</i></td><td>Enable as server auto.</td></tr></table>	Option	Description	<i>disable</i>	Disable.	<i>client</i>	Enable as client.	<i>pap</i>	Enable as server PAP.	<i>chap</i>	Enable as server CHAP.	<i>auto</i>	Enable as server auto.																			
	Option	Description																														
	<i>disable</i>	Disable.																														
	<i>client</i>	Enable as client.																														
	<i>pap</i>	Enable as server PAP.																														
	<i>chap</i>	Enable as server CHAP.																														
<i>auto</i>	Enable as server auto.

Parameter	Description	Type	Size	Default										
protocol	Quick mode protocol selector.	integer	Minimum value: 0 Maximum value: 255	0										
replay	Enable/disable replay detection.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													
route-overlap	Action for overlapping routes.	option	-	use-new										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>use-old</i></td><td>Use the old route and do not add the new route.</td></tr><tr><td><i>use-new</i></td><td>Delete the old route and add the new route.</td></tr><tr><td><i>allow</i></td><td>Allow overlapping routes.</td></tr></table>	Option	Description	<i>use-old</i>	Use the old route and do not add the new route.	<i>use-new</i>	Delete the old route and add the new route.	<i>allow</i>	Allow overlapping routes.					
Option	Description													
<i>use-old</i>	Use the old route and do not add the new route.													
<i>use-new</i>	Delete the old route and add the new route.													
<i>allow</i>	Allow overlapping routes.													
selector-match	Match type to use when comparing selectors.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>exact</i></td><td>Match selectors exactly.</td></tr><tr><td><i>subset</i></td><td>Match selectors by subset.</td></tr><tr><td><i>auto</i></td><td>Use subset or exact match depending on selector address type.</td></tr></table>	Option	Description	<i>exact</i>	Match selectors exactly.	<i>subset</i>	Match selectors by subset.	<i>auto</i>	Use subset or exact match depending on selector address type.					
Option	Description													
<i>exact</i>	Match selectors exactly.													
<i>subset</i>	Match selectors by subset.													
<i>auto</i>	Use subset or exact match depending on selector address type.													
single-source	Enable/disable single source IP restriction.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Only single source IP will be accepted.</td></tr><tr><td><i>disable</i></td><td>Source IP range will be accepted.</td></tr></table>	Option	Description	<i>enable</i>	Only single source IP will be accepted.	<i>disable</i>	Source IP range will be accepted.							
Option	Description													
<i>enable</i>	Only single source IP will be accepted.													
<i>disable</i>	Source IP range will be accepted.													
src-addr-type	Local proxy ID type.	option	-	subnet										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>subnet</i></td><td>IPv4 subnet.</td></tr><tr><td><i>range</i></td><td>IPv4 range.</td></tr><tr><td><i>ip</i></td><td>IPv4 IP.</td></tr><tr><td><i>name</i></td><td>IPv4 firewall address or group name.</td></tr></table>	Option	Description	<i>subnet</i>	IPv4 subnet.	<i>range</i>	IPv4 range.	<i>ip</i>	IPv4 IP.	<i>name</i>	IPv4 firewall address or group name.			
Option	Description													
<i>subnet</i>	IPv4 subnet.													
<i>range</i>	IPv4 range.													
<i>ip</i>	IPv4 IP.													
<i>name</i>	IPv4 firewall address or group name.													

Parameter	Description	Type	Size	Default						
src-end-ip	Local proxy ID end.	ipv4-address-any	Not Specified	0.0.0.0						
src-end-ip6	Local proxy ID IPv6 end.	ipv6-address	Not Specified	::						
src-name	Local proxy ID name.	string	Maximum length: 79							
src-name6	Local proxy ID name.	string	Maximum length: 79							
src-port	Quick mode source port.	integer	Minimum value: 0 Maximum value: 65535	0						
src-start-ip	Local proxy ID start.	ipv4-address-any	Not Specified	0.0.0.0						
src-start-ip6	Local proxy ID IPv6 start.	ipv6-address	Not Specified	::

## config vpn ocvpn

Parameter	Description	Type	Size	Default
auto-discovery	Enable/disable auto-discovery shortcuts.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable ADVPN auto-discovery shortcuts.		
	<i>disable</i>	Disable ADVPN auto-discovery shortcuts.		
auto-discovery-shortcut-mode	Control deletion of child short-cut tunnels when the parent tunnel goes down.	option	-	independent
	<b>Option</b>	<b>Description</b>		
	<i>independent</i>	Short-cut tunnels remain up if the parent tunnel goes down.		
	<i>dependent</i>	Short-cut tunnels are brought down if the parent tunnel goes down.		
eap	Enable/disable EAP client authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable EAP client authentication.		
	<i>disable</i>	Disable EAP client authentication.		
eap-users	EAP authentication user group.	string	Maximum length: 35	
ip-allocation-block	Class B subnet reserved for private IP address assignment.	ipv4-classnet-any	Not Specified	10.254.0.0 255.255.0.0
multipath	Enable/disable multipath redundancy.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable multipath redundancy.		
	<i>disable</i>	Disable multipath redundancy.		
nat	Enable/disable NAT support.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable NAT support.		
	<i>disable</i>	Disable NAT support.		
poll-interval	Overlay Controller VPN polling interval.	integer	Minimum value: 30 Maximum value: 120	30

Parameter	Description	Type	Size	Default								
role	Set device role.	option	-	spoke								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>spoke</i></td><td>Register device as static spoke.</td></tr><tr><td><i>primary-hub</i></td><td>Register device as primary hub.</td></tr><tr><td><i>secondary-hub</i></td><td>Register device as secondary hub.</td></tr></table>				Option	Description	<i>spoke</i>	Register device as static spoke.	<i>primary-hub</i>	Register device as primary hub.	<i>secondary-hub</i>	Register device as secondary hub.
	Option	Description										
	<i>spoke</i>	Register device as static spoke.										
	<i>primary-hub</i>	Register device as primary hub.										
<i>secondary-hub</i>	Register device as secondary hub.											
sdwan	Enable/disable adding OCVPN tunnels to SD-WAN.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable adding OCVPN tunnels to SD-WAN.</td></tr><tr><td><i>disable</i></td><td>Disable adding OCVPN tunnels to SD-WAN.</td></tr></table>				Option	Description	<i>enable</i>	Enable adding OCVPN tunnels to SD-WAN.	<i>disable</i>	Disable adding OCVPN tunnels to SD-WAN.		
	Option	Description										
	<i>enable</i>	Enable adding OCVPN tunnels to SD-WAN.										
<i>disable</i>	Disable adding OCVPN tunnels to SD-WAN.											
sdwan-zone	Set SD-WAN zone.	string	Maximum length: 35	virtual-wan-link								
status	Enable/disable Overlay Controller cloud assisted VPN.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Overlay Controller VPN.</td></tr><tr><td><i>disable</i></td><td>Disable Overlay Controller VPN.</td></tr></table>				Option	Description	<i>enable</i>	Enable Overlay Controller VPN.	<i>disable</i>	Disable Overlay Controller VPN.		
	Option	Description										
	<i>enable</i>	Enable Overlay Controller VPN.										
<i>disable</i>	Disable Overlay Controller VPN.											
wan-interface <name>	FortiGate WAN interfaces to use with OCVPN. Interface name.	string	Maximum length: 79									

## config forticlient-access

Parameter	Description	Type	Size	Default						
status	Enable/disable FortiClient to access OCVPN networks.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiClient access to OCVPN overlays.</td></tr><tr><td><i>disable</i></td><td>Disable FortiClient access to OCVPN overlays.</td></tr></table>				Option	Description	<i>enable</i>	Enable FortiClient access to OCVPN overlays.	<i>disable</i>	Disable FortiClient access to OCVPN overlays.
	Option	Description								
	<i>enable</i>	Enable FortiClient access to OCVPN overlays.								
<i>disable</i>	Disable FortiClient access to OCVPN overlays.									
psksecret	Pre-shared secret for FortiClient PSK authentication (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							

## config auth-groups

Parameter	Description	Type	Size	Default
name	Group name.	string	Maximum length: 35	
auth-group	Authentication user group for FortiClient access.	string	Maximum length: 35	
overlays <overlay-name>	OCVPN overlays to allow access to. Overlay name.	string	Maximum length: 79	

## config overlays

Parameter	Description	Type	Size	Default
overlay-name	Overlay name.	string	Maximum length: 63	
inter-overlay	Allow or deny traffic from other overlays.	option	-	deny
	Option	Description		
	<i>allow</i>	Allow traffic from other overlays.		
	<i>deny</i>	Deny traffic from other overlays.		

## config subnets

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
type	Subnet type.	option	-	subnet
	<b>Option</b>	<b>Description</b>		
	<i>subnet</i>	Configure participating subnet IP and mask.		
	<i>interface</i>	Configure participating LAN interface.		
subnet	IPv4 address and subnet mask.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
interface	LAN interface.	string	Maximum length: 15	

## config vpn pptp

Configure PPTP.

```
config vpn pptp
  Description: Configure PPTP.
  set eip {ipv4-address}
  set ip-mode [range|usrgrp]
  set local-ip {ipv4-address}
  set sip {ipv4-address}
  set status [enable|disable]
  set usrgrp {string}
end
```

## config vpn pptp

Parameter	Description	Type	Size	Default
eip	End IP.	ipv4-address	Not Specified	0.0.0.0
ip-mode	IP assignment mode for PPTP client.	option	-	range
	Option	Description		
	range	PPTP client IP from manual config (range from sip to eip).		
	usrgrp	PPTP client IP from user-group defined server.		
local-ip	Local IP to be used for peer's remote IP.	ipv4-address	Not Specified	0.0.0.0
sip	Start IP.	ipv4-address	Not Specified	0.0.0.0
status	Enable/disable FortiGate as a PPTP gateway.	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
usrgrp	User group.	string	Maximum length: 35	

## config vpn ssl client

Client.

```
config vpn ssl client
  Description: Client.
  edit <name>
    set certificate {string}
```

```

        set class-id {integer}
        set comment {var-string}
        set distance {integer}
        set interface {string}
        set ipv4-subnets {string}
        set ipv6-subnets {string}
        set peer {string}
        set port {integer}
        set priority {integer}
        set psk {password-3}
        set realm {string}
        set server {string}
        set source-ip {string}
        set status [enable|disable]
        set user {string}
    next
end

```

### config vpn ssl client

Parameter	Description	Type	Size	Default
certificate	Certificate to offer to SSL-VPN server if it requests one.	string	Maximum length: 35	
class-id	Traffic class ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
comment	Comment.	var-string	Maximum length: 255	
distance	Distance for routes added by SSL-VPN.	integer	Minimum value: 1 Maximum value: 255	10
interface	SSL interface to send/receive traffic over.	string	Maximum length: 15	
ipv4-subnets	IPv4 subnets that the client is protecting.	string	Maximum length: 79	
ipv6-subnets	IPv6 subnets that the client is protecting.	string	Maximum length: 79	
name	SSL-VPN tunnel name.	string	Maximum length: 35	
peer	Authenticate peer's certificate with the peer/peergrp.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default						
port	SSL-VPN server port.	integer	Minimum value: 1 Maximum value: 65535	443						
priority	Priority for routes added by SSL-VPN.	integer	Minimum value: 1 Maximum value: 65535	1						
psk	Pre-shared secret to authenticate with the server (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
realm	Realm name configured on SSL-VPN server.	string	Maximum length: 35							
server	IPv4, IPv6 or DNS address of the SSL-VPN server.	string	Maximum length: 63							
source-ip	IPv4 or IPv6 address to use as a source for the SSL-VPN connection to the server.	string	Maximum length: 63							
status	Enable/disable this SSL-VPN client configuration.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the SSL-VPN configuration.</td></tr><tr><td><i>disable</i></td><td>Disable the SSL-VPN configuration.</td></tr></table>				Option	Description	<i>enable</i>	Enable the SSL-VPN configuration.	<i>disable</i>	Disable the SSL-VPN configuration.
Option	Description									
<i>enable</i>	Enable the SSL-VPN configuration.									
<i>disable</i>	Disable the SSL-VPN configuration.									
user	Username to offer to the peer to authenticate the client.	string	Maximum length: 35							

## config vpn ssl settings

Configure SSL-VPN.

```

config vpn ssl settings
  Description: Configure SSL-VPN.
  set algorithm [high|medium|...]
  set auth-session-check-source-ip [enable|disable]
  set auth-timeout {integer}
  config authentication-rule
    Description: Authentication rule for SSL-VPN.
    edit <id>
      set source-interface <name1>, <name2>, ...
      set source-address <name1>, <name2>, ...

## config vpn ssl settings

Parameter	Description	Type	Size	Default										
algorithm	Force the SSL-VPN security level. High allows only high. Medium allows medium and high. Low allows any.	option	-	high										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>high</i></td><td>High algorithms.</td></tr><tr><td><i>medium</i></td><td>High and medium algorithms.</td></tr><tr><td><i>default</i></td><td>default</td></tr><tr><td><i>low</i></td><td>All algorithms.</td></tr></table>	Option	Description	<i>high</i>	High algorithms.	<i>medium</i>	High and medium algorithms.	<i>default</i>	default	<i>low</i>	All algorithms.			
Option	Description													
<i>high</i>	High algorithms.													
<i>medium</i>	High and medium algorithms.													
<i>default</i>	default													
<i>low</i>	All algorithms.													
auth-session-check-source-ip	Enable/disable checking of source IP for authentication session.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable checking of source IP for authentication session.</td></tr><tr><td><i>disable</i></td><td>Disable checking of source IP for authentication session.</td></tr></table>	Option	Description	<i>enable</i>	Enable checking of source IP for authentication session.	<i>disable</i>	Disable checking of source IP for authentication session.							
Option	Description													
<i>enable</i>	Enable checking of source IP for authentication session.													
<i>disable</i>	Disable checking of source IP for authentication session.													
auth-timeout	SSL-VPN authentication timeout.	integer	Minimum value: 0 Maximum value: 259200	28800										
auto-tunnel-static-route	Enable/disable to auto-create static routes for the SSL-VPN tunnel IP addresses.	option	-	enable										

Parameter	Description	Type	Size	Default																																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.																															
Option	Description																																					
<i>enable</i>	Enable setting.																																					
<i>disable</i>	Disable setting.																																					
banned-cipher	Select one or more cipher technologies that cannot be used in SSL-VPN negotiations. Only applies to TLS 1.2 and below.	option	-																																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>RSA</i></td><td>Ban the use of cipher suites using RSA key.</td></tr><tr><td><i>DHE</i></td><td>Ban the use of cipher suites using authenticated ephemeral DH key agreement.</td></tr><tr><td><i>ECDHE</i></td><td>Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.</td></tr><tr><td><i>DSS</i></td><td>Ban the use of cipher suites using DSS authentication.</td></tr><tr><td><i>ECDSA</i></td><td>Ban the use of cipher suites using ECDSA authentication.</td></tr><tr><td><i>AES</i></td><td>Ban the use of cipher suites using either 128 or 256 bit AES.</td></tr><tr><td><i>AESGCM</i></td><td>Ban the use of cipher suites AES in Galois Counter Mode (GCM).</td></tr><tr><td><i>CAMELLIA</i></td><td>Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.</td></tr><tr><td><i>3DES</i></td><td>Ban the use of cipher suites using triple DES</td></tr><tr><td><i>SHA1</i></td><td>Ban the use of cipher suites using HMAC-SHA1.</td></tr><tr><td><i>SHA256</i></td><td>Ban the use of cipher suites using HMAC-SHA256.</td></tr><tr><td><i>SHA384</i></td><td>Ban the use of cipher suites using HMAC-SHA384.</td></tr><tr><td><i>STATIC</i></td><td>Ban the use of cipher suites using static keys.</td></tr><tr><td><i>CHACHA20</i></td><td>Ban the use of cipher suites using ChaCha20.</td></tr><tr><td><i>ARIA</i></td><td>Ban the use of cipher suites using ARIA.</td></tr><tr><td><i>AESCCM</i></td><td>Ban the use of cipher suites using AESCCM.</td></tr></table>	Option	Description	<i>RSA</i>	Ban the use of cipher suites using RSA key.	<i>DHE</i>	Ban the use of cipher suites using authenticated ephemeral DH key agreement.	<i>ECDHE</i>	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.	<i>DSS</i>	Ban the use of cipher suites using DSS authentication.	<i>ECDSA</i>	Ban the use of cipher suites using ECDSA authentication.	<i>AES</i>	Ban the use of cipher suites using either 128 or 256 bit AES.	<i>AESGCM</i>	Ban the use of cipher suites AES in Galois Counter Mode (GCM).	<i>CAMELLIA</i>	Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.	<i>3DES</i>	Ban the use of cipher suites using triple DES	<i>SHA1</i>	Ban the use of cipher suites using HMAC-SHA1.	<i>SHA256</i>	Ban the use of cipher suites using HMAC-SHA256.	<i>SHA384</i>	Ban the use of cipher suites using HMAC-SHA384.	<i>STATIC</i>	Ban the use of cipher suites using static keys.	<i>CHACHA20</i>	Ban the use of cipher suites using ChaCha20.	<i>ARIA</i>	Ban the use of cipher suites using ARIA.	<i>AESCCM</i>	Ban the use of cipher suites using AESCCM.			
Option	Description																																					
<i>RSA</i>	Ban the use of cipher suites using RSA key.																																					
<i>DHE</i>	Ban the use of cipher suites using authenticated ephemeral DH key agreement.																																					
<i>ECDHE</i>	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.																																					
<i>DSS</i>	Ban the use of cipher suites using DSS authentication.																																					
<i>ECDSA</i>	Ban the use of cipher suites using ECDSA authentication.																																					
<i>AES</i>	Ban the use of cipher suites using either 128 or 256 bit AES.																																					
<i>AESGCM</i>	Ban the use of cipher suites AES in Galois Counter Mode (GCM).																																					
<i>CAMELLIA</i>	Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.																																					
<i>3DES</i>	Ban the use of cipher suites using triple DES																																					
<i>SHA1</i>	Ban the use of cipher suites using HMAC-SHA1.																																					
<i>SHA256</i>	Ban the use of cipher suites using HMAC-SHA256.																																					
<i>SHA384</i>	Ban the use of cipher suites using HMAC-SHA384.																																					
<i>STATIC</i>	Ban the use of cipher suites using static keys.																																					
<i>CHACHA20</i>	Ban the use of cipher suites using ChaCha20.																																					
<i>ARIA</i>	Ban the use of cipher suites using ARIA.																																					
<i>AESCCM</i>	Ban the use of cipher suites using AESCCM.																																					
browser-language-detection	Enable/disable overriding the configured system language based on the preferred language of the browser.	option	-	enable																																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.																															
Option	Description																																					
<i>enable</i>	Enable setting.																																					
<i>disable</i>	Disable setting.																																					

Parameter	Description	Type	Size	Default												
check-referer	Enable/disable verification of referer field in HTTP request header.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of referer field in HTTP request header.</td></tr><tr><td><i>disable</i></td><td>Disable verification of referer field in HTTP request header.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of referer field in HTTP request header.	<i>disable</i>	Disable verification of referer field in HTTP request header.									
Option	Description															
<i>enable</i>	Enable verification of referer field in HTTP request header.															
<i>disable</i>	Disable verification of referer field in HTTP request header.															
ciphersuite	Select one or more TLS 1.3 ciphersuites to enable. Does not affect ciphers in TLS 1.2 and below. At least one must be enabled. To disable all, set ssl-max-proto-ver to tls1-2 or below.	option	-	TLS-AES-128-GCM-SHA256 TLS-AES-256-GCM-SHA384 TLS-CHACHA20-POLY1305-SHA256												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>TLS-AES-128-GCM-SHA256</i></td><td>Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.</td></tr><tr><td><i>TLS-AES-256-GCM-SHA384</i></td><td>Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.</td></tr><tr><td><i>TLS-CHACHA20-POLY1305-SHA256</i></td><td>Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.</td></tr><tr><td><i>TLS-AES-128-CCM-SHA256</i></td><td>Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.</td></tr><tr><td><i>TLS-AES-128-CCM-8-SHA256</i></td><td>Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.</td></tr></table>	Option	Description	<i>TLS-AES-128-GCM-SHA256</i>	Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.	<i>TLS-AES-256-GCM-SHA384</i>	Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.	<i>TLS-CHACHA20-POLY1305-SHA256</i>	Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.	<i>TLS-AES-128-CCM-SHA256</i>	Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.	<i>TLS-AES-128-CCM-8-SHA256</i>	Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.			
Option	Description															
<i>TLS-AES-128-GCM-SHA256</i>	Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.															
<i>TLS-AES-256-GCM-SHA384</i>	Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.															
<i>TLS-CHACHA20-POLY1305-SHA256</i>	Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.															
<i>TLS-AES-128-CCM-SHA256</i>	Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.															
<i>TLS-AES-128-CCM-8-SHA256</i>	Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.															
client-sigalgs	Set signature algorithms related to client authentication. Affects TLS version <= 1.2 only.	option	-	all												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>no-rsa-pss</i></td><td>Disable RSA-PSS signature algorithms for client authentication.</td></tr><tr><td><i>all</i></td><td>Enable all supported signature algorithms for client authentication.</td></tr></table>	Option	Description	<i>no-rsa-pss</i>	Disable RSA-PSS signature algorithms for client authentication.	<i>all</i>	Enable all supported signature algorithms for client authentication.									
Option	Description															
<i>no-rsa-pss</i>	Disable RSA-PSS signature algorithms for client authentication.															
<i>all</i>	Enable all supported signature algorithms for client authentication.															
default-portal	Default SSL-VPN portal.	string	Maximum length: 35													

Parameter	Description	Type	Size	Default						
deflate-compression-level	Compression level (0~9).	integer	Minimum value: 0 Maximum value: 9	6						
deflate-min-data-size	Minimum amount of data that triggers compression.	integer	Minimum value: 200 Maximum value: 65535	300						
dns-server1	DNS server 1.	ipv4-address	Not Specified	0.0.0.0						
dns-server2	DNS server 2.	ipv4-address	Not Specified	0.0.0.0						
dns-suffix	DNS suffix used for SSL-VPN clients.	var-string	Maximum length: 253							
dtls-hello-timeout	SSLVPN maximum DTLS hello timeout.	integer	Minimum value: 10 Maximum value: 60	10						
dtls-max-proto-ver	DTLS maximum protocol version.	option	-	dtls1-2						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>dtls1-0</td><td>DTLS version 1.0.</td></tr><tr><td>dtls1-2</td><td>DTLS version 1.2.</td></tr></table>				Option	Description	dtls1-0	DTLS version 1.0.	dtls1-2	DTLS version 1.2.
Option	Description									
dtls1-0	DTLS version 1.0.									
dtls1-2	DTLS version 1.2.									
dtls-min-proto-ver	DTLS minimum protocol version.	option	-	dtls1-0						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>dtls1-0</td><td>DTLS version 1.0.</td></tr><tr><td>dtls1-2</td><td>DTLS version 1.2.</td></tr></table>				Option	Description	dtls1-0	DTLS version 1.0.	dtls1-2	DTLS version 1.2.
Option	Description									
dtls1-0	DTLS version 1.0.									
dtls1-2	DTLS version 1.2.									
dtls-tunnel	Enable/disable DTLS to prevent eavesdropping, tampering, or message forgery.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									

Parameter	Description	Type	Size	Default
dual-stack-mode	Tunnel mode: enable parallel IPv4 and IPv6 tunnel. Web mode: support IPv4 and IPv6 bookmarks in the portal.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
encode-2f-sequence	Encode \2F sequence to forward slash in URLs.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
encrypt-and-store-password	Encrypt and store user passwords for SSL-VPN web sessions.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
force-two-factor-auth	Enable/disable only PKI users with two-factor authentication for SSL-VPNs.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
header-x-forwarded-for	Forward the same, add, or remove HTTP header.	option	-	add
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
hsts-include-subdomains	Add HSTS includeSubDomains response header.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
http-compression	Enable/disable to allow HTTP compression over SSL-VPN tunnels.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
http-only-cookie	Enable/disable SSL-VPN support for HttpOnly cookies.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
http-request-body-timeout	SSL-VPN session is disconnected if an HTTP request body is not received within this time.	integer	Minimum value: 0 Maximum value: 4294967295	30
http-request-header-timeout	SSL-VPN session is disconnected if an HTTP request header is not received within this time.	integer	Minimum value: 0 Maximum value: 4294967295	20
https-redirect	Enable/disable redirect of port 80 to SSL-VPN port.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
idle-timeout	SSL-VPN disconnects if idle for specified time in seconds.	integer	Minimum value: 0 Maximum value: 259200	300
ipv6-dns-server1	IPv6 DNS server 1.	ipv6-address	Not Specified	::

Parameter	Description	Type	Size	Default						
ipv6-dns-server2	IPv6 DNS server 2.	ipv6-address	Not Specified	::						
ipv6-wins-server1	IPv6 WINS server 1.	ipv6-address	Not Specified	::						
ipv6-wins-server2	IPv6 WINS server 2.	ipv6-address	Not Specified	::						
login-attempt-limit	SSL-VPN maximum login attempt times before block.	integer	Minimum value: 0 Maximum value: 4294967295	2						
login-block-time	Time for which a user is blocked from logging in after too many failed login attempts.	integer	Minimum value: 0 Maximum value: 4294967295	60						
login-timeout	SSLVPN maximum login timeout.	integer	Minimum value: 10 Maximum value: 180	30						
port	SSL-VPN access port.	integer	Minimum value: 1 Maximum value: 65535	10443						
port-precedence	Enable/disable, Enable means that if SSL-VPN connections are allowed on an interface admin GUI connections are blocked on that interface.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
reqclientcert	Enable/disable to require client certificates for all SSL-VPN users.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									

Parameter	Description	Type	Size	Default						
saml-redirect-port	SAML local redirect port in the machine running FortiClient. 0 is to disable redirection on FGT side.	integer	Minimum value: 0 Maximum value: 65535	8020						
server-hostname	Server hostname for HTTPS. When set, will be used for SSL VPN web proxy host header for any redirection.	string	Maximum length: 255							
servercert	Name of the server certificate to be used for SSL-VPNs.	string	Maximum length: 35							
source-address<name>	Source address of incoming traffic. Address name.	string	Maximum length: 79							
source-address-negate	Enable/disable negated source address match.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
source-address6<name>	IPv6 source address of incoming traffic. IPv6 address name.	string	Maximum length: 79							
source-address6-negate	Enable/disable negated source IPv6 address match.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
source-interface<name>	SSL-VPN source interface of incoming traffic. Interface name.	string	Maximum length: 35							
ssl-client-renegotiation	Enable/disable to allow client renegotiation by the server if the tunnel goes down.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Abort any SSL connection that attempts to renegotiate.</td></tr><tr><td>enable</td><td>Allow a SSL client to renegotiate.</td></tr></table>				Option	Description	disable	Abort any SSL connection that attempts to renegotiate.	enable	Allow a SSL client to renegotiate.
Option	Description									
disable	Abort any SSL connection that attempts to renegotiate.									
enable	Allow a SSL client to renegotiate.									

Parameter	Description	Type	Size	Default										
ssl-insert-empty-fragment	Enable/disable insertion of empty fragment.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													
ssl-max-protocol-ver	SSL maximum protocol version.	option	-	tls1-3										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls1-0</i></td><td>TLS version 1.0.</td></tr><tr><td><i>tls1-1</i></td><td>TLS version 1.1.</td></tr><tr><td><i>tls1-2</i></td><td>TLS version 1.2.</td></tr><tr><td><i>tls1-3</i></td><td>TLS version 1.3.</td></tr></table>	Option	Description	<i>tls1-0</i>	TLS version 1.0.	<i>tls1-1</i>	TLS version 1.1.	<i>tls1-2</i>	TLS version 1.2.	<i>tls1-3</i>	TLS version 1.3.			
Option	Description													
<i>tls1-0</i>	TLS version 1.0.													
<i>tls1-1</i>	TLS version 1.1.													
<i>tls1-2</i>	TLS version 1.2.													
<i>tls1-3</i>	TLS version 1.3.													
ssl-min-protocol-ver	SSL minimum protocol version.	option	-	tls1-2										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls1-0</i></td><td>TLS version 1.0.</td></tr><tr><td><i>tls1-1</i></td><td>TLS version 1.1.</td></tr><tr><td><i>tls1-2</i></td><td>TLS version 1.2.</td></tr><tr><td><i>tls1-3</i></td><td>TLS version 1.3.</td></tr></table>	Option	Description	<i>tls1-0</i>	TLS version 1.0.	<i>tls1-1</i>	TLS version 1.1.	<i>tls1-2</i>	TLS version 1.2.	<i>tls1-3</i>	TLS version 1.3.			
Option	Description													
<i>tls1-0</i>	TLS version 1.0.													
<i>tls1-1</i>	TLS version 1.1.													
<i>tls1-2</i>	TLS version 1.2.													
<i>tls1-3</i>	TLS version 1.3.													
status	Enable/disable SSL-VPN.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-VPN.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN.	<i>disable</i>	Disable SSL-VPN.							
Option	Description													
<i>enable</i>	Enable SSL-VPN.													
<i>disable</i>	Disable SSL-VPN.													
transform-backward-slashes	Transform backward slashes to forward slashes in URLs.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													

Parameter	Description	Type	Size	Default						
tunnel-addr-assigned-method	Method used for assigning address for tunnel.	option	-	first-available						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>first-available</i></td><td>Assign the first available address from the pools.</td></tr><tr><td><i>round-robin</i></td><td>Assign the available address from the pool with a round robin fashion.</td></tr></table>	Option	Description	<i>first-available</i>	Assign the first available address from the pools.	<i>round-robin</i>	Assign the available address from the pool with a round robin fashion.			
Option	Description									
<i>first-available</i>	Assign the first available address from the pools.									
<i>round-robin</i>	Assign the available address from the pool with a round robin fashion.									
tunnel-connect-without-reauth	Enable/disable tunnel connection without re-authorization if previous connection dropped.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable tunnel connection without re-authorization.</td></tr><tr><td><i>disable</i></td><td>Disable tunnel connection without re-authorization.</td></tr></table>	Option	Description	<i>enable</i>	Enable tunnel connection without re-authorization.	<i>disable</i>	Disable tunnel connection without re-authorization.			
Option	Description									
<i>enable</i>	Enable tunnel connection without re-authorization.									
<i>disable</i>	Disable tunnel connection without re-authorization.									
tunnel-ip-pools <name>	Names of the IPv4 IP Pool firewall objects that define the IP addresses reserved for remote clients. Address name.	string	Maximum length: 79							
tunnel-ipv6-pools <name>	Names of the IPv6 IP Pool firewall objects that define the IP addresses reserved for remote clients. Address name.	string	Maximum length: 79							
tunnel-user-session-timeout	Time out value to clean up user session after tunnel connection is dropped.	integer	Minimum value: 1 Maximum value: 255	30						
unsafe-legacy-renegotiation	Enable/disable unsafe legacy re-negotiation.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
url-obscuration	Enable/disable to obscure the host name of the URL of the web browser display.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default						
user-peer	Name of user peer.	string	Maximum length: 35							
wins-server1	WINS server 1.	ipv4-address	Not Specified	0.0.0.0						
wins-server2	WINS server 2.	ipv4-address	Not Specified	0.0.0.0						
x-content-type-options	Add HTTP X-Content-Type-Options header.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
ztna-trusted-client	Enable/disable verification of device certificate for SSLVPN ZTNA session.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of device certificate for SSLVPN ZTNA session.</td></tr><tr><td><i>disable</i></td><td>Disable verification of device certificate for SSLVPN ZTNA session.</td></tr></table>				Option	Description	<i>enable</i>	Enable verification of device certificate for SSLVPN ZTNA session.	<i>disable</i>	Disable verification of device certificate for SSLVPN ZTNA session.
Option	Description									
<i>enable</i>	Enable verification of device certificate for SSLVPN ZTNA session.									
<i>disable</i>	Disable verification of device certificate for SSLVPN ZTNA session.									

### config authentication-rule

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
source-interface <name>	SSL-VPN source interface of incoming traffic. Interface name.	string	Maximum length: 35	
source-address <name>	Source address of incoming traffic. Address name.	string	Maximum length: 79	
source-address-negate	Enable/disable negated source address match.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
source-address6 <name>	IPv6 source address of incoming traffic. IPv6 address name.	string	Maximum length: 79	
source-address6-negate	Enable/disable negated source IPv6 address match.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
users <name>	User name. User name.	string	Maximum length: 79	
groups <name>	User groups. Group name.	string	Maximum length: 79	
portal	SSL-VPN portal.	string	Maximum length: 35	
realm	SSL-VPN realm.	string	Maximum length: 35	
client-cert	Enable/disable SSL-VPN client certificate restrictive.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
user-peer	Name of user peer.	string	Maximum length: 35	
cipher	SSL-VPN cipher strength.	option	-	high
	<b>Option</b>	<b>Description</b>		
	<i>any</i>	Any cipher strength.		
	<i>high</i>	High cipher strength (>= 168 bits).		
	<i>medium</i>	Medium cipher strength (>= 128 bits).		

Parameter	Description	Type	Size	Default
auth	SSL-VPN authentication method restriction.	option	-	any
	Option	Description		
	<i>any</i>	Any		
	<i>local</i>	Local		
	<i>radius</i>	RADIUS		
	<i>tacacs+</i>	TACACS+		
	<i>ldap</i>	LDAP		
	<i>peer</i>	PEER		

## config vpn ssl web host-check-software

SSL-VPN host check software.

```

config vpn ssl web host-check-software
    Description: SSL-VPN host check software.
    edit <name>
        config check-item-list
            Description: Check item list.

## config vpn ssl web portal

Parameter	Description	Type	Size	Default
allow-user-access	Allow user access to SSL-VPN applications.	option	-	web ftp smb sftp telnet ssh vnc rdp ping
Option		Description		
<i>web</i>		HTTP/HTTPS access.		
<i>ftp</i>		FTP access.		
<i>smb</i>		SMB/CIFS access.		
<i>sftp</i>		SFTP access.		
<i>telnet</i>		TELNET access.		

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ssh</i></td><td>SSH access.</td></tr><tr><td><i>vnc</i></td><td>VNC access.</td></tr><tr><td><i>rdp</i></td><td>RDP access.</td></tr><tr><td><i>ping</i></td><td>PING access.</td></tr></table>	Option	Description	<i>ssh</i>	SSH access.	<i>vnc</i>	VNC access.	<i>rdp</i>	RDP access.	<i>ping</i>	PING access.			
	Option	Description												
	<i>ssh</i>	SSH access.												
	<i>vnc</i>	VNC access.												
	<i>rdp</i>	RDP access.												
<i>ping</i>	PING access.													
auto-connect	Enable/disable automatic connect by client when system is up.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
	Option	Description												
	<i>enable</i>	Enable setting.												
<i>disable</i>	Disable setting.													
client-src-range	Allow client to add source range for the tunnel traffic.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
	Option	Description												
	<i>enable</i>	Enable setting.												
<i>disable</i>	Disable setting.													
clipboard	Enable to support RDP/VPC clipboard functionality.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable support of RDP/VNC clipboard.</td></tr><tr><td><i>disable</i></td><td>Disable support of RDP/VNC clipboard.</td></tr></table>	Option	Description	<i>enable</i>	Enable support of RDP/VNC clipboard.	<i>disable</i>	Disable support of RDP/VNC clipboard.							
	Option	Description												
	<i>enable</i>	Enable support of RDP/VNC clipboard.												
<i>disable</i>	Disable support of RDP/VNC clipboard.													
custom-lang	Change the web portal display language. Overrides config system global set language. You can use config system custom-language and execute system custom-language to add custom language files.	string	Maximum length: 35											
customize-forticlient-download-url	Enable support of customized download URL for FortiClient.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
	Option	Description												
	<i>enable</i>	Enable setting.												
<i>disable</i>	Disable setting.													

Parameter	Description	Type	Size	Default						
default-window-height	Screen height.	integer	Minimum value: 0 Maximum value: 65535	768						
default-window-width	Screen width.	integer	Minimum value: 0 Maximum value: 65535	1024						
dhcp-ip-overlap	Configure overlapping DHCP IP allocation assignment.	option	-	use-new						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>use-new</td><td>Assign DHCP lease to new client and remove old client lease.</td></tr><tr><td>use-old</td><td>Preserve previous client IP allocation and disconnect new client.</td></tr></table>				Option	Description	use-new	Assign DHCP lease to new client and remove old client lease.	use-old	Preserve previous client IP allocation and disconnect new client.
	Option	Description								
	use-new	Assign DHCP lease to new client and remove old client lease.								
use-old	Preserve previous client IP allocation and disconnect new client.									
dhcp-ra-giaddr	Relay agent gateway IP address to use in the giaddr field of DHCP requests.	ipv4-address	Not Specified	0.0.0.0						
dhcp6-ra-linkaddr	Relay agent IPv6 link address to use in DHCP6 requests.	ipv6-address	Not Specified	::						
display-bookmark	Enable to display the web portal bookmark widget.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
	Option	Description								
	enable	Enable setting.								
disable	Disable setting.									
display-connection-tools	Enable to display the web portal connection tools widget.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
	Option	Description								
	enable	Enable setting.								
disable	Disable setting.									
display-history	Enable to display the web portal user login history widget.	option	-	enable						

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
display-status	Enable to display the web portal status widget.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
dns-server1	IPv4 DNS server 1.	ipv4-address	Not Specified	0.0.0.0
dns-server2	IPv4 DNS server 2.	ipv4-address	Not Specified	0.0.0.0
dns-suffix	DNS suffix.	var-string	Maximum length: 253	
exclusive-routing	Enable/disable all traffic go through tunnel only.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
forticlient-download	Enable/disable download option for FortiClient.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
forticlient-download-method	FortiClient download method.	option	-	direct
	<b>Option</b> <b>Description</b>			
	<i>direct</i>	Download via direct link.		
	<i>ssl-vpn</i>	Download via SSL-VPN.		
heading	Web portal heading message.	string	Maximum length: 31	SSL-VPN Portal

Parameter	Description	Type	Size	Default												
hide-sso-credential	Enable to prevent SSO credential being sent to client.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.									
Option	Description															
<i>enable</i>	Enable setting.															
<i>disable</i>	Disable setting.															
host-check	Type of host checking performed on endpoints.	option	-	none												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No host checking.</td></tr><tr><td><i>av</i></td><td>AntiVirus software recognized by the Windows Security Center.</td></tr><tr><td><i>fw</i></td><td>Firewall software recognized by the Windows Security Center.</td></tr><tr><td><i>av-fw</i></td><td>AntiVirus and firewall software recognized by the Windows Security Center.</td></tr><tr><td><i>custom</i></td><td>Custom.</td></tr></table>	Option	Description	<i>none</i>	No host checking.	<i>av</i>	AntiVirus software recognized by the Windows Security Center.	<i>fw</i>	Firewall software recognized by the Windows Security Center.	<i>av-fw</i>	AntiVirus and firewall software recognized by the Windows Security Center.	<i>custom</i>	Custom.			
Option	Description															
<i>none</i>	No host checking.															
<i>av</i>	AntiVirus software recognized by the Windows Security Center.															
<i>fw</i>	Firewall software recognized by the Windows Security Center.															
<i>av-fw</i>	AntiVirus and firewall software recognized by the Windows Security Center.															
<i>custom</i>	Custom.															
host-check-interval	Periodic host check interval. Value of 0 means disabled and host checking only happens when the endpoint connects.	integer	Minimum value: 120 Maximum value: 259200	0												
host-check-policy <name>	One or more policies to require the endpoint to have specific security software. Host check software list name.	string	Maximum length: 79													
ip-mode	Method by which users of this SSL-VPN tunnel obtain IP addresses.	option	-	range												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>range</i></td><td>Use the IP addresses available for all SSL-VPN users as defined by the SSL settings command.</td></tr><tr><td><i>user-group</i></td><td>Use the IP addresses associated with individual users or user groups (usually from external auth servers).</td></tr><tr><td><i>dhcp</i></td><td>Use IP addresses obtained from external DHCP server.</td></tr><tr><td><i>no-ip</i></td><td>Do not assign IP address.</td></tr></table>	Option	Description	<i>range</i>	Use the IP addresses available for all SSL-VPN users as defined by the SSL settings command.	<i>user-group</i>	Use the IP addresses associated with individual users or user groups (usually from external auth servers).	<i>dhcp</i>	Use IP addresses obtained from external DHCP server.	<i>no-ip</i>	Do not assign IP address.					
Option	Description															
<i>range</i>	Use the IP addresses available for all SSL-VPN users as defined by the SSL settings command.															
<i>user-group</i>	Use the IP addresses associated with individual users or user groups (usually from external auth servers).															
<i>dhcp</i>	Use IP addresses obtained from external DHCP server.															
<i>no-ip</i>	Do not assign IP address.															
ip-pools <name>	IPv4 firewall source address objects reserved for SSL-VPN tunnel mode clients. Address name.	string	Maximum length: 79													

Parameter	Description	Type	Size	Default						
ipv6-dns-server1	IPv6 DNS server 1.	ipv6-address	Not Specified	::						
ipv6-dns-server2	IPv6 DNS server 2.	ipv6-address	Not Specified	::						
ipv6-exclusive-routing	Enable/disable all IPv6 traffic go through tunnel only.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
ipv6-pools <name>	IPv6 firewall source address objects reserved for SSL-VPN tunnel mode clients. Address name.	string	Maximum length: 79							
ipv6-service-restriction	Enable/disable IPv6 tunnel service restriction.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
ipv6-split-tunneling	Enable/disable IPv6 split tunneling.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
ipv6-split-tunneling-routing-address <name>	IPv6 SSL-VPN tunnel mode firewall address objects that override firewall policy destination addresses to control split-tunneling access. Address name.	string	Maximum length: 79							
ipv6-split-tunneling-routing-negate	Enable to negate IPv6 split tunneling routing address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default						
ipv6-tunnel-mode	Enable/disable IPv6 SSL-VPN tunnel mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
ipv6-wins-server1	IPv6 WINS server 1.	ipv6-address	Not Specified	::						
ipv6-wins-server2	IPv6 WINS server 2.	ipv6-address	Not Specified	::						
keep-alive	Enable/disable automatic reconnect for FortiClient connections.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
limit-user-logins	Enable to limit each user to one SSL-VPN session at a time.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
mac-addr-action	Client MAC address action.	option	-	allow						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow connection when client MAC address is matched.</td></tr><tr><td><i>deny</i></td><td>Deny connection when client MAC address is matched.</td></tr></table>	Option	Description	<i>allow</i>	Allow connection when client MAC address is matched.	<i>deny</i>	Deny connection when client MAC address is matched.			
Option	Description									
<i>allow</i>	Allow connection when client MAC address is matched.									
<i>deny</i>	Deny connection when client MAC address is matched.									
mac-addr-check	Enable/disable MAC address host checking.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default						
macos-forticlient-download-url	Download URL for Mac FortiClient.	var-string	Maximum length: 1023							
name	Portal name.	string	Maximum length: 35							
os-check	Enable to let the FortiGate decide action based on client OS.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
prefer-ipv6-dns	Prefer to query IPv6 DNS server first if enabled.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
redir-url	Client login redirect URL.	var-string	Maximum length: 255							
rewrite-ip-uri-ui	Rewrite contents for URI contains IP and /ui/.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable contents rewrite for URI contains "IP-address/ui".</td></tr><tr><td>disable</td><td>Disable contents rewrite for URI contains "IP-address/ui".</td></tr></table>	Option	Description	enable	Enable contents rewrite for URI contains "IP-address/ui".	disable	Disable contents rewrite for URI contains "IP-address/ui".			
Option	Description									
enable	Enable contents rewrite for URI contains "IP-address/ui".									
disable	Disable contents rewrite for URI contains "IP-address/ui".									
save-password	Enable/disable FortiClient saving the user's password.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
service-restriction	Enable/disable tunnel service restriction.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									

Parameter	Description	Type	Size	Default								
skip-check-for-browser	Enable to skip host check for browser support.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
	Option	Description										
	<i>enable</i>	Enable setting.										
<i>disable</i>	Disable setting.											
skip-check-for-unsupported-os	Enable to skip host check if client OS does not support it.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
	Option	Description										
	<i>enable</i>	Enable setting.										
<i>disable</i>	Disable setting.											
smb-max-version	SMB maximum client protocol version.	option	-	smbv3								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>smbv1</i></td><td>SMB version 1.</td></tr><tr><td><i>smbv2</i></td><td>SMB version 2.</td></tr><tr><td><i>smbv3</i></td><td>SMB version 3.</td></tr></table>	Option	Description	<i>smbv1</i>	SMB version 1.	<i>smbv2</i>	SMB version 2.	<i>smbv3</i>	SMB version 3.

	Option	Description																																										
	<i>any</i>	Allow the server to choose the type of security.																																										
	<i>rdp</i>	Standard RDP encryption.																																										
	<i>nla</i>	Network Level Authentication.																																										
<i>tls</i>	TLS encryption.																																											
send-preconnection-id	Enable/disable sending of preconnection ID.	option	-	disable																																								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable sending of preconnection ID.		
	<i>disable</i>	Disable sending of preconnection ID.		
preconnection-id	The numeric ID of the RDP source.	integer	Minimum value: 0 Maximum value: 4294967295	0
preconnection-blob	An arbitrary string which identifies the RDP source.	var-string	Maximum length: 511	
load-balancing-info	The load balancing information or cookie which should be provided to the connection broker.	var-string	Maximum length: 511	
restricted-admin	Enable/disable restricted admin mode for RDP.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable restricted admin mode for RDP.		
	<i>disable</i>	Disable restricted admin mode for RDP.		
port	Remote port.	integer	Minimum value: 0 Maximum value: 65535	0
logon-user	Logon user.	var-string	Maximum length: 35	
logon-password	Logon password.	password	Not Specified	
color-depth	Color depth per pixel.	option	-	16
	<b>Option</b>	<b>Description</b>		
	32	32bits per pixel.		
	16	16bits per pixel.		
	8	8bits per pixel.		
sso	Single Sign-On.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable SSO.		
	<i>static</i>	Static SSO.		

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Auto SSO.</td></tr></table>	Option	Description	<i>auto</i>	Auto SSO.											
Option	Description															
<i>auto</i>	Auto SSO.															
sso-credential	Single sign-on credentials.	option	-	sslvpn-login												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sslvpn-login</i></td><td>SSL-VPN login.</td></tr><tr><td><i>alternative</i></td><td>Alternative.</td></tr></table>	Option	Description	<i>sslvpn-login</i>	SSL-VPN login.	<i>alternative</i>	Alternative.									
Option	Description															
<i>sslvpn-login</i>	SSL-VPN login.															
<i>alternative</i>	Alternative.															
sso-username	SSO user name.	var-string	Maximum length: 35													
sso-password	SSO password.	password	Not Specified													
sso-credential-sent-once	Single sign-on credentials are only sent once to remote server.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Single sign-on credentials are only sent once to remote server.</td></tr><tr><td><i>disable</i></td><td>Single sign-on credentials are sent to remote server for every HTTP request.</td></tr></table>	Option	Description	<i>enable</i>	Single sign-on credentials are only sent once to remote server.	<i>disable</i>	Single sign-on credentials are sent to remote server for every HTTP request.									
Option	Description															
<i>enable</i>	Single sign-on credentials are only sent once to remote server.															
<i>disable</i>	Single sign-on credentials are sent to remote server for every HTTP request.															
width	Screen width.	integer	Minimum value: 0 Maximum value: 65535	0												
height	Screen height.	integer	Minimum value: 0 Maximum value: 65535	0												
vnc-keyboard-layout	Keyboard layout.	option	-	default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>Default.</td></tr><tr><td><i>da</i></td><td>Danish.</td></tr><tr><td><i>nl</i></td><td>Dutch.</td></tr><tr><td><i>en-uk</i></td><td>English, United Kingdom.</td></tr><tr><td><i>en-uk-ext</i></td><td>English, United Kingdom Extended.</td></tr></table>	Option	Description	<i>default</i>	Default.	<i>da</i>	Danish.	<i>nl</i>	Dutch.	<i>en-uk</i>	English, United Kingdom.	<i>en-uk-ext</i>	English, United Kingdom Extended.			
Option	Description															
<i>default</i>	Default.															
<i>da</i>	Danish.															
<i>nl</i>	Dutch.															
<i>en-uk</i>	English, United Kingdom.															
<i>en-uk-ext</i>	English, United Kingdom Extended.															

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>fi</i>	Finnish.		
	<i>fr</i>	French.		
	<i>fr-be</i>	French, Belgium.		
	<i>fr-ca-mul</i>	French, Canadian Multilingual Std.		
	<i>de</i>	German.		
	<i>de-ch</i>	German, Switzerland.		
	<i>it</i>	Italian.		
	<i>it-142</i>	Italian (142).		
	<i>pt</i>	Portuguese.		
	<i>pt-br-abnt2</i>	Portuguese (Brazilian ABNT2).		
	<i>no</i>	Norwegian.		
	<i>gd</i>	Scottish Gaelic.		
	<i>es</i>	Spanish.		
	<i>sv</i>	Swedish.		
	<i>us-intl</i>	United States-International.		

#### config form-data

value	Value.	var-string	Maximum length: 63	

## waf

This section includes syntax for the following commands:

- [config waf main-class on page 1812](#)
- [config waf profile on page 1812](#)
- [config waf signature on page 1837](#)
- [config waf sub-class on page 1838](#)

### config waf main-class

Hidden table for datasource.

```
config waf main-class
    Description: Hidden table for datasource.
    edit <id>
        set name {string}
    next
end
```

### config waf main-class

Parameter	Description	Type	Size	Default
id	Main signature class ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Main signature class name.	string	Maximum length: 127	

### config waf profile

Configure Web application firewall configuration.

```
config waf profile
    Description: Configure Web application firewall configuration.
    edit <name>
        config address-list
            Description: Address block and allow lists.
            set status [enable|disable]
            set blocked-log [enable|disable]
            set severity [high|medium|...]
            set trusted-address <name1>, <name2>, ...
```

```

        set blocked-address <name1>, <name2>, ...
    end
    set comment {var-string}
    config constraint
        Description: WAF HTTP protocol restrictions.
        config header-length
            Description: HTTP header length in request.
            set status [enable|disable]
            set length {integer}
            set action [allow|block]
            set log [enable|disable]
            set severity [high|medium|...]
        end
        config content-length
            Description: HTTP content length in request.
            set status [enable|disable]
            set length {integer}
            set action [allow|block]
            set log [enable|disable]
            set severity [high|medium|...]
        end
        config param-length
            Description: Maximum length of parameter in URL, HTTP POST request or HTTP
body.
            set status [enable|disable]
            set length {integer}
            set action [allow|block]
            set log [enable|disable]
            set severity [high|medium|...]
        end
        config line-length
            Description: HTTP line length in request.
            set status [enable|disable]
            set length {integer}
            set action [allow|block]
            set log [enable|disable]
            set severity [high|medium|...]
        end
        config url-param-length
            Description: Maximum length of parameter in URL.
            set status [enable|disable]
            set length {integer}
            set action [allow|block]
            set log [enable|disable]
            set severity [high|medium|...]
        end
        config version
            Description: Enable/disable HTTP version check.
            set status [enable|disable]
            set action [allow|block]
            set log [enable|disable]
            set severity [high|medium|...]
        end
        config method
            Description: Enable/disable HTTP method check.
            set status [enable|disable]

```

```

        set action [allow|block]
        set log [enable|disable]
        set severity [high|medium|...]
    end
    config hostname
        Description: Enable/disable hostname check.
        set status [enable|disable]
        set action [allow|block]
        set log [enable|disable]
        set severity [high|medium|...]
    end
    config malformed
        Description: Enable/disable malformed HTTP request check.
        set status [enable|disable]
        set action [allow|block]
        set log [enable|disable]
        set severity [high|medium|...]
    end
    config max-cookie
        Description: Maximum number of cookies in HTTP request.
        set status [enable|disable]
        set max-cookie {integer}
        set action [allow|block]
        set log [enable|disable]

	<b>Option</b>	<b>Description</b>		
	<i>high</i>	High severity.		
	<i>medium</i>	Medium severity.		
	<i>low</i>	Low severity.		

#### config max-range-segment

Parameter	Description	Type	Size	Default
status	Enable/disable the constraint.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
max-range-segment	Maximum number of range segments in HTTP range line (0 to 2147483647).	integer	Minimum value: 0 Maximum value: 2147483647	5
action	Action.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow.		
	<i>block</i>	Block.		
log	Enable/disable logging.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
severity	Severity.	option	-	medium
	<b>Option</b>	<b>Description</b>		
	<i>high</i>	High severity.		
	<i>medium</i>	Medium severity.		
	<i>low</i>	Low severity.		

### config exception

Parameter	Description	Type	Size	Default
id	Exception ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
pattern	URL pattern.	string	Maximum length: 511	
regex	Enable/disable regular expression based pattern match.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
address	Host address.	string	Maximum length: 79	
header-length	HTTP header length in request.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
content-length	HTTP content length in request.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
param-length	Maximum length of parameter in URL, HTTP POST request or HTTP body.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
line-length	HTTP line length in request.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
url-param-length	Maximum length of parameter in URL.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
version	Enable/disable HTTP version check.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
method	Enable/disable HTTP method check.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
hostname	Enable/disable hostname check.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
malformed	Enable/disable malformed HTTP request check.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
max-cookie	Maximum number of cookies in HTTP request.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
max-header-line	Maximum number of HTTP header line.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
max-url-param	Maximum number of parameters in URL.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
max-range-segment	Maximum number of range segments in HTTP range line.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

### config method

Parameter	Description	Type	Size	Default
status	Enable/disable the constraint.	option	-	disable
action	Action.	option	-	allow
log	Enable/disable logging.	option	-	disable
severity	Severity.	option	-	medium

### config method

Parameter	Description	Type	Size	Default
status	Status.	option	-	disable
log	Enable/disable logging.	option	-	disable
severity	Severity.	option	-	medium
default-allowed-methods	Methods.	option	-	

### config method-policy

Parameter	Description	Type	Size	Default
id	HTTP method policy ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
pattern	URL pattern.	string	Maximum length: 511	
regex	Enable/disable regular expression based pattern match.	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
address	Host address.	string	Maximum length: 79	
allowed-methods	Allowed Methods.	option	-	

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>get</i>	HTTP GET method.		
	<i>post</i>	HTTP POST method.		
	<i>put</i>	HTTP PUT method.		
	<i>head</i>	HTTP HEAD method.		
	<i>connect</i>	HTTP CONNECT method.		
	<i>trace</i>	HTTP TRACE method.		
	<i>options</i>	HTTP OPTIONS method.		
	<i>delete</i>	HTTP DELETE method.		
	<i>others</i>	Other HTTP methods.		

### config signature

Parameter	Description	Type	Size	Default
disabled-sub-class <id>	Disabled signature subclasses. Signature subclass ID.	integer	Minimum value: 0 Maximum value: 4294967295	
disabled-signature <id>	Disabled signatures. Signature ID.	integer	Minimum value: 0 Maximum value: 4294967295	
credit-card-detection-threshold	The minimum number of Credit cards to detect violation.	integer	Minimum value: 0 Maximum value: 128	3

### config main-class

Parameter	Description	Type	Size	Default
id	Main signature class ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
status	Status.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
action	Action.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow.		
	<i>block</i>	Block.		
	<i>erase</i>	Erase credit card numbers.		
log	Enable/disable logging.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
severity	Severity.	option	-	medium
	<b>Option</b>	<b>Description</b>		
	<i>high</i>	High severity.		
	<i>medium</i>	Medium severity.		
	<i>low</i>	Low severity.		

#### config custom-signature

Parameter	Description	Type	Size	Default
name	Signature name.	string	Maximum length: 35	
status	Status.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
action	Action.	option	-	allow

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow.		
	<i>block</i>	Block.		
	<i>erase</i>	Erase credit card numbers.		
log	Enable/disable logging.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
severity	Severity.	option	-	medium
	<b>Option</b>	<b>Description</b>		
	<i>high</i>	High severity.		
	<i>medium</i>	Medium severity.		
	<i>low</i>	Low severity.		
direction	Traffic direction.	option	-	request
	<b>Option</b>	<b>Description</b>		
	<i>request</i>	Match HTTP request.		
	<i>response</i>	Match HTTP response.		
case-sensitivity	Case sensitivity in pattern.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Case insensitive in pattern.		
	<i>enable</i>	Case sensitive in pattern.		
pattern	Match pattern.	string	Maximum length: 511	
target	Match HTTP target.	option	-	
	<b>Option</b>	<b>Description</b>		
	<i>arg</i>	HTTP arguments.		
	<i>arg-name</i>	Names of HTTP arguments.		
	<i>req-body</i>	HTTP request body.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>req-cookie</i>	HTTP request cookies.		
	<i>req-cookie-name</i>	HTTP request cookie names.		
	<i>req-filename</i>	HTTP request file name.		
	<i>req-header</i>	HTTP request headers.		
	<i>req-header-name</i>	HTTP request header names.		
	<i>req-raw-uri</i>	Raw URI of HTTP request.		
	<i>req-uri</i>	URI of HTTP request.		
	<i>resp-body</i>	HTTP response body.		
	<i>resp-hdr</i>	HTTP response headers.		
	<i>resp-status</i>	HTTP response status.		

### config url-access

Parameter	Description	Type	Size	Default
id	URL access ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
address	Host address.	string	Maximum length: 79	
action	Action.	option	-	permit
	<b>Option</b>	<b>Description</b>		
	<i>bypass</i>	Allow the HTTP request, also bypass further WAF scanning.		
	<i>permit</i>	Allow the HTTP request, and continue further WAF scanning.		
	<i>block</i>	Block HTTP request.		
log	Enable/disable logging.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

Parameter	Description	Type	Size	Default
severity	Severity.	option	-	medium
	<b>Option</b>	<b>Description</b>		
	<i>high</i>	High severity.		
	<i>medium</i>	Medium severity.		
	<i>low</i>	Low severity.		

### config access-pattern

Parameter	Description	Type	Size	Default
id	URL access pattern ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
srcaddr	Source address.	string	Maximum length: 79	
pattern	URL pattern.	string	Maximum length: 511	
regex	Enable/disable regular expression based pattern match.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
negate	Enable/disable match negation.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

### config waf signature

Hidden table for datasource.

```
config waf signature
  Description: Hidden table for datasource.
  edit <id>
    set desc {string}
```

```
next
end
```

## config waf signature

Parameter	Description	Type	Size	Default
desc	Signature description.	string	Maximum length: 511	
id	Signature ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

## config waf sub-class

Hidden table for datasource.

```
config waf sub-class
  Description: Hidden table for datasource.
  edit <id>
    set name {string}
  next
end
```

## config waf sub-class

Parameter	Description	Type	Size	Default
id	Signature subclass ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Signature subclass name.	string	Maximum length: 127	

## wanopt

This section includes syntax for the following commands:

- [config wanopt auth-group on page 1839](#)
- [config wanopt cache-service on page 1841](#)
- [config wanopt content-delivery-network-rule on page 1844](#)
- [config wanopt peer on page 1850](#)
- [config wanopt profile on page 1851](#)
- [config wanopt remote-storage on page 1859](#)
- [config wanopt settings on page 1860](#)
- [config wanopt webcache on page 1862](#)

### config wanopt auth-group

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101E, FortiGate 101F, FortiGate 1101E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 61E, FortiGate 61F, FortiGate 71F, FortiGate 800D, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 91E, FortiGate VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 1100E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 70F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 90E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 80F 2R.

Configure WAN optimization authentication groups.

```
config wanopt auth-group
  Description: Configure WAN optimization authentication groups.
  edit <name>
    set auth-method [cert|psk]
    set cert {string}
```

```

        set peer {string}
        set peer-accept [any|defined|...]
        set psk {password}
    next
end

```

## config wanopt auth-group

Parameter	Description	Type	Size	Default
auth-method	Select certificate or pre-shared key authentication for this authentication group.	option	-	cert
	<b>Option</b>	<b>Description</b>		
	<i>cert</i>	Certificate authentication.		
	<i>psk</i>	Pre-shared secret key authentication.		
cert	Name of certificate to identify this peer.	string	Maximum length: 35	
name	Auth-group name.	string	Maximum length: 35	
peer	If peer-accept is set to one, select the name of one peer to add to this authentication group. The peer must have added with the wanopt peer command.	string	Maximum length: 35	
peer-accept	Determine if this auth group accepts, any peer, a list of defined peers, or just one peer.	option	-	any
	<b>Option</b>	<b>Description</b>		
	<i>any</i>	Accept any peer that can authenticate with this auth group.		
	<i>defined</i>	Accept only the peers added with the wanopt peer command.		
	<i>one</i>	Accept the peer added to this auth group using the peer option.		
psk	Pre-shared key used by the peers in this authentication group.	password	Not Specified

Parameter	Description	Type	Size	Default								
acceptable-connections	Set strategy when accepting cache collaboration connection.	option	-	any								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>We can accept any cache-collaboration connection.</td></tr><tr><td><i>peers</i></td><td>We can only accept connections that are already in src-peers.</td></tr></table>	Option	Description	<i>any</i>	We can accept any cache-collaboration connection.	<i>peers</i>	We can only accept connections that are already in src-peers.					
Option	Description											
<i>any</i>	We can accept any cache-collaboration connection.											
<i>peers</i>	We can only accept connections that are already in src-peers.											
collaboration	Enable/disable cache-collaboration between cache-service clusters.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable cache cache-collaboration.</td></tr><tr><td><i>disable</i></td><td>Disable cache cache-collaboration.</td></tr></table>	Option	Description	<i>enable</i>	Enable cache cache-collaboration.	<i>disable</i>	Disable cache cache-collaboration.					
Option	Description											
<i>enable</i>	Enable cache cache-collaboration.											
<i>disable</i>	Disable cache cache-collaboration.											
device-id	Set identifier for this cache device.	string	Maximum length: 35	default_dev_id								
prefer-scenario	Set the preferred cache behavior towards the balance between latency and hit-ratio.	option	-	balance								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>balance</i></td><td>Balance between speed and cache hit ratio.</td></tr><tr><td><i>prefer-speed</i></td><td>Prefer response speed at the expense of increased cache bypasses.</td></tr><tr><td><i>prefer-cache</i></td><td>Prefer improving hit-ratio through increasing latency tolerance.</td></tr></table>	Option	Description	<i>balance</i>	Balance between speed and cache hit ratio.	<i>prefer-speed</i>	Prefer response speed at the expense of increased cache bypasses.	<i>prefer-cache</i>	Prefer improving hit-ratio through increasing latency tolerance.			
Option	Description											
<i>balance</i>	Balance between speed and cache hit ratio.											
<i>prefer-speed</i>	Prefer response speed at the expense of increased cache bypasses.											
<i>prefer-cache</i>	Prefer improving hit-ratio through increasing latency tolerance.											

## config dst-peer

Parameter	Description	Type	Size	Default
device-id	Device ID of this peer.	string	Maximum length: 35	
auth-type	Set authentication type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
encode-type	Set encode type for this peer.	integer	Minimum value: 0 Maximum value: 255	0

Parameter	Description	Type	Size	Default
priority	Set priority for this peer.	integer	Minimum value: 0 Maximum value: 255	1
ip	Set cluster IP address of this peer.	ipv4-address-any	Not Specified	0.0.0.0

### config src-peer

Parameter	Description	Type	Size	Default
device-id	Device ID of this peer.	string	Maximum length: 35	
auth-type	Set authentication type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
encode-type	Set encode type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
priority	Set priority for this peer.	integer	Minimum value: 0 Maximum value: 255	1
ip	Set cluster IP address of this peer.	ipv4-address-any	Not Specified	0.0.0.0

```

## config wanopt content-delivery-network-rule

Parameter	Description	Type	Size	Default						
category	Content delivery network rule category.	option	-	vcache						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>vcache</td><td>Vcache content delivery network.</td></tr><tr><td>youtube</td><td>Youtube content delivery network.</td></tr></table>	Option	Description	vcache	Vcache content delivery network.	youtube	Youtube content delivery network.			
	Option	Description								
	vcache	Vcache content delivery network.								
youtube	Youtube content delivery network.									
comment	Comment about this CDN-rule.	var-string	Maximum length: 255							
host-domain-name-suffix <name>	Suffix portion of the fully qualified domain name. For example, fortinet.com in "www.fortinet.com". Suffix portion of the fully qualified domain name.	string	Maximum length: 79							
name	Name of table.	string	Maximum length: 35							
request-cache-control	Enable/disable HTTP request cache control.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
	Option	Description								
	enable	Enable setting.								
disable	Disable setting.									
response-cache-control	Enable/disable HTTP response cache control.	option	-	disable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
response-expires	Enable/disable HTTP response cache expires.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
status	Enable/disable WAN optimization content delivery network rules.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
updateserver	Enable/disable update server.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

## config rules

Parameter	Description	Type	Size	Default
name	WAN optimization content delivery network rule name.	string	Maximum length: 35	
match-mode	Match criteria for collecting content ID.	option	-	all
	<b>Option</b>	<b>Description</b>		
	<i>all</i>	Must match all of the match entries.		
	<i>any</i>	Must match any of the match entries.		
skip-rule-mode	Skip mode when evaluating skip-rules.	option	-	all

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>all</i>	Must match all skip entries.		
	<i>any</i>	Must match any skip entries.		

#### config match-entries

Parameter	Description	Type	Size	Default
id	Rule ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
target	Option in HTTP header or URL parameter to match.	option	-	path
	<b>Option</b>	<b>Description</b>		
	<i>path</i>	Match with the URL path.		
	<i>parameter</i>	Match with the URL parameters.		
	<i>referrer</i>	Match with the Referrer option in HTTP header.		
	<i>youtube-map</i>	Match Youtube content-id collection.		
	<i>youtube-id</i>	Match Youtube content-id.		
	<i>youku-id</i>	Match Youku content-id.		
pattern <string>	Pattern string for matching target (Referrer or URL pattern). For example, a, a*c, *a*, a*c*e, and *. Pattern strings.	string	Maximum length: 79	

#### config skip-entries

Parameter	Description	Type	Size	Default
id	Rule ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
target	Option in HTTP header or URL parameter to match.	option	-	path

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>path</i>	Match with the URL path.		
	<i>parameter</i>	Match with the URL parameters.		
	<i>referrer</i>	Match with the Referrer option in HTTP header.		
	<i>youtube-map</i>	Match Youtube content-id collection.		
	<i>youtube-id</i>	Match Youtube content-id.		
	<i>youku-id</i>	Match Youku content-id.		
pattern <string>	Pattern string for matching target (Referrer or URL pattern). For example, a, a*c, *a*, a*c*e, and *. Pattern strings.	string	Maximum length: 79	

### config content-id

Parameter	Description	Type	Size	Default
target	Option in HTTP header or URL parameter to match.	option	-	path
	<b>Option</b>	<b>Description</b>		
	<i>path</i>	Match with the URL path.		
	<i>parameter</i>	Match with the URL parameters.		
	<i>referrer</i>	Match with the Referrer option in HTTP header.		
	<i>youtube-map</i>	Match Youtube content-id collection.		
	<i>youtube-id</i>	Match Youtube content-id.		
	<i>youku-id</i>	Match Youku content-id.		
	<i>hls-manifest</i>	Match with HLS manifest.		
	<i>dash-manifest</i>	Match with DASH manifest.		
	<i>hls-fragment</i>	Match HLS stream fragment.		
	<i>dash-fragment</i>	Match DASH stream fragment.		
start-str	String from which to start search.	string	Maximum length: 35	
start-skip	Number of characters in URL to skip after start-str has been matched.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
start-direction	Search direction from start-str match.	option	-	forward
	<b>Option</b>	<b>Description</b>		
	<i>forward</i>	Forward direction.		
	<i>backward</i>	Backward direction.		
end-str	String from which to end search.	string	Maximum length: 35	
end-skip	Number of characters in URL to skip after end-str has been matched.	integer	Minimum value: 0 Maximum value: 4294967295	0
end-direction	Search direction from end-str match.	option	-	forward
	<b>Option</b>	<b>Description</b>		
	<i>forward</i>	Forward direction.		
	<i>backward</i>	Backward direction.		
range-str	Name of content ID within the start string and end string.	string	Maximum length: 35

end

```

## config wanopt profile

Parameter	Description	Type	Size	Default
auth-group	Optionally add an authentication group to restrict access to the WAN Optimization tunnel to peers in the authentication group.	string	Maximum length: 35	
comments	Comment.	var-string	Maximum length: 255	
name	Profile name.	string	Maximum length: 35	
transparent	Enable/disable transparent mode.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Determine if WAN Optimization changes client packet source addresses. Affects the routing configuration on the server network.		
	<i>disable</i>	Disable transparent mode. Client packets source addresses are changed to the source address of the FortiGate internal interface. Similar to source NAT.		

## config cifs

Parameter	Description	Type	Size	Default
status	Enable/disable WAN Optimization.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WAN Optimization.		
	<i>disable</i>	Disable WAN Optimization.		
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable SSL-secured tunnelling.		
	<i>disable</i>	Disable SSL-secured tunnelling.		
byte-caching	Enable/disable byte-caching. Byte caching reduces the amount of traffic by caching file data sent across the WAN and in future serving if from the cache.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable byte-caching.		
	<i>disable</i>	Disable byte-caching.		
prefer-chunking	Select dynamic or fixed-size data chunking for WAN Optimization.	option	-	fix
	<b>Option</b>	<b>Description</b>		
	<i>dynamic</i>	Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.		
	<i>fix</i>	Select fixed data chunking.		
protocol-opt	Select protocol specific optimization or generic TCP optimization.	option	-	protocol

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>protocol</i>	Using protocol-specific optimization.		
	<i>tcp</i>	Using generic TCP optimization.		
tunnel-sharing	Tunnel sharing mode for aggressive/non-aggressive and/or interactive/non-interactive protocols.	option	-	private
	<b>Option</b>	<b>Description</b>		
	<i>shared</i>	For profiles that accept nonaggressive and non-interactive protocols.		
	<i>express-shared</i>	For profiles that accept interactive protocols such as Telnet.		
	<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.		

## config ftp

Parameter	Description	Type	Size	Default
status	Enable/disable WAN Optimization.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WAN Optimization.		
	<i>disable</i>	Disable WAN Optimization.		
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable SSL-secured tunnelling.		
	<i>disable</i>	Disable SSL-secured tunnelling.		
byte-caching	Enable/disable byte-caching. Byte caching reduces the amount of traffic by caching file data sent across the WAN and in future serving it from the cache.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable byte-caching.		
	<i>disable</i>	Disable byte-caching.		

Parameter	Description	Type	Size	Default								
prefer-chunking	Select dynamic or fixed-size data chunking for WAN Optimization.	option	-	fix								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dynamic</i></td><td>Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.</td></tr><tr><td><i>fix</i></td><td>Select fixed data chunking.</td></tr></table>	Option	Description	<i>dynamic</i>	Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.	<i>fix</i>	Select fixed data chunking.					
Option	Description											
<i>dynamic</i>	Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.											
<i>fix</i>	Select fixed data chunking.											
protocol-opt	Select protocol specific optimization or generic TCP optimization.	option	-	protocol								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>protocol</i></td><td>Using protocol-specific optimization.</td></tr><tr><td><i>tcp</i></td><td>Using generic TCP optimization.</td></tr></table>	Option	Description	<i>protocol</i>	Using protocol-specific optimization.	<i>tcp</i>	Using generic TCP optimization.					
Option	Description											
<i>protocol</i>	Using protocol-specific optimization.											
<i>tcp</i>	Using generic TCP optimization.											
tunnel-sharing	Tunnel sharing mode for aggressive/non-aggressive and/or interactive/non-interactive protocols.	option	-	private								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>shared</i></td><td>For profiles that accept nonaggressive and non-interactive protocols.</td></tr><tr><td><i>express-shared</i></td><td>For profiles that accept interactive protocols such as Telnet.</td></tr><tr><td><i>private</i></td><td>For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.</td></tr></table>	Option	Description	<i>shared</i>	For profiles that accept nonaggressive and non-interactive protocols.	<i>express-shared</i>	For profiles that accept interactive protocols such as Telnet.	<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.			
Option	Description											
<i>shared</i>	For profiles that accept nonaggressive and non-interactive protocols.											
<i>express-shared</i>	For profiles that accept interactive protocols such as Telnet.											
<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.											

## config http

Parameter	Description	Type	Size	Default						
status	Enable/disable WAN Optimization.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WAN Optimization.</td></tr><tr><td><i>disable</i></td><td>Disable WAN Optimization.</td></tr></table>				Option	Description	<i>enable</i>	Enable WAN Optimization.	<i>disable</i>	Disable WAN Optimization.
	Option	Description								
	<i>enable</i>	Enable WAN Optimization.								
	<i>disable</i>	Disable WAN Optimization.								
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-secured tunnelling.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-secured tunnelling.</td></tr></table>				Option	Description	<i>enable</i>	Enable SSL-secured tunnelling.	<i>disable</i>	Disable SSL-secured tunnelling.

<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.											

## config tcp

Parameter	Description	Type	Size	Default
status	Enable/disable WAN Optimization.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WAN Optimization.		
	<i>disable</i>	Disable WAN Optimization.		
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable SSL-secured tunnelling.		
	<i>disable</i>	Disable SSL-secured tunnelling.		
byte-caching	Enable/disable byte-caching. Byte caching reduces the amount of traffic by caching file data sent across the WAN and in future serving if from the cache.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable byte-caching.		
	<i>disable</i>	Disable byte-caching.		
byte-caching-opt	Select whether TCP byte-caching uses system memory only or both memory and disk space.	option	-	mem-only
	<b>Option</b>	<b>Description</b>		
	<i>mem-only</i>	Byte caching with memory only.		
	<i>mem-disk</i>	Byte caching with memory and disk.		
tunnel-sharing	Tunnel sharing mode for aggressive/non-aggressive and/or interactive/non-interactive protocols.	option	-	private
	<b>Option</b>	<b>Description</b>		
	<i>shared</i>	For profiles that accept nonaggressive and non-interactive protocols.		
	<i>express-shared</i>	For profiles that accept interactive protocols such as Telnet.		
	<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.		
port	Port numbers or port number ranges for TCP. Only packets with a destination port number that matches this port number or range are accepted by this profile.	user	Not Specified	

Parameter	Description	Type	Size	Default
ssl	Enable/disable SSL/TLS offloading (hardware acceleration) for traffic in this tunnel.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable SSL/TLS offloading.		
	<i>disable</i>	Disable SSL/TLS offloading.		
ssl-port	Port numbers or port number ranges on which to expect HTTPS traffic for SSL/TLS offloading.	user	Not Specified	

## config wanopt remote-storage

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101E, FortiGate 101F, FortiGate 1101E, FortiGate 1500DT, FortiGate 1500D, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 61E, FortiGate 61F, FortiGate 71F, FortiGate 800D, FortiGate 81E-POE, FortiGate 81E, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 91E, FortiGate VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 61E, FortiWiFi 61F, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 1100E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 70F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 90E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 80F 2R.

Configure a remote cache device as Web cache storage.

```
config wanopt remote-storage
    Description: Configure a remote cache device as Web cache storage.
    set local-cache-id {string}
    set remote-cache-id {string}
    set remote-cache-ip {ipv4-address-any}
    set status [disable|enable]
end
```

## config wanopt remote-storage

Parameter	Description	Type	Size	Default
local-cache-id	ID that this device uses to connect to the remote device.	string	Maximum length: 35	
remote-cache-id	ID of the remote device to which the device connects.	string	Maximum length: 35	
remote-cache-ip	IP address of the remote device to which the device connects.	ipv4-address-any	Not Specified	0.0.0.0
status	Enable/disable using remote device as Web cache storage.	option	-	disable
		Option	Description	
		disable	Use local disks as Web cache storage.	
		enable	Use a remote device as Web cache storage.	

## config wanopt settings

It is not available for: FortiGate 1000F, FortiGate 100EF, FortiGate 100E, FortiGate 100F, FortiGate 1100E, FortiGate 140E-POE, FortiGate 140E, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60E DSLJ, FortiGate 60E DSL, FortiGate 60E-POE, FortiGate 60E, FortiGate 60F, FortiGate 70F, FortiGate 80E-POE, FortiGate 80E, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 90E, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60E DSLJ, FortiWiFi 60E DSL, FortiWiFi 60E, FortiWiFi 60F, FortiWiFi 80F 2R.

Configure WAN optimization settings.

```

config wanopt settings
    Description: Configure WAN optimization settings.
    set auto-detect-algorithm [simple|diff-req-resp]
    set host-id {string}
    set tunnel-optimization [memory-usage|balanced|...]
    set tunnel-ssl-algorithm [high|medium|...]
end

```

## config wanopt settings

Parameter	Description	Type	Size	Default								
auto-detect-algorithm	Auto detection algorithms used in tunnel negotiations.	option	-	simple								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>simple</i></td><td>Use the same TCP option value in SYN/SYNACK packets. Backward compatible.</td></tr><tr><td><i>diff-req-resp</i></td><td>Use different TCP option values in SYN/SYNACK packets to avoid false positive detection.</td></tr></table>				Option	Description	<i>simple</i>	Use the same TCP option value in SYN/SYNACK packets. Backward compatible.	<i>diff-req-resp</i>	Use different TCP option values in SYN/SYNACK packets to avoid false positive detection.		
Option	Description											
<i>simple</i>	Use the same TCP option value in SYN/SYNACK packets. Backward compatible.											
<i>diff-req-resp</i>	Use different TCP option values in SYN/SYNACK packets to avoid false positive detection.											
host-id	Local host ID (must also be entered in the remote FortiGate's peer list).	string	Maximum length: 35	default-id								
tunnel-optimization	WANOpt tunnel optimization option.	option	-	balanced **								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>memory-usage</i></td><td>Optimize tunnel for low system memory usage.</td></tr><tr><td><i>balanced</i></td><td>Optimize tunnel to balance between system memory usage and throughput.</td></tr><tr><td><i>throughput</i></td><td>Optimize tunnel for throughput.</td></tr></table>				Option	Description	<i>memory-usage</i>	Optimize tunnel for low system memory usage.	<i>balanced</i>	Optimize tunnel to balance between system memory usage and throughput.	<i>throughput</i>	Optimize tunnel for throughput.
Option	Description											
<i>memory-usage</i>	Optimize tunnel for low system memory usage.											
<i>balanced</i>	Optimize tunnel to balance between system memory usage and throughput.											
<i>throughput</i>	Optimize tunnel for throughput.											
tunnel-ssl-algorithm	Relative strength of encryption algorithms accepted during tunnel negotiation.	option	-	high								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>high</i></td><td>High encryption. Allow only AES and ChaCha.</td></tr><tr><td><i>medium</i></td><td>Medium encryption. Allow AES, ChaCha, 3DES, and RC4.</td></tr><tr><td><i>low</i></td><td>Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.</td></tr></table>				Option	Description	<i>high</i>	High encryption. Allow only AES and ChaCha.	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.
Option	Description											
<i>high</i>	High encryption. Allow only AES and ChaCha.											
<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.											
<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.

## config wanopt webcache

Parameter	Description	Type	Size	Default						
always-revalidate	Enable/disable revalidation of requested cached objects, which have content on the server, before serving it to the client.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable revalidation of requested cached objects.</td></tr><tr><td><i>disable</i></td><td>Disable revalidation of requested cached objects.</td></tr></table>	Option	Description	<i>enable</i>	Enable revalidation of requested cached objects.	<i>disable</i>	Disable revalidation of requested cached objects.			
Option	Description									
<i>enable</i>	Enable revalidation of requested cached objects.									
<i>disable</i>	Disable revalidation of requested cached objects.									
cache-by-default	Enable/disable caching content that lacks explicit caching policies from the server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable caching content that lacks explicit caching policies.</td></tr><tr><td><i>disable</i></td><td>Disable caching content that lacks explicit caching policies.</td></tr></table>	Option	Description	<i>enable</i>	Enable caching content that lacks explicit caching policies.	<i>disable</i>	Disable caching content that lacks explicit caching policies.			
Option	Description									
<i>enable</i>	Enable caching content that lacks explicit caching policies.									
<i>disable</i>	Disable caching content that lacks explicit caching policies.									
cache-cookie	Enable/disable caching cookies. Since cookies contain information for or about individual users, they not usually cached.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Cache cookies.</td></tr><tr><td><i>disable</i></td><td>Do not cache cookies.</td></tr></table>	Option	Description	<i>enable</i>	Cache cookies.	<i>disable</i>	Do not cache cookies.			
Option	Description									
<i>enable</i>	Cache cookies.									
<i>disable</i>	Do not cache cookies.									
cache-expired	Enable/disable caching type-1 objects that are already expired on arrival.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
default-ttl	Default object expiry time. This only applies to those objects that do not have an expiry time set by the web server.	integer	Minimum value: 1 Maximum value: 5256000	1440						
external	Enable/disable external Web caching.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable external Web caching.</td></tr><tr><td><i>disable</i></td><td>Disable external Web caching.</td></tr></table>	Option	Description	<i>enable</i>	Enable external Web caching.	<i>disable</i>	Disable external Web caching.			
Option	Description									
<i>enable</i>	Enable external Web caching.									
<i>disable</i>	Disable external Web caching.									

Parameter	Description	Type	Size	Default						
fresh-factor	Frequency that the server is checked to see if any objects have expired. The higher the fresh factor, the less often the checks occur.	integer	Minimum value: 1 Maximum value: 100	100						
host-validate	Enable/disable validating "Host:" with original server IP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable validating "Host:" with original server IP.</td></tr><tr><td><i>disable</i></td><td>Disable validating "Host:" with original server IP.</td></tr></table>	Option	Description	<i>enable</i>	Enable validating "Host:" with original server IP.	<i>disable</i>	Disable validating "Host:" with original server IP.			
Option	Description									
<i>enable</i>	Enable validating "Host:" with original server IP.									
<i>disable</i>	Disable validating "Host:" with original server IP.									
ignore-conditional	Enable/disable controlling the behavior of cache-control HTTP 1.1 header values.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring cache-control HTTP 1.1 header values.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring cache-control HTTP 1.1 header values.</td></tr></table>	Option	Description	<i>enable</i>	Enable ignoring cache-control HTTP 1.1 header values.	<i>disable</i>	Disable ignoring cache-control HTTP 1.1 header values.			
Option	Description									
<i>enable</i>	Enable ignoring cache-control HTTP 1.1 header values.									
<i>disable</i>	Disable ignoring cache-control HTTP 1.1 header values.									
ignore-ie-reload	Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.</td></tr><tr><td><i>disable</i></td><td>Disable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.</td></tr></table>	Option	Description	<i>enable</i>	Enable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.	<i>disable</i>	Disable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.			
Option	Description									
<i>enable</i>	Enable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.									
<i>disable</i>	Disable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.									
ignore-ims	Enable/disable ignoring the if-modified-since (IMS) header.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring the if-modified-since (IMS) header.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring the if-modified-since (IMS) header.</td></tr></table>	Option	Description	<i>enable</i>	Enable ignoring the if-modified-since (IMS) header.	<i>disable</i>	Disable ignoring the if-modified-since (IMS) header.			
Option	Description									
<i>enable</i>	Enable ignoring the if-modified-since (IMS) header.									
<i>disable</i>	Disable ignoring the if-modified-since (IMS) header.									
ignore-pnc	Enable/disable ignoring the pragma no-cache (PNC) header.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring the pragma no-cache (PNC) header.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring the pragma no-cache (PNC) header.</td></tr></table>	Option	Description	<i>enable</i>	Enable ignoring the pragma no-cache (PNC) header.	<i>disable</i>	Disable ignoring the pragma no-cache (PNC) header.			
Option	Description									
<i>enable</i>	Enable ignoring the pragma no-cache (PNC) header.									
<i>disable</i>	Disable ignoring the pragma no-cache (PNC) header.									

Parameter	Description	Type	Size	Default
max-object-size	Maximum cacheable object size in kB. All objects that exceed this are delivered to the client but not stored in the web cache.	integer	Minimum value: 1 Maximum value: 2147483	512000
max-ttl	Maximum time an object can stay in the web cache without checking to see if it has expired on the server.	integer	Minimum value: 1 Maximum value: 5256000	7200
min-ttl	Minimum time an object can stay in the web cache without checking to see if it has expired on the server.	integer	Minimum value: 1 Maximum value: 5256000	5
neg-resp-time	Time in minutes to cache negative responses or errors.	integer	Minimum value: 0 Maximum value: 4294967295	0
reval-pnc	Enable/disable revalidation of pragma-no-cache (PNC) to address bandwidth concerns.	option	-	disable
		Option	Description	
		<i>enable</i>	Enable revalidation of pragma-no-cache (PNC).	
		<i>disable</i>	Disable revalidation of pragma-no-cache (PNC).	

# web-proxy

This section includes syntax for the following commands:

- [config web-proxy debug-url on page 1866](#)
- [config web-proxy explicit on page 1867](#)
- [config web-proxy forward-server-group on page 1872](#)
- [config web-proxy forward-server on page 1873](#)
- [config web-proxy global on page 1875](#)
- [config web-proxy profile on page 1878](#)
- [config web-proxy url-match on page 1882](#)
- [config web-proxy wisp on page 1883](#)

## config web-proxy debug-url

Configure debug URL addresses.

```
config web-proxy debug-url
  Description: Configure debug URL addresses.
  edit <name>
    set exact [enable|disable]
    set status [enable|disable]
    set url-pattern {string}
  next
end
```

## config web-proxy debug-url

Parameter	Description	Type	Size	Default
exact	Enable/disable matching the exact path.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable matching the exact path.		
	<i>disable</i>	Disable matching the exact path.		
name	Debug URL name.	string	Maximum length: 63	
status	Enable/disable this URL exemption.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable this URL exemption.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable this URL exemption.		
url-pattern	URL exemption pattern.		string	Maximum length: 511

## config web-proxy explicit

Configure explicit Web proxy settings.

```
config web-proxy explicit
    Description: Configure explicit Web proxy settings.
    set ftp-incoming-port {user}
    set ftp-over-http [enable|disable]
    set http-connection-mode [static|multiplex|...]
    set http-incoming-port {user}
    set https-incoming-port {user}
    set https-replacement-message [enable|disable]
    set incoming-ip {ipv4-address-any}
    set incoming-ip6 {ipv6-address}
    set ipv6-status [enable|disable]
    set message-upon-server-error [enable|disable]
    set outgoing-ip {ipv4-address-any}
    set outgoing-ip6 {ipv6-address}
    set pac-file-data {user}
    set pac-file-name {string}
    set pac-file-server-port {user}
    set pac-file-server-status [enable|disable]
    set pac-file-through-https [enable|disable]
    set pac-file-url {user}
    config pac-policy
        Description: PAC policies.
        edit <policyid>
            set status [enable|disable]
            set srcaddr <name1>, <name2>, ...
            set srcaddr6 <name1>, <name2>, ...
            set dstaddr <name1>, <name2>, ...
            set pac-file-name {string}
            set pac-file-data {user}
            set comments {var-string}
        next
    end
    set pref-dns-result [ipv4|ipv6]
    set realm {string}
    set sec-default-action [accept|deny]
    set socks [enable|disable]
    set socks-incoming-port {user}
    set ssl-algorithm [high|medium|...]
    set status [enable|disable]
    set strict-guest [enable|disable]
    set trace-auth-no-rsp [enable|disable]
```

```

set unknown-http-version [reject|best-effort]
end

```

## config web-proxy explicit

Parameter	Description	Type	Size	Default								
ftp-incoming-port	Accept incoming FTP-over-HTTP requests on one or more ports.	user	Not Specified									
ftp-over-http	Enable to proxy FTP-over-HTTP sessions sent from a web browser.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FTP-over-HTTP sessions.</td></tr><tr><td><i>disable</i></td><td>Disable FTP-over-HTTP sessions.</td></tr></table>	Option	Description	<i>enable</i>	Enable FTP-over-HTTP sessions.	<i>disable</i>	Disable FTP-over-HTTP sessions.					
Option	Description											
<i>enable</i>	Enable FTP-over-HTTP sessions.											
<i>disable</i>	Disable FTP-over-HTTP sessions.											
http-connection-mode	HTTP connection mode.	option	-	static								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Only one server connection exists during the proxy session.</td></tr><tr><td><i>multiplex</i></td><td>Established connections are held until the proxy session ends.</td></tr><tr><td><i>serverpool</i></td><td>Established connections are shared with other proxy sessions.</td></tr></table>	Option	Description	<i>static</i>	Only one server connection exists during the proxy session.	<i>multiplex</i>	Established connections are held until the proxy session ends.	<i>serverpool</i>	Established connections are shared with other proxy sessions.			
Option	Description											
<i>static</i>	Only one server connection exists during the proxy session.											
<i>multiplex</i>	Established connections are held until the proxy session ends.											
<i>serverpool</i>	Established connections are shared with other proxy sessions.											
http-incoming-port	Accept incoming HTTP requests on one or more ports.	user	Not Specified									
https-incoming-port	Accept incoming HTTPS requests on one or more ports.	user	Not Specified									
https-replacement-message	Enable/disable sending the client a replacement message for HTTPS requests.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display a replacement message for HTTPS requests.</td></tr><tr><td><i>disable</i></td><td>Do not display a replacement message for HTTPS requests.</td></tr></table>	Option	Description	<i>enable</i>	Display a replacement message for HTTPS requests.	<i>disable</i>	Do not display a replacement message for HTTPS requests.					
Option	Description											
<i>enable</i>	Display a replacement message for HTTPS requests.											
<i>disable</i>	Do not display a replacement message for HTTPS requests.											
incoming-ip	Restrict the explicit HTTP proxy to only accept sessions from this IP address. An interface must have this IP address.	ipv4-address-any	Not Specified	0.0.0.0								
incoming-ip6	Restrict the explicit web proxy to only accept sessions from this IPv6 address. An interface must have this IPv6 address.	ipv6-address	Not Specified	::								

Parameter	Description	Type	Size	Default						
ipv6-status	Enable/disable allowing an IPv6 web proxy destination in policies and all IPv6 related entries in this command.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allowing an IPv6 web proxy destination.</td></tr><tr><td><i>disable</i></td><td>Disable allowing an IPv6 web proxy destination.</td></tr></table>	Option	Description	<i>enable</i>	Enable allowing an IPv6 web proxy destination.	<i>disable</i>	Disable allowing an IPv6 web proxy destination.			
Option	Description									
<i>enable</i>	Enable allowing an IPv6 web proxy destination.									
<i>disable</i>	Disable allowing an IPv6 web proxy destination.									
message-upon-server-error	Enable/disable displaying a replacement message when a server error is detected.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display a replacement message when a server error is detected.</td></tr><tr><td><i>disable</i></td><td>Do not display a replacement message when a server error is detected.</td></tr></table>	Option	Description	<i>enable</i>	Display a replacement message when a server error is detected.	<i>disable</i>	Do not display a replacement message when a server error is detected.			
Option	Description									
<i>enable</i>	Display a replacement message when a server error is detected.									
<i>disable</i>	Do not display a replacement message when a server error is detected.									
outgoing-ip	Outgoing HTTP requests will have this IP address as their source address. An interface must have this IP address.	ipv4-address-any	Not Specified							
outgoing-ip6	Outgoing HTTP requests will leave this IPv6. Multiple interfaces can be specified. Interfaces must have these IPv6 addresses.	ipv6-address	Not Specified							
pac-file-data	PAC file contents enclosed in quotes (maximum of 256K bytes).	user	Not Specified							
pac-file-name	Pac file name.	string	Maximum length: 63	proxy.pac						
pac-file-server-port	Port number that PAC traffic from client web browsers uses to connect to the explicit web proxy.	user	Not Specified							
pac-file-server-status	Enable/disable Proxy Auto-Configuration (PAC) for users of this explicit proxy profile.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Proxy Auto-Configuration (PAC).</td></tr><tr><td><i>disable</i></td><td>Disable Proxy Auto-Configuration (PAC).</td></tr></table>	Option	Description	<i>enable</i>	Enable Proxy Auto-Configuration (PAC).	<i>disable</i>	Disable Proxy Auto-Configuration (PAC).			
Option	Description									
<i>enable</i>	Enable Proxy Auto-Configuration (PAC).									
<i>disable</i>	Disable Proxy Auto-Configuration (PAC).									
pac-file-through-https	Enable/disable to get Proxy Auto-Configuration (PAC) through HTTPS.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable to get Proxy Auto-Configuration (PAC) through HTTPS.</td></tr><tr><td><i>disable</i></td><td>Disable to get Proxy Auto-Configuration (PAC) through HTTPS.</td></tr></table>	Option	Description	<i>enable</i>	Enable to get Proxy Auto-Configuration (PAC) through HTTPS.	<i>disable</i>	Disable to get Proxy Auto-Configuration (PAC) through HTTPS.			
Option	Description									
<i>enable</i>	Enable to get Proxy Auto-Configuration (PAC) through HTTPS.									
<i>disable</i>	Disable to get Proxy Auto-Configuration (PAC) through HTTPS.									

Parameter	Description	Type	Size	Default								
pac-file-url	PAC file access URL.	user	Not Specified									
pref-dns-result	Prefer resolving addresses using the configured IPv4 or IPv6 DNS server.	option	-	ipv4								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>Prefer the IPv4 DNS server.</td></tr><tr><td>ipv6</td><td>Prefer the IPv6 DNS server.</td></tr></table>				Option	Description	ipv4	Prefer the IPv4 DNS server.	ipv6	Prefer the IPv6 DNS server.		
	Option	Description										
	ipv4	Prefer the IPv4 DNS server.										
ipv6	Prefer the IPv6 DNS server.											
realm	Authentication realm used to identify the explicit web proxy (maximum of 63 characters).	string	Maximum length: 63	default								
sec-default-action	Accept or deny explicit web proxy sessions when no web proxy firewall policy exists.	option	-	deny								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>accept</td><td>Accept requests. All explicit web proxy traffic is accepted whether there is an explicit web proxy policy or not.</td></tr><tr><td>deny</td><td>Deny requests unless there is a matching explicit web proxy policy.</td></tr></table>				Option	Description	accept	Accept requests. All explicit web proxy traffic is accepted whether there is an explicit web proxy policy or not.	deny	Deny requests unless there is a matching explicit web proxy policy.		
	Option	Description										
	accept	Accept requests. All explicit web proxy traffic is accepted whether there is an explicit web proxy policy or not.										
deny	Deny requests unless there is a matching explicit web proxy policy.											
socks	Enable/disable the SOCKS proxy.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable the SOCKS proxy.</td></tr><tr><td>disable</td><td>Disable the SOCKS proxy.</td></tr></table>				Option	Description	enable	Enable the SOCKS proxy.	disable	Disable the SOCKS proxy.		
	Option	Description										
	enable	Enable the SOCKS proxy.										
disable	Disable the SOCKS proxy.											
socks-incoming-port	Accept incoming SOCKS proxy requests on one or more ports.	user	Not Specified									
ssl-algorithm	Relative strength of encryption algorithms accepted in HTTPS deep scan: high, medium, or low.	option	-	low								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>high</td><td>High encryption. Allow only AES and ChaCha.</td></tr><tr><td>medium</td><td>Medium encryption. Allow AES, ChaCha, 3DES, and RC4.</td></tr><tr><td>low</td><td>Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.</td></tr></table>				Option	Description	high	High encryption. Allow only AES and ChaCha.	medium	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.	low	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.
	Option	Description										
	high	High encryption. Allow only AES and ChaCha.										
	medium	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.										
low	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.											
status	Enable/disable the explicit Web proxy for HTTP and HTTPS session.	option	-	disable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable the explicit web proxy.		
	<i>disable</i>	Disable the explicit web proxy.		
strict-guest	Enable/disable strict guest user checking by the explicit web proxy.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable strict guest user checking.		
	<i>disable</i>	Disable strict guest user checking.		
trace-auth-no-rsp	Enable/disable logging timed-out authentication requests.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable logging timed-out authentication requests.		
	<i>disable</i>	Disable logging timed-out authentication requests.		
unknown-http-version	How to handle HTTP sessions that do not comply with HTTP 0.9, 1.0, or 1.1.	option	-	reject
	<b>Option</b>	<b>Description</b>		
	<i>reject</i>	Reject or tear down HTTP sessions that do not use HTTP 0.9, 1.0, or 1.1.		
	<i>best-effort</i>	Assume all HTTP sessions comply with HTTP 0.9, 1.0, or 1.1. If a session uses a different HTTP version, it may not parse correctly and the connection may be lost.		

### config pac-policy

Parameter	Description	Type	Size	Default
policyid	Policy ID.	integer	Minimum value: 1 Maximum value: 100	0
status	Enable/disable policy.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable policy.		
	<i>disable</i>	Disable policy.		

Parameter	Description	Type	Size	Default
srcaddr <name>	Source address objects. Address name.	string	Maximum length: 79	
srcaddr6 <name>	Source address6 objects. Address name.	string	Maximum length: 79	
dstaddr <name>	Destination address objects. Address name.	string	Maximum length: 79	
pac-file-name	Pac file name.	string	Maximum length: 63	proxy.pac
pac-file-data	PAC file contents enclosed in quotes (maximum of 256K bytes).	user	Not Specified	
comments	Optional comments.	var-string	Maximum length: 1023	

## config web-proxy forward-server-group

Configure a forward server group consisting or multiple forward servers. Supports failover and load balancing.

```
config web-proxy forward-server-group
    Description: Configure a forward server group consisting or multiple forward servers.
    Supports failover and load balancing.
    edit <name>
        set affinity [enable|disable]
        set group-down-option [block|pass]
        set ldb-method [weighted|least-session|...]
        config server-list
            Description: Add web forward servers to a list to form a server group.
            Optionally assign weights to each server.
            edit <name>
                set weight {integer}
            next
        end
    next
end
```

## config web-proxy forward-server-group

Parameter	Description	Type	Size	Default
affinity	Enable/disable affinity, attaching a source-ip's traffic to the assigned forwarding server until the forward-server-affinity-timeout is reached (under web-proxy global).	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable affinity.		
	<i>disable</i>	Disable affinity.		
group-down-option	Action to take when all of the servers in the forward server group are down: block sessions until at least one server is back up or pass sessions to their destination.	option	-	block
	<b>Option</b>	<b>Description</b>		
	<i>block</i>	Block sessions until at least one server in the group is back up.		
	<i>pass</i>	Pass sessions to their destination bypassing servers in the forward server group.		
ldb-method	Load balance method: weighted or least-session.	option	-	weighted
	<b>Option</b>	<b>Description</b>		
	<i>weighted</i>	Load balance traffic to forward servers based on assigned weights. Weights are ratios of total number of sessions.		
	<i>least-session</i>	Send new sessions to the server with lowest session count.		
	<i>active-passive</i>	Send new sessions to the next active server in the list. Servers are selected with highest weight first and then in order as they are configured. Traffic switches back to the first server upon failure recovery.		
name	Configure a forward server group consisting one or multiple forward servers. Supports failover and load balancing.	string	Maximum length: 63	

### config server-list

Parameter	Description	Type	Size	Default
name	Forward server name.	string	Maximum length: 63	
weight	Optionally assign a weight of the forwarding server for weighted load balancing.	integer	Minimum value: 1 Maximum value: 100	10

### config web-proxy forward-server

Configure forward-server addresses.

```

config web-proxy forward-server
    Description: Configure forward-server addresses.
    edit <name>
        set addr-type [ip|fqdn]
        set comment {string}
        set fqdn {string}
        set healthcheck [disable|enable]
        set ip {ipv4-address-any}
        set monitor {string}
        set password {password}
        set port {integer}
        set server-down-option [block|pass]
        set username {string}
    next
end

```

## config web-proxy forward-server

Parameter	Description	Type	Size	Default
addr-type	Address type of the forwarding proxy server: IP or FQDN.	option	-	ip
	<div><div>Option</div><div>Description</div></div>			
	<i>ip</i>	Use an IP address for the forwarding proxy server.		
	<i>fqdn</i>	Use the FQDN for the forwarding proxy server.		
comment	Comment.	string	Maximum length: 63	
fqdn	Forward server Fully Qualified Domain Name (FQDN).	string	Maximum length: 255	
healthcheck	Enable/disable forward server health checking. Attempts to connect through the remote forwarding server to a destination to verify that the forwarding server is operating normally.	option	-	disable
	<div><div>Option</div><div>Description</div></div>			
	<i>disable</i>	Disable health checking.		
	<i>enable</i>	Enable health checking.		
ip	Forward proxy server IP address.	ipv4-address-any	Not Specified	0.0.0.0
monitor	URL for forward server health check monitoring.	string	Maximum length: 255	http://www.google.com

Parameter	Description	Type	Size	Default
name	Server name.	string	Maximum length: 63	
password	HTTP authentication password.	password	Not Specified	
port	Port number that the forwarding server expects to receive HTTP sessions on.	integer	Minimum value: 1 Maximum value: 65535	3128
server-down-option	Action to take when the forward server is found to be down: block sessions until the server is back up or pass sessions to their destination.	option	-	block
	Option	Description		
	block	Block sessions until the server is back up.		
	pass	Pass sessions to their destination bypassing the forward server.		
username	HTTP authentication user name.	string	Maximum length: 64	

## config web-proxy global

Configure Web proxy global settings.

```

config web-proxy global
    Description: Configure Web proxy global settings.
    set fast-policy-match [enable|disable]
    set forward-proxy-auth [enable|disable]
    set forward-server-affinity-timeout {integer}
    set ldap-user-cache [enable|disable]
    set learn-client-ip [enable|disable]
    set learn-client-ip-from-header {option1}, {option2}, ...
    set learn-client-ip-srcaddr <name1>, <name2>, ...
    set learn-client-ip-srcaddr6 <name1>, <name2>, ...
    set max-message-length {integer}
    set max-request-length {integer}
    set max-waf-body-cache-length {integer}
    set proxy-fqdn {string}
    set src-affinity-exempt-addr {ipv4-address-any}
    set src-affinity-exempt-addr6 {ipv6-address}
    set ssl-ca-cert {string}
    set ssl-cert {string}
    set strict-web-check [enable|disable]
    set webproxy-profile {string}
end

```

## config web-proxy global

Parameter	Description	Type	Size	Default								
fast-policy-match	Enable/disable fast matching algorithm for explicit and transparent proxy policy.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
forward-proxy-auth	Enable/disable forwarding proxy authentication headers.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable forwarding proxy authentication headers.</td></tr><tr><td><i>disable</i></td><td>Disable forwarding proxy authentication headers.</td></tr></table>	Option	Description	<i>enable</i>	Enable forwarding proxy authentication headers.	<i>disable</i>	Disable forwarding proxy authentication headers.					
Option	Description											
<i>enable</i>	Enable forwarding proxy authentication headers.											
<i>disable</i>	Disable forwarding proxy authentication headers.											
forward-server-affinity-timeout	Period of time before the source IP's traffic is no longer assigned to the forwarding server.	integer	Minimum value: 6 Maximum value: 60	30								
ldap-user-cache	Enable/disable LDAP user cache for explicit and transparent proxy user.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
learn-client-ip	Enable/disable learning the client's IP address from headers.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable learning the client's IP address from headers.</td></tr><tr><td><i>disable</i></td><td>Disable learning the client's IP address from headers.</td></tr></table>	Option	Description	<i>enable</i>	Enable learning the client's IP address from headers.	<i>disable</i>	Disable learning the client's IP address from headers.					
Option	Description											
<i>enable</i>	Enable learning the client's IP address from headers.											
<i>disable</i>	Disable learning the client's IP address from headers.											
learn-client-ip-from-header	Learn client IP address from the specified headers.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>true-client-ip</i></td><td>Learn the client IP address from the True-Client-IP header.</td></tr><tr><td><i>x-real-ip</i></td><td>Learn the client IP address from the X-Real-IP header.</td></tr><tr><td><i>x-forwarded-for</i></td><td>Learn the client IP address from the X-Forwarded-For header.</td></tr></table>	Option	Description	<i>true-client-ip</i>	Learn the client IP address from the True-Client-IP header.	<i>x-real-ip</i>	Learn the client IP address from the X-Real-IP header.	<i>x-forwarded-for</i>	Learn the client IP address from the X-Forwarded-For header.			
Option	Description											
<i>true-client-ip</i>	Learn the client IP address from the True-Client-IP header.											
<i>x-real-ip</i>	Learn the client IP address from the X-Real-IP header.											
<i>x-forwarded-for</i>	Learn the client IP address from the X-Forwarded-For header.											

Parameter	Description	Type	Size	Default						
learn-client-ip-srcaddr <name>	Source address name (srcaddr or srcaddr6 must be set). Address name.	string	Maximum length: 79							
learn-client-ip-srcaddr6 <name>	IPv6 Source address name (srcaddr or srcaddr6 must be set). Address name.	string	Maximum length: 79							
max-message-length	Maximum length of HTTP message, not including body.	integer	Minimum value: 16 Maximum value: 256	32						
max-request-length	Maximum length of HTTP request line.	integer	Minimum value: 2 Maximum value: 64	8						
max-waf-body-cache-length	Maximum length of HTTP messages processed by Web Application Firewall.	integer	Minimum value: 10 Maximum value: 1024	32						
proxy-fqdn	Fully Qualified Domain Name to connect to the explicit web proxy.	string	Maximum length: 255	default.fqdn						
src-affinity-exempt-addr	IPv4 source addresses to exempt proxy affinity.	ipv4-address-any	Not Specified							
src-affinity-exempt-addr6	IPv6 source addresses to exempt proxy affinity.	ipv6-address	Not Specified							
ssl-ca-cert	SSL CA certificate for SSL interception.	string	Maximum length: 35	Fortinet_CA_SSL						
ssl-cert	SSL certificate for SSL interception.	string	Maximum length: 35	Fortinet_Factory						
strict-web-check	Enable/disable strict web checking to block web sites that send incorrect headers that don't conform to HTTP 1.1.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable strict web checking.</td></tr><tr><td><i>disable</i></td><td>Disable strict web checking.</td></tr></table>				Option	Description	<i>enable</i>	Enable strict web checking.	<i>disable</i>	Disable strict web checking.
Option	Description									
<i>enable</i>	Enable strict web checking.									
<i>disable</i>	Disable strict web checking.									
webproxy-profile	Name of the web proxy profile to apply when explicit proxy traffic is allowed by default and traffic is accepted that does not match an explicit proxy policy.	string	Maximum length: 63							

## config web-proxy profile

Configure web proxy profiles.

```
config web-proxy profile
  Description: Configure web proxy profiles.
  edit <name>
    set header-client-ip [pass|add|...]
    set header-front-end-https [pass|add|...]
    set header-via-request [pass|add|...]
    set header-via-response [pass|add|...]
    set header-x-authenticated-groups [pass|add|...]
    set header-x-authenticated-user [pass|add|...]
    set header-x-forwarded-client-cert [pass|add|...]
    set header-x-forwarded-for [pass|add|...]
    config headers
      Description: Configure HTTP forwarded requests headers.
      edit <id>
        set name {string}
        set dstaddr <name1>, <name2>, ...
        set dstaddr6 <name1>, <name2>, ...
        set action [add-to-request|add-to-response|...]
        set content {string}
        set base64-encoding [disable|enable]
        set add-option [append|new-on-not-found|...]
        set protocol {option1}, {option2}, ...
      next
    end
    set log-header-change [enable|disable]
    set strip-encoding [enable|disable]
  next
end
```

## config web-proxy profile

Parameter	Description	Type	Size	Default								
header-client-ip	Action to take on the HTTP client-IP header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
Option	Description											
<i>pass</i>	Forward the same HTTP header.											
<i>add</i>	Add the HTTP header.											
<i>remove</i>	Remove the HTTP header.											
header-front-end-https	Action to take on the HTTP front-end-HTTPS header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-via-request	Action to take on the HTTP via header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-via-response	Action to take on the HTTP via header in forwarded responses: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-x-authenticated-groups	Action to take on the HTTP x-authenticated-groups header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-x-authenticated-user	Action to take on the HTTP x-authenticated-user header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	<b>Option</b>	<b>Description</b>		
	<i>pass</i>	Forward the same HTTP header.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.					
	Option	Description										
	<i>add</i>	Add the HTTP header.										
<i>remove</i>	Remove the HTTP header.											
header-x-forwarded-client-cert	Action to take on the HTTP x-forwarded-client-cert header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
	Option	Description										
	<i>pass</i>	Forward the same HTTP header.										
	<i>add</i>	Add the HTTP header.										
<i>remove</i>	Remove the HTTP header.											
header-x-forwarded-for	Action to take on the HTTP x-forwarded-for header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
	Option	Description										
	<i>pass</i>	Forward the same HTTP header.										
	<i>add</i>	Add the HTTP header.										
<i>remove</i>	Remove the HTTP header.											
log-header-change	Enable/disable logging HTTP header changes.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Enable/disable logging HTTP header changes.</td></tr><tr><td><i>disable</i></td><td>Disable Enable/disable logging HTTP header changes.</td></tr></table>	Option	Description	<i>enable</i>	Enable Enable/disable logging HTTP header changes.	<i>disable</i>	Disable Enable/disable logging HTTP header changes.					
	Option	Description										
	<i>enable</i>	Enable Enable/disable logging HTTP header changes.										
<i>disable</i>	Disable Enable/disable logging HTTP header changes.											
name	Profile name.	string	Maximum length: 63									
strip-encoding	Enable/disable stripping unsupported encoding from the request header.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable stripping of unsupported encoding from the request header.</td></tr><tr><td><i>disable</i></td><td>Disable stripping of unsupported encoding from the request header.</td></tr></table>	Option	Description	<i>enable</i>	Enable stripping of unsupported encoding from the request header.	<i>disable</i>	Disable stripping of unsupported encoding from the request header.					
	Option	Description										
	<i>enable</i>	Enable stripping of unsupported encoding from the request header.										
<i>disable</i>	Disable stripping of unsupported encoding from the request header.											

## config headers

Parameter	Description	Type	Size	Default										
id	HTTP forwarded header id.	integer	Minimum value: 0 Maximum value: 4294967295	0										
name	HTTP forwarded header name.	string	Maximum length: 79											
dstaddr <name>	Destination address and address group names. Address name.	string	Maximum length: 79											
dstaddr6 <name>	Destination address and address group names (IPv6). Address name.	string	Maximum length: 79											
action	Action when the HTTP header is forwarded.	option	-	add-to-request										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>add-to-request</i></td><td>Add the HTTP header to request.</td></tr><tr><td><i>add-to-response</i></td><td>Add the HTTP header to response.</td></tr><tr><td><i>remove-from-request</i></td><td>Remove the HTTP header from request.</td></tr><tr><td><i>remove-from-response</i></td><td>Remove the HTTP header from response.</td></tr></table>				Option	Description	<i>add-to-request</i>	Add the HTTP header to request.	<i>add-to-response</i>	Add the HTTP header to response.	<i>remove-from-request</i>	Remove the HTTP header from request.	<i>remove-from-response</i>	Remove the HTTP header from response.
Option	Description													
<i>add-to-request</i>	Add the HTTP header to request.													
<i>add-to-response</i>	Add the HTTP header to response.													
<i>remove-from-request</i>	Remove the HTTP header from request.													
<i>remove-from-response</i>	Remove the HTTP header from response.													
content	HTTP header content.	string	Maximum length: 1023											
base64-encoding	Enable/disable use of base64 encoding of HTTP content.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of base64 encoding of HTTP content.</td></tr><tr><td><i>enable</i></td><td>Enable use of base64 encoding of HTTP content.</td></tr></table>				Option	Description	<i>disable</i>	Disable use of base64 encoding of HTTP content.	<i>enable</i>	Enable use of base64 encoding of HTTP content.				
Option	Description													
<i>disable</i>	Disable use of base64 encoding of HTTP content.													
<i>enable</i>	Enable use of base64 encoding of HTTP content.													
add-option	Configure options to append content to existing HTTP header or add new HTTP header.	option	-	new										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>append</i></td><td>Append content to existing HTTP header or create new header if HTTP header is not found.</td></tr></table>				Option	Description	<i>append</i>	Append content to existing HTTP header or create new header if HTTP header is not found.						
Option	Description													
<i>append</i>	Append content to existing HTTP header or create new header if HTTP header is not found.													

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>new-on-not-found</i>	Create new header only if existing HTTP header is not found.		
	<i>new</i>	Create new header regardless if existing HTTP header is found or not.		
protocol	Configure protocol(s) to take add-option action on (HTTP, HTTPS, or both).	option	-	https http
	<b>Option</b>	<b>Description</b>		
	<i>https</i>	Perform add-option action on HTTPS.		
	<i>http</i>	Perform add-option action on HTTP.		

## config web-proxy url-match

Exempt URLs from web proxy forwarding and caching.

```

config web-proxy url-match
    Description: Exempt URLs from web proxy forwarding and caching.
    edit <name>
        set cache-exemption [enable|disable]
        set comment {var-string}
        set forward-server {string}
        set status [enable|disable]
        set url-pattern {string}
    next
end

```

## config web-proxy url-match

Parameter	Description	Type	Size	Default
cache-exemption	Enable/disable exempting this URL pattern from caching.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable exempting this URL pattern from caching.		
	<i>disable</i>	Disable exempting this URL pattern from caching.		
comment	Comment.	var-string	Maximum length: 255	
forward-server	Forward server name.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
name	Configure a name for the URL to be exempted.	string	Maximum length: 63							
status	Enable/disable exempting the URLs matching the URL pattern from web proxy forwarding and caching.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable exempting the matching URLs.</td></tr><tr><td><i>disable</i></td><td>Disable exempting the matching URLs.</td></tr></table>				Option	Description	<i>enable</i>	Enable exempting the matching URLs.	<i>disable</i>	Disable exempting the matching URLs.
	Option	Description								
	<i>enable</i>	Enable exempting the matching URLs.								
<i>disable</i>	Disable exempting the matching URLs.									
url-pattern	URL pattern to be exempted from web proxy forwarding and caching.	string	Maximum length: 511							

## config web-proxy wisp

Configure Websense Integrated Services Protocol (WISP) servers.

```
config web-proxy wisp
    Description: Configure Websense Integrated Services Protocol (WISP) servers.
    edit <name>
        set comment {var-string}
        set max-connections {integer}
        set outgoing-ip {ipv4-address-any}
        set server-ip {ipv4-address-any}
        set server-port {integer}
        set timeout {integer}
    next
end
```

## config web-proxy wisp

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
max-connections	Maximum number of web proxy WISP connections.	integer	Minimum value: 4 Maximum value: 4096	64
name	Server name.	string	Maximum length: 35	
outgoing-ip	WISP outgoing IP address.	ipv4-address-any	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
server-ip	WISP server IP address.	ipv4-address-any	Not Specified	0.0.0.0
server-port	WISP server port.	integer	Minimum value: 1 Maximum value: 65535	15868
timeout	Period of time before WISP requests time out.	integer	Minimum value: 1 Maximum value: 15	5

## webfilter

This section includes syntax for the following commands:

- [config webfilter content-header on page 1885](#)
- [config webfilter content on page 1886](#)
- [config webfilter fortiguard on page 1888](#)
- [config webfilter ftgd-local-cat on page 1890](#)
- [config webfilter ftgd-local-rating on page 1891](#)
- [config webfilter ips-urlfilter-cache-setting on page 1892](#)
- [config webfilter ips-urlfilter-setting on page 1892](#)
- [config webfilter ips-urlfilter-setting6 on page 1893](#)
- [config webfilter override on page 1894](#)
- [config webfilter profile on page 1895](#)
- [config webfilter search-engine on page 1912](#)
- [config webfilter urlfilter on page 1913](#)

### config webfilter content-header

Configure content types used by Web filter.

```
config webfilter content-header
  Description: Configure content types used by Web filter.
  edit <id>
    set comment {var-string}
    config entries
      Description: Configure content types used by web filter.
      edit <pattern>
        set action [block|allow|...]
        set category {user}
      next
    end
    set name {string}
  next
end
```

### config webfilter content-header

Parameter	Description	Type	Size	Default
comment	Optional comments.	var-string	Maximum length: 255	

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name of table.	string	Maximum length: 63	

### config entries

Parameter	Description	Type	Size	Default
pattern	Content type (regular expression).	string	Maximum length: 31	
action	Action to take for this content type.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>block</i>	Block content type.		
	<i>allow</i>	Allow content type.		
	<i>exempt</i>	Exempt content type.		
category	Categories that this content type applies to.	user	Not Specified	all

### config webfilter content

Configure Web filter banned word table.

```

config webfilter content
    Description: Configure Web filter banned word table.
    edit <id>
        set comment {var-string}
        config entries
            Description: Configure banned word entries.
            edit <name>
                set pattern-type [wildcard|regexp]
                set status [enable|disable]
                set lang [western|simch|...]
                set score {integer}
                set action [block|exempt]
            next
        end
        set name {string}
    next
end

```

## config webfilter content

Parameter	Description	Type	Size	Default
comment	Optional comments.	var-string	Maximum length: 255	
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name of table.	string	Maximum length: 63	

## config entries

Parameter	Description	Type	Size	Default
name	Banned word.	string	Maximum length: 127	
pattern-type	Banned word pattern type: wildcard pattern or Perl regular expression.	option	-	wildcard
	<b>Option</b>	<b>Description</b>		
	wildcard	Wildcard pattern.		
	regex	Perl regular expression.		
status	Enable/disable banned word.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	enable	Enable setting.		
	disable	Disable setting.		
lang	Language of banned word.	option	-	western
	<b>Option</b>	<b>Description</b>		
	western	Western.		
	simch	Simplified Chinese.		
	trach	Traditional Chinese.		
	japanese	Japanese.		
	korean	Korean.		

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>french</i></td><td>French.</td></tr><tr><td><i>thai</i></td><td>Thai.</td></tr><tr><td><i>spanish</i></td><td>Spanish.</td></tr><tr><td><i>cyrillic</i></td><td>Cyrillic.</td></tr></table>	Option	Description	<i>french</i>	French.	<i>thai</i>	Thai.	<i>spanish</i>	Spanish.	<i>cyrillic</i>	Cyrillic.			
	Option	Description												
	<i>french</i>	French.												
	<i>thai</i>	Thai.												
	<i>spanish</i>	Spanish.												
<i>cyrillic</i>	Cyrillic.													
score	Score, to be applied every time the word appears on a web page.	integer	Minimum value: 0 Maximum value: 4294967295	10										
action	Block or exempt word when a match is found.	option	-	block										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>block</i></td><td>Block matches.</td></tr><tr><td><i>exempt</i></td><td>Exempt matches.</td></tr></table>	Option	Description	<i>block</i>	Block matches.	<i>exempt</i>	Exempt matches.							
	Option	Description												
	<i>block</i>	Block matches.												
<i>exempt</i>	Exempt matches.													

## config webfilter fortiguard

Configure FortiGuard Web Filter service.

```
config webfilter fortiguard
    Description: Configure FortiGuard Web Filter service.
    set cache-mem-percent {integer}
    set cache-mode [ttl|db-ver]
    set cache-prefix-match [enable|disable]
    set close-ports [enable|disable]
    set embed-image [enable|disable]
    set ovrd-auth-https [enable|disable]
    set ovrd-auth-port-http {integer}
    set ovrd-auth-port-https {integer}
    set ovrd-auth-port-https-flow {integer}
    set ovrd-auth-port-warning {integer}
    set request-packet-size-limit {integer}
    set warn-auth-https [enable|disable]
end
```

## config webfilter fortiguard

Parameter	Description	Type	Size	Default						
cache-mem-percent	Maximum percentage of available memory allocated to caching.	integer	Minimum value: 1 Maximum value: 15	2 **						
cache-mode	Cache entry expiration mode.	option	-	tll						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tll</td><td>Expire cache items by time-to-live.</td></tr><tr><td>db-ver</td><td>Expire cache items when the server DB version changes.</td></tr></table>	Option	Description	tll	Expire cache items by time-to-live.	db-ver	Expire cache items when the server DB version changes.			
Option	Description									
tll	Expire cache items by time-to-live.									
db-ver	Expire cache items when the server DB version changes.									
cache-prefix-match	Enable/disable prefix matching in the cache.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
close-ports	Close ports used for HTTP/HTTPS override authentication and disable user overrides.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
embed-image	Enable/disable embedding images into replacement messages.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
ovrd-auth-https	Enable/disable use of HTTPS for override authentication.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									

Parameter	Description	Type	Size	Default
ovrd-auth-port-http	Port to use for FortiGuard Web Filter HTTP override authentication.	integer	Minimum value: 0 Maximum value: 65535	8008
ovrd-auth-port-https	Port to use for FortiGuard Web Filter HTTPS override authentication in proxy mode.	integer	Minimum value: 0 Maximum value: 65535	8010
ovrd-auth-port-https-flow	Port to use for FortiGuard Web Filter HTTPS override authentication in flow mode.	integer	Minimum value: 0 Maximum value: 65535	8015
ovrd-auth-port-warning	Port to use for FortiGuard Web Filter Warning override authentication.	integer	Minimum value: 0 Maximum value: 65535	8020
request-packet-size-limit	Limit size of URL request packets sent to FortiGuard server.	integer	Minimum value: 576 Maximum value: 10000	0
warn-auth-https	Enable/disable use of HTTPS for warning and authentication.	option	-	enable
		Option	Description	
		<i>enable</i>	Enable setting.	
		<i>disable</i>	Disable setting.	

\*\* Values may differ between models.

## config webfilter ftgd-local-cat

Configure FortiGuard Web Filter local categories.

```
config webfilter ftgd-local-cat
    Description: Configure FortiGuard Web Filter local categories.
    edit <desc>
        set id {integer}
        set status [enable|disable]
```

```
next
end
```

## config webfilter ftgd-local-cat

Parameter	Description	Type	Size	Default
desc	Local category description.	string	Maximum length: 79	
id	Local category ID.	integer	Minimum value: 140 Maximum value: 191	0
status	Enable/disable the local category.	option	-	enable
		Option	Description	
		enable	Enable the local category.	
		disable	Disable the local category.	

## config webfilter ftgd-local-rating

Configure local FortiGuard Web Filter local ratings.

```
config webfilter ftgd-local-rating
  Description: Configure local FortiGuard Web Filter local ratings.
  edit <url>
    set comment {var-string}
    set rating {user}
    set status [enable|disable]
  next
end
```

## config webfilter ftgd-local-rating

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
rating	Local rating.	user	Not Specified	
status	Enable/disable local rating.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable local rating.		
	<i>disable</i>	Disable local rating.		
url	URL to rate locally.	string	Maximum length: 511	

## config webfilter ips-urlfilter-cache-setting

Configure IPS URL filter cache settings.

```
config webfilter ips-urlfilter-cache-setting
    Description: Configure IPS URL filter cache settings.
    set dns-retry-interval {integer}
    set extended-ttl {integer}
end
```

## config webfilter ips-urlfilter-cache-setting

Parameter	Description	Type	Size	Default
dns-retry-interval	Retry interval. Refresh DNS faster than TTL to capture multiple IPs for hosts. 0 means use DNS server's TTL only.	integer	Minimum value: 0 Maximum value: 2147483	0
extended-ttl	Extend time to live beyond reported by DNS. Use of 0 means use DNS server's TTL.	integer	Minimum value: 0 Maximum value: 2147483	0

## config webfilter ips-urlfilter-setting

Configure IPS URL filter settings.

```
config webfilter ips-urlfilter-setting
    Description: Configure IPS URL filter settings.
    set device {string}
    set distance {integer}
    set gateway {ipv4-address}
    set geo-filter {var-string}
end
```

## config webfilter ips-urlfilter-setting

Parameter	Description	Type	Size	Default
device	Interface for this route.	string	Maximum length: 35	
distance	Administrative distance for this route.	integer	Minimum value: 1 Maximum value: 255	1
gateway	Gateway IP address for this route.	ipv4-address	Not Specified	0.0.0.0
geo-filter	Filter based on geographical location. Route will NOT be installed if the resolved IP address belongs to the country in the filter.	var-string	Maximum length: 255	

## config webfilter ips-urlfilter-setting6

Configure IPS URL filter settings for IPv6.

```
config webfilter ips-urlfilter-setting6
    Description: Configure IPS URL filter settings for IPv6.
    set device {string}
    set distance {integer}
    set gateway6 {ipv6-address}
    set geo-filter {var-string}
end
```

## config webfilter ips-urlfilter-setting6

Parameter	Description	Type	Size	Default
device	Interface for this route.	string	Maximum length: 35	
distance	Administrative distance for this route.	integer	Minimum value: 1 Maximum value: 255	1
gateway6	Gateway IPv6 address for this route.	ipv6-address	Not Specified	::
geo-filter	Filter based on geographical location. Route will NOT be installed if the resolved IPv6 address belongs to the country in the filter.	var-string	Maximum length: 255	

## config webfilter override

Configure FortiGuard Web Filter administrative overrides.

```
config webfilter override
    Description: Configure FortiGuard Web Filter administrative overrides.
    edit <id>
        set expires {user}
        set initiator {string}
        set ip {ipv4-address}
        set ip6 {ipv6-address}
        set new-profile {string}
        set old-profile {string}
        set scope [user|user-group|...]
        set status [enable|disable]
        set user {string}
        set user-group {string}
    next
end
```

## config webfilter override

Parameter	Description	Type	Size	Default
expires	Override expiration date and time, from 5 minutes to 365 from now (format: yyyy/mm/dd hh:mm:ss).	user	Not Specified	1969/12/31 16:00:00
id	Override rule ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
initiator	Initiating user of override (read-only setting).	string	Maximum length: 64	
ip	IPv4 address which the override applies.	ipv4-address	Not Specified	0.0.0.0
ip6	IPv6 address which the override applies.	ipv6-address	Not Specified	::
new-profile	Name of the new web filter profile used by the override.	string	Maximum length: 35	
old-profile	Name of the web filter profile which the override applies.	string	Maximum length: 35	
scope	Override either the specific user, user group, IPv4 address, or IPv6 address.	option	-	user

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>user</i>	Override the specified user.		
	<i>user-group</i>	Override the specified user group.		
	<i>ip</i>	Override the specified IP address.		
	<i>ip6</i>	Override the specified IPv6 address.		
status	Enable/disable override rule.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable override rule.		
	<i>disable</i>	Disable override rule.		
user	Name of the user which the override applies.	string	Maximum length: 64	
user-group	Specify the user group for which the override applies.	string	Maximum length: 63	

## config webfilter profile

Configure Web filter profiles.

```

config webfilter profile
    Description: Configure Web filter profiles.
    edit <name>
        config antiphish

	Option	Description										
	<i>enable</i>	Enable AntiPhishing functionality.										
<i>disable</i>	Disable AntiPhishing functionality.											
default-action	Action to be taken when there is no matching rule.	option	-	exempt								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>exempt</i></td><td>Exempt requests from matching.</td></tr><tr><td><i>log</i></td><td>Log all matched requests.</td></tr><tr><td><i>block</i></td><td>Block all matched requests.</td></tr></table>	Option	Description	<i>exempt</i>	Exempt requests from matching.	<i>log</i>	Log all matched requests.	<i>block</i>	Block all matched requests.			
	Option	Description										
	<i>exempt</i>	Exempt requests from matching.										
	<i>log</i>	Log all matched requests.										
<i>block</i>	Block all matched requests.											
check-uri	Enable/disable checking of GET URI parameters for known credentials.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable checking of GET URI for username and password fields.</td></tr><tr><td><i>disable</i></td><td>Disable checking of GET URI for username and password fields.</td></tr></table>	Option	Description	<i>enable</i>	Enable checking of GET URI for username and password fields.	<i>disable</i>	Disable checking of GET URI for username and password fields.					
	Option	Description										
	<i>enable</i>	Enable checking of GET URI for username and password fields.										
<i>disable</i>	Disable checking of GET URI for username and password fields.											
check-basic-auth	Enable/disable checking of HTTP Basic Auth field for known credentials.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable checking of HTTP Basic Auth field for known credentials.</td></tr><tr><td><i>disable</i></td><td>Disable checking of HTTP Basic Auth field for known credentials.</td></tr></table>	Option	Description	<i>enable</i>	Enable checking of HTTP Basic Auth field for known credentials.	<i>disable</i>	Disable checking of HTTP Basic Auth field for known credentials.					
	Option	Description										
	<i>enable</i>	Enable checking of HTTP Basic Auth field for known credentials.										
<i>disable</i>	Disable checking of HTTP Basic Auth field for known credentials.											
check-username-only	Enable/disable username only matching of credentials. Action will be taken for valid usernames regardless of password validity.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable username only credential matches.</td></tr><tr><td><i>disable</i></td><td>Disable username only credential matches.</td></tr></table>	Option	Description	<i>enable</i>	Enable username only credential matches.	<i>disable</i>	Disable username only credential matches.					
	Option	Description										
	<i>enable</i>	Enable username only credential matches.										
<i>disable</i>	Disable username only credential matches.											
max-body-len	Maximum size of a POST body to check for credentials.	integer	Minimum value: 0 Maximum value: 4294967295	65536								
authentication	Authentication methods.	option	-	domain-controller								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>domain-controller</i>	Domain Controller to verify user credential.		
	<i>ldap</i>	LDAP to verify user credential.		
domain-controller	Domain for which to verify received credentials against.	string	Maximum length: 63	
ldap	LDAP server for which to verify received credentials against.	string	Maximum length: 63	

### config inspection-entries

Parameter	Description	Type	Size	Default								
name	Inspection target name.	string	Maximum length: 63									
fortiguard-category	FortiGuard category to match.	user	Not Specified	0								
action	Action to be taken upon an AntiPhishing match.	option	-	exempt								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>exempt</i></td><td>Exempt requests from matching.</td></tr><tr><td><i>log</i></td><td>Log all matched requests.</td></tr><tr><td><i>block</i></td><td>Block all matched requests.</td></tr></table>				Option	Description	<i>exempt</i>	Exempt requests from matching.	<i>log</i>	Log all matched requests.	<i>block</i>	Block all matched requests.
Option	Description											
<i>exempt</i>	Exempt requests from matching.											
<i>log</i>	Log all matched requests.											
<i>block</i>	Block all matched requests.											

### config custom-patterns

Parameter	Description	Type	Size	Default
pattern	Target pattern.	string	Maximum length: 255	
category	Category that the pattern matches.	option	-	username
	Option	Description		
	username	Pattern matches username fields.		
	password	Pattern matches password fields.		
type	Pattern will be treated either as a regex pattern or literal string.	option	-	regex

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>regex</i>	Pattern will be treated as a regex pattern.		
	<i>literal</i>	Pattern will be treated as a literal string.		

## config ftgd-wf

Parameter	Description	Type	Size	Default
options	Options for FortiGuard Web Filter.	option	-	ftgd-disable
	<b>Option</b>	<b>Description</b>		
	<i>error-allow</i>	Allow web pages with a rating error to pass through.		
	<i>rate-server-ip</i>	Rate the server IP in addition to the domain name.		
	<i>connect-request-bypass</i>	Bypass connection which has CONNECT request.		
	<i>ftgd-disable</i>	Disable FortiGuard scanning.		
exempt-quota	Do not stop quota for these categories.	user	Not Specified	17
ovrd	Allow web filter profile overrides.	user	Not Specified	
max-quota-timeout	Maximum FortiGuard quota used by single page view in seconds (excludes streams).	integer	Minimum value: 1 Maximum value: 86400	300
rate-javascript-urls	Enable/disable rating JavaScript by URL.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable rating JavaScript by URL.		
	<i>enable</i>	Enable rating JavaScript by URL.		
rate-css-urls	Enable/disable rating CSS by URL.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable rating CSS by URL.		
	<i>enable</i>	Enable rating CSS by URL.		
rate-crl-urls	Enable/disable rating CRL by URL.	option	-	enable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable rating CRL by URL.		
	<i>enable</i>	Enable rating CRL by URL.		

### config filters

Parameter	Description	Type	Size	Default
id	ID number.	integer	Minimum value: 0 Maximum value: 255	0
category	Categories and groups the filter examines.	integer	Minimum value: 0 Maximum value: 255	0
action	Action to take for matches.	option	-	monitor
	<b>Option</b>	<b>Description</b>		
	<i>block</i>	Block access.		
	<i>authenticate</i>	Authenticate user before allowing access.		
	<i>monitor</i>	Allow access while logging the action.		
	<i>warning</i>	Allow access after warning the user.		
warn-duration	Duration of warnings.	user	Not Specified	5m
auth-usr-grp <name>	Groups with permission to authenticate. User group name.	string	Maximum length: 79	
log	Enable/disable logging.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
override-replacemsg	Override replacement message.	string	Maximum length: 28	
warning-prompt	Warning prompts in each category or each domain.	option	-	per-category

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>per-domain</i>	Per-domain warnings.		
	<i>per-category</i>	Per-category warnings.		
warning-duration-type	Re-display warning after closing browser or after a timeout.	option	-	timeout
	<b>Option</b>	<b>Description</b>		
	<i>session</i>	After session ends.		
	<i>timeout</i>	After timeout occurs.		

### config quota

Parameter	Description	Type	Size	Default
id	ID number.	integer	Minimum value: 0 Maximum value: 4294967295	0
category	FortiGuard categories to apply quota to (category action must be set to monitor).	user	Not Specified	
type	Quota type.	option	-	time
	<b>Option</b>	<b>Description</b>		
	<i>time</i>	Use a time-based quota.		
	<i>traffic</i>	Use a traffic-based quota.		
unit	Traffic quota unit of measurement.	option	-	MB
	<b>Option</b>	<b>Description</b>		
	<i>B</i>	Quota in bytes.		
	<i>KB</i>	Quota in kilobytes.		
	<i>MB</i>	Quota in megabytes.		
	<i>GB</i>	Quota in gigabytes.		

Parameter	Description	Type	Size	Default
value	Traffic quota value.	integer	Minimum value: 1 Maximum value: 4294967295	1024
duration	Duration of quota.	user	Not Specified	5m
override-replacemsg	Override replacement message.	string	Maximum length: 28	

## config override

Parameter	Description	Type	Size	Default												
ovrd-cookie	Allow/deny browser-based (cookie) overrides.	option	-	deny												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow browser-based (cookie) override.</td></tr><tr><td><i>deny</i></td><td>Deny browser-based (cookie) override.</td></tr></table>	Option	Description	<i>allow</i>	Allow browser-based (cookie) override.	<i>deny</i>	Deny browser-based (cookie) override.									
Option	Description															
<i>allow</i>	Allow browser-based (cookie) override.															
<i>deny</i>	Deny browser-based (cookie) override.															
ovrd-scope	Override scope.	option	-	user												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>user</i></td><td>Override for the user.</td></tr><tr><td><i>user-group</i></td><td>Override for the user's group.</td></tr><tr><td><i>ip</i></td><td>Override for the initiating IP.</td></tr><tr><td><i>browser</i></td><td>Create browser-based (cookie) override.</td></tr><tr><td><i>ask</i></td><td>Prompt for scope when initiating an override.</td></tr></table>	Option	Description	<i>user</i>	Override for the user.	<i>user-group</i>	Override for the user's group.	<i>ip</i>	Override for the initiating IP.	<i>browser</i>	Create browser-based (cookie) override.	<i>ask</i>	Prompt for scope when initiating an override.			
Option	Description															
<i>user</i>	Override for the user.															
<i>user-group</i>	Override for the user's group.															
<i>ip</i>	Override for the initiating IP.															
<i>browser</i>	Create browser-based (cookie) override.															
<i>ask</i>	Prompt for scope when initiating an override.															
profile-type	Override profile type.	option	-	list												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>list</i></td><td>Profile chosen from list.</td></tr><tr><td><i>radius</i></td><td>Profile determined by RADIUS server.</td></tr></table>	Option	Description	<i>list</i>	Profile chosen from list.	<i>radius</i>	Profile determined by RADIUS server.									
Option	Description															
<i>list</i>	Profile chosen from list.															
<i>radius</i>	Profile determined by RADIUS server.															
ovrd-dur-mode	Override duration mode.	option	-	constant												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>constant</i></td><td>Constant mode.</td></tr><tr><td><i>ask</i></td><td>Prompt for duration when initiating an override.</td></tr></table>	Option	Description	<i>constant</i>	Constant mode.	<i>ask</i>	Prompt for duration when initiating an override.									
Option	Description															
<i>constant</i>	Constant mode.															
<i>ask</i>	Prompt for duration when initiating an override.															

Parameter	Description	Type	Size	Default
ovrd-dur	Override duration.	user	Not Specified	15m
profile-attribute	Profile attribute to retrieve from the RADIUS server.	option	-	Login-LAT-Service
	Option	Description		
	<i>User-Name</i>	Use this attribute.		
	<i>NAS-IP-Address</i>	Use this attribute.		
	<i>Framed-IP-Address</i>	Use this attribute.		
	<i>Framed-IP-Netmask</i>	Use this attribute.		
	<i>Filter-Id</i>	Use this attribute.		
	<i>Login-IP-Host</i>	Use this attribute.		
	<i>Reply-Message</i>	Use this attribute.		
	<i>Callback-Number</i>	Use this attribute.		
	<i>Callback-Id</i>	Use this attribute.		
	<i>Framed-Route</i>	Use this attribute.		
	<i>Framed-IPX-Network</i>	Use this attribute.		
	<i>Class</i>	Use this attribute.		
	<i>Called-Station-Id</i>	Use this attribute.		
	<i>Calling-Station-Id</i>	Use this attribute.		
	<i>NAS-Identifier</i>	Use this attribute.		
	<i>Proxy-State</i>	Use this attribute.		
	<i>Login-LAT-Service</i>	Use this attribute.		
	<i>Login-LAT-Node</i>	Use this attribute.		
	<i>Login-LAT-Group</i>	Use this attribute.		
	<i>Framed-AppleTalk-Zone</i>	Use this attribute.		
	<i>Acct-Session-Id</i>	Use this attribute.		

Parameter	Description	Type	Size	Default				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>Acct-Multi-Session-Id</i></td><td>Use this attribute.</td></tr></table>				Option	Description	<i>Acct-Multi-Session-Id</i>	Use this attribute.
	Option	Description						
<i>Acct-Multi-Session-Id</i>	Use this attribute.							
ovrd-user-group <name>	User groups with permission to use the override. User group name.	string	Maximum length: 79					
profile <name>	Web filter profile with permission to create overrides. Web profile.	string	Maximum length: 79					

## config web

Parameter	Description	Type	Size	Default						
bword-threshold	Banned word score threshold.	integer	Minimum value: 0 Maximum value: 2147483647	10						
bword-table	Banned word table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
urlfilter-table	URL filter table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
content-header-list	Content header list.	integer	Minimum value: 0 Maximum value: 4294967295	0						
blocklist	Enable/disable automatic addition of URLs detected by FortiSandbox to blocklist.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
allowlist	FortiGuard allowlist settings.	option	-							

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>exempt-av</i></td><td>Exempt antivirus.</td></tr><tr><td><i>exempt-webcontent</i></td><td>Exempt web content.</td></tr><tr><td><i>exempt-activex-java-cookie</i></td><td>Exempt ActiveX-JAVA-Cookie.</td></tr><tr><td><i>exempt-dlp</i></td><td>Exempt DLP.</td></tr><tr><td><i>exempt-rangeblock</i></td><td>Exempt RangeBlock.</td></tr><tr><td><i>extended-log-others</i></td><td>Support extended log.</td></tr></table>	Option	Description	<i>exempt-av</i>	Exempt antivirus.	<i>exempt-webcontent</i>	Exempt web content.	<i>exempt-activex-java-cookie</i>	Exempt ActiveX-JAVA-Cookie.	<i>exempt-dlp</i>	Exempt DLP.	<i>exempt-rangeblock</i>	Exempt RangeBlock.	<i>extended-log-others</i>	Support extended log.			
	Option	Description																
	<i>exempt-av</i>	Exempt antivirus.																
	<i>exempt-webcontent</i>	Exempt web content.																
	<i>exempt-activex-java-cookie</i>	Exempt ActiveX-JAVA-Cookie.																
	<i>exempt-dlp</i>	Exempt DLP.																
	<i>exempt-rangeblock</i>	Exempt RangeBlock.																
<i>extended-log-others</i>	Support extended log.																	
safe-search	Safe search type.	option	-															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>url</i></td><td>Insert safe search string into URL.</td></tr><tr><td><i>header</i></td><td>Insert safe search header.</td></tr></table>	Option	Description	<i>url</i>	Insert safe search string into URL.	<i>header</i>	Insert safe search header.											
	Option	Description																
	<i>url</i>	Insert safe search string into URL.																
<i>header</i>	Insert safe search header.																	
youtube-restrict	YouTube EDU filter level.	option	-	none														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Full access for YouTube.</td></tr><tr><td><i>strict</i></td><td>Strict access for YouTube.</td></tr><tr><td><i>moderate</i></td><td>Moderate access for YouTube.</td></tr></table>	Option	Description	<i>none</i>	Full access for YouTube.	<i>strict</i>	Strict access for YouTube.	<i>moderate</i>	Moderate access for YouTube.									
	Option	Description																
	<i>none</i>	Full access for YouTube.																
	<i>strict</i>	Strict access for YouTube.																
<i>moderate</i>	Moderate access for YouTube.																	
vimeo-restrict	Set Vimeo-restrict ("7" = don't show mature content, "134" = don't show unrated and mature content). A value of cookie "content_rating".	string	Maximum length: 63															
log-search	Enable/disable logging all search phrases.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.											
	Option	Description																
	<i>enable</i>	Enable setting.																
<i>disable</i>	Disable setting.																	
keyword-match <pattern>	Search keywords to log when match is found. Pattern/keyword to search for.	string	Maximum length: 79	**														

## config webfilter search-engine

Configure web filter search engines.

```
config webfilter search-engine
  Description: Configure web filter search engines.
  edit <name>
    set charset [utf-8|gb2312]
    set hostname {string}
    set query {string}
    set safesearch [disable|url|...]
    set safesearch-str {string}
    set url {string}
  next
end
```

## config webfilter search-engine

Parameter	Description	Type	Size	Default
charset	Search engine charset.	option	-	utf-8
		Option	Description	
		utf-8	UTF-8 encoding.	
		gb2312	GB2312 encoding.	
hostname	Hostname (regular expression).	string	Maximum length: 127	
name	Search engine name.	string	Maximum length: 35	
query	Code used to prefix a query (must end with an equals character).	string	Maximum length: 15	
safesearch	Safe search method. You can disable safe search, add the safe search string to URLs, or insert a safe search header.	option	-	disable
		Option	Description	
		disable	Site does not support safe search.	
		url	Safe search selected with a parameter in the URL.	
		header	Safe search selected by search header (i.e. youtube.edu).	
		translate	Perform URL FortiGuard check on translated URL.	
		yt-pattern	Pattern to match YouTube channel ID.	
		yt-scan	Perform IPS scan.	

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>yt-video</i>	Pattern to match YouTube video name.		
	<i>yt-channel</i>	Pattern to match YouTube channel name.		
safesearch-str	Safe search parameter used in the URL in URL mode. In translate mode, it provides either the regex to translate the URL or the special case to translate the URL.	string	Maximum length: 255	
url	URL (regular expression).	string	Maximum length: 127	

## config webfilter urlfilter

Configure URL filter lists.

```
config webfilter urlfilter
  Description: Configure URL filter lists.
  edit <id>
    set comment {var-string}
    config entries
      Description: URL filter entries.
      edit <id>
        set url {string}
        set type [simple|regex|...]
        set action [exempt|block|...]
        set antiphish-action [block|log]
        set status [enable|disable]
        set exempt {option1}, {option2}, ...
        set web-proxy-profile {string}
        set referrer-host {string}
        set dns-address-family [ipv4|ipv6|...]
      next
    end
    set ip-addr-block [enable|disable]
    set ip4-mapped-ip6 [enable|disable]
    set name {string}
    set one-arm-ips-urlfilter [enable|disable]
  next
end
```

## config webfilter urlfilter

Parameter	Description	Type	Size	Default
comment	Optional comments.	var-string	Maximum length: 255	

Parameter	Description	Type	Size	Default						
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ip-addr-block	Enable/disable blocking URLs when the hostname appears as an IP address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable blocking URLs when the hostname appears as an IP address.</td></tr><tr><td><i>disable</i></td><td>Disable blocking URLs when the hostname appears as an IP address.</td></tr></table>				Option	Description	<i>enable</i>	Enable blocking URLs when the hostname appears as an IP address.	<i>disable</i>	Disable blocking URLs when the hostname appears as an IP address.
Option	Description									
<i>enable</i>	Enable blocking URLs when the hostname appears as an IP address.									
<i>disable</i>	Disable blocking URLs when the hostname appears as an IP address.									
ip4-mapped-ip6	Enable/disable matching of IPv4 mapped IPv6 URLs.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable matching IPv4 mapped IPv6 URLs.</td></tr><tr><td><i>disable</i></td><td>Disable matching IPv4 mapped IPv6 URLs.</td></tr></table>				Option	Description	<i>enable</i>	Enable matching IPv4 mapped IPv6 URLs.	<i>disable</i>	Disable matching IPv4 mapped IPv6 URLs.
Option	Description									
<i>enable</i>	Enable matching IPv4 mapped IPv6 URLs.									
<i>disable</i>	Disable matching IPv4 mapped IPv6 URLs.									
name	Name of URL filter list.	string	Maximum length: 63							
one-arm-ips-urlfilter	Enable/disable DNS resolver for one-arm IPS URL filter operation.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS resolver for one-arm IPS URL filter operation.</td></tr><tr><td><i>disable</i></td><td>Disable DNS resolver for one-arm IPS URL filter operation.</td></tr></table>				Option	Description	<i>enable</i>	Enable DNS resolver for one-arm IPS URL filter operation.	<i>disable</i>	Disable DNS resolver for one-arm IPS URL filter operation.
Option	Description									
<i>enable</i>	Enable DNS resolver for one-arm IPS URL filter operation.									
<i>disable</i>	Disable DNS resolver for one-arm IPS URL filter operation.									

## config entries

Parameter	Description	Type	Size	Default
id	Id.	integer	Minimum value: 0 Maximum value: 4294967295	0
url	URL to be filtered.	string	Maximum length: 511	
type	Filter type (simple, regex, or wildcard).	option	-	simple

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>simple</i>	Simple URL string.		
	<i>regex</i>	Regular expression URL string.		
	<i>wildcard</i>	Wildcard URL string.		
action	Action to take for URL filter matches.	option	-	exempt
	<b>Option</b>	<b>Description</b>		
	<i>exempt</i>	Exempt matches.		
	<i>block</i>	Block matches.		
	<i>allow</i>	Allow matches (no log).		
	<i>monitor</i>	Allow matches (with log).		
antiphish-action	Action to take for AntiPhishing matches.	option	-	block
	<b>Option</b>	<b>Description</b>		
	<i>block</i>	Block matches.		
	<i>log</i>	Allow matches with log.		
status	Enable/disable this URL filter.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable this URL filter.		
	<i>disable</i>	Disable this URL filter.		
exempt	If action is set to exempt, select the security profile operations that exempt URLs skip. Separate multiple options with a space.	option	-	av web-content activex- java-cookie dlp fortiguard range-block antiphish all
	<b>Option</b>	<b>Description</b>		
	<i>av</i>	AntiVirus scanning.		
	<i>web-content</i>	Web filter content matching.		

Parameter	Description	Type	Size	Default																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>activex-java-cookie</i></td><td>ActiveX, Java, and cookie filtering.</td></tr><tr><td><i>dlp</i></td><td>DLP scanning.</td></tr><tr><td><i>fortiguard</i></td><td>FortiGuard web filtering.</td></tr><tr><td><i>range-block</i></td><td>Range block feature.</td></tr><tr><td><i>pass</i></td><td>Pass single connection from all.</td></tr><tr><td><i>antiphish</i></td><td>AntiPhish credential checking.</td></tr><tr><td><i>all</i></td><td>Exempt from all security profiles.</td></tr></table>				Option	Description	<i>activex-java-cookie</i>	ActiveX, Java, and cookie filtering.	<i>dlp</i>	DLP scanning.	<i>fortiguard</i>	FortiGuard web filtering.	<i>range-block</i>	Range block feature.	<i>pass</i>	Pass single connection from all.	<i>antiphish</i>	AntiPhish credential checking.	<i>all</i>	Exempt from all security profiles.
	Option	Description																		
	<i>activex-java-cookie</i>	ActiveX, Java, and cookie filtering.																		
	<i>dlp</i>	DLP scanning.																		
	<i>fortiguard</i>	FortiGuard web filtering.																		
	<i>range-block</i>	Range block feature.																		
	<i>pass</i>	Pass single connection from all.																		
	<i>antiphish</i>	AntiPhish credential checking.																		
<i>all</i>	Exempt from all security profiles.																			
web-proxy-profile	Web proxy profile.	string	Maximum length: 63																	
referrer-host	Referrer host name.	string	Maximum length: 255																	
dns-address-family	Resolve IPv4 address, IPv6 address, or both from DNS server.	option	-	ipv4																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ipv4</i></td><td>Resolve IPv4 address from DNS server.</td></tr><tr><td><i>ipv6</i></td><td>Resolve IPv6 address from DNS server.</td></tr><tr><td><i>both</i></td><td>Resolve both IPv4 and IPv6 addresses from DNS server.</td></tr></table>				Option	Description	<i>ipv4</i>	Resolve IPv4 address from DNS server.	<i>ipv6</i>	Resolve IPv6 address from DNS server.	<i>both</i>	Resolve both IPv4 and IPv6 addresses from DNS server.								
	Option	Description																		
	<i>ipv4</i>	Resolve IPv4 address from DNS server.																		
	<i>ipv6</i>	Resolve IPv6 address from DNS server.																		
<i>both</i>	Resolve both IPv4 and IPv6 addresses from DNS server.

## config wireless-controller access-control-list

Configure WiFi bridge access control list.

```
config wireless-controller access-control-list
  Description: Configure WiFi bridge access control list.
  edit <name>
    set comment {string}
    config layer3-ipv4-rules
      Description: AP ACL layer3 ipv4 rule list.
      edit <rule-id>
        set comment {string}
        set srcaddr {user}
        set srcport {integer}
        set dstaddr {user}
        set dstport {integer}
        set protocol {integer}
        set action [allow|deny]
      next
    end
    config layer3-ipv6-rules
      Description: AP ACL layer3 ipv6 rule list.
      edit <rule-id>
        set comment {string}
        set srcaddr {user}
        set srcport {integer}
        set dstaddr {user}
        set dstport {integer}
        set protocol {integer}
        set action [allow|deny]
      next
    end
  next
end
```

## config wireless-controller access-control-list

Parameter	Description	Type	Size	Default
comment	Description.	string	Maximum length: 63	
name	AP access control list name.	string	Maximum length: 35	

### config layer3-ipv4-rules

Parameter	Description	Type	Size	Default
rule-id	Rule ID.	integer	Minimum value: 1 Maximum value: 65535	0
comment	Description.	string	Maximum length: 63	
srcaddr	Source IP address.	user	Not Specified	
srcport	Source port.	integer	Minimum value: 0 Maximum value: 65535	0
dstaddr	Destination IP address.	user	Not Specified	
dstport	Destination port.	integer	Minimum value: 0 Maximum value: 65535	0
protocol	Protocol type as defined by IANA.	integer	Minimum value: 0 Maximum value: 255	255
action	Policy action (allow   deny).	option	-	
	Option	Description		
	allow	Allows traffic matching the policy.		
	deny	Blocks traffic matching the policy.		

### config layer3-ipv6-rules

Parameter	Description	Type	Size	Default
rule-id	Rule ID.	integer	Minimum value: 1 Maximum value: 65535	0

Parameter	Description	Type	Size	Default
comment	Description.	string	Maximum length: 63	
srcaddr	Source IPv6 address (any   local-LAN   IPv6 address [/prefix length]), default = any.	user	Not Specified	
srcport	Source port.	integer	Minimum value: 0 Maximum value: 65535	0
dstaddr	Destination IPv6 address (any   local-LAN   IPv6 address[/prefix length]), default = any.	user	Not Specified	
dstport	Destination port.	integer	Minimum value: 0 Maximum value: 65535	0
protocol	Protocol type as defined by IANA.	integer	Minimum value: 0 Maximum value: 255	255
action	Policy action (allow   deny).	option	-	
	Option	Description		
	allow	Allows traffic matching the policy.		
	deny	Blocks traffic matching the policy.		

## config wireless-controller ap-status

Configure access point status (rogue | accepted | suppressed).

```

config wireless-controller ap-status
    Description: Configure access point status (rogue | accepted | suppressed).
    edit <id>
        set bssid {mac-address}
        set ssid {string}
        set status [rogue|accepted|...]
    next
end

```

## config wireless-controller ap-status

Parameter	Description	Type	Size	Default
bssid	Access Point's (AP's) BSSID.	mac-address	Not Specified	00:00:00:00:00:00
id	AP ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ssid	Access Point's (AP's) SSID.	string	Maximum length: 32	
status	Access Point's (AP's) status: rogue, accepted, or suppressed.	option	-	rogue
		Option	Description	
		<i>rogue</i>	Rogue AP.	
		<i>accepted</i>	Accepted AP.	
		<i>suppressed</i>	Suppressed AP.	

## config wireless-controller apcfg-profile

Configure AP local configuration profiles.

```
config wireless-controller apcfg-profile
  Description: Configure AP local configuration profiles.
  edit <name>
    set ac-ip {ipv4-address}
    set ac-port {integer}
    set ac-timer {integer}
    set ac-type [default|specify|...]
    set ap-family [fap|fap-u|...]
    config command-list
      Description: AP local configuration command list.
      edit <id>

## config wireless-controller apcfg-profile

Parameter	Description	Type	Size	Default								
ac-ip	IP address of the validation controller that AP must be able to join after applying AP local configuration.	ipv4-address	Not Specified	0.0.0.0								
ac-port	Port of the validation controller that AP must be able to join after applying AP local configuration.	integer	Minimum value: 1024 Maximum value: 49150	0								
ac-timer	Maximum waiting time for the AP to join the validation controller after applying AP local configuration.	integer	Minimum value: 3 Maximum value: 30	10								
ac-type	Validation controller type.	option	-	default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>This controller is the one and only controller that the AP could join after applying AP local configuration.</td></tr><tr><td><i>specify</i></td><td>Specified controller is the one and only controller that the AP could join after applying AP local configuration.</td></tr><tr><td><i>apcfg</i></td><td>Any controller defined by AP local configuration after applying AP local configuration.</td></tr></table>				Option	Description	<i>default</i>	This controller is the one and only controller that the AP could join after applying AP local configuration.	<i>specify</i>	Specified controller is the one and only controller that the AP could join after applying AP local configuration.	<i>apcfg</i>	Any controller defined by AP local configuration after applying AP local configuration.
Option	Description											
<i>default</i>	This controller is the one and only controller that the AP could join after applying AP local configuration.											
<i>specify</i>	Specified controller is the one and only controller that the AP could join after applying AP local configuration.											
<i>apcfg</i>	Any controller defined by AP local configuration after applying AP local configuration.											
ap-family	FortiAP family type.	option	-	fap								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fap</i></td><td>FortiAP Family.</td></tr><tr><td><i>fap-u</i></td><td>FortiAP-U Family.</td></tr><tr><td><i>fap-c</i></td><td>FortiAP-C Family.</td></tr></table>				Option	Description	<i>fap</i>	FortiAP Family.	<i>fap-u</i>	FortiAP-U Family.	<i>fap-c</i>	FortiAP-C Family.
Option	Description											
<i>fap</i>	FortiAP Family.											
<i>fap-u</i>	FortiAP-U Family.											
<i>fap-c</i>	FortiAP-C Family.											
comment	Comment.	var-string	Maximum length: 255									
name	AP local configuration profile name.	string	Maximum length: 35									

## config command-list

Parameter	Description	Type	Size	Default
id	Command ID.	integer	Minimum value: 1 Maximum value: 255	0
type	The command type.	option	-	non-password
		Option	Description	
		<i>non-password</i>	Non-password command.	
		<i>password</i>	Password command.	
name	AP local configuration command name.	string	Maximum length: 63	
value	AP local configuration command value.	string	Maximum length: 127	
passwd-value	AP local configuration command password value.	password	Not Specified	

## config wireless-controller arrp-profile

Configure WiFi Automatic Radio Resource Provisioning (ARRP) profiles.

```
config wireless-controller arrp-profile
  Description: Configure WiFi Automatic Radio Resource Provisioning (ARRP) profiles.
  edit <name>
    set comment {var-string}
    set darrp-optimize {integer}
    set darrp-optimize-schedules <name1>, <name2>, ...
    set include-dfs-channel [enable|disable]
    set include-weather-channel [enable|disable]
    set monitor-period {integer}
    set override-darrp-optimize [enable|disable]
    set selection-period {integer}
    set threshold-ap {integer}
    set threshold-channel-load {integer}
    set threshold-noise-floor {string}
    set threshold-rx-errors {integer}
    set threshold-spectral-rssi {string}
    set threshold-tx-retries {integer}
    set weight-channel-load {integer}
    set weight-dfs-channel {integer}
    set weight-managed-ap {integer}
    set weight-noise-floor {integer}
    set weight-rogue-ap {integer}
    set weight-spectral-rssi {integer}
    set weight-weather-channel {integer}
```

next  
end

## config wireless-controller arrp-profile

Parameter	Description	Type	Size	Default						
comment	Comment.	var-string	Maximum length: 255							
darrp-optimize	Time for running Dynamic Automatic Radio Resource Provisioning.	integer	Minimum value: 0 Maximum value: 86400	86400						
darrp-optimize-schedules <name>	Firewall schedules for DARRP running time. DARRP will run periodically based on darrp-optimize within the schedules. Separate multiple schedule names with a space. Schedule name.	string	Maximum length: 35							
include-dfs-channel	Enable/disable use of DFS channel in DARRP channel selection phase 1.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Include DFS channel in darrp channel selection phase 1.</td></tr><tr><td><i>disable</i></td><td>Exclude DFS channel in darrp channel selection phase 1.</td></tr></table>				Option	Description	<i>enable</i>	Include DFS channel in darrp channel selection phase 1.	<i>disable</i>	Exclude DFS channel in darrp channel selection phase 1.
Option	Description									
<i>enable</i>	Include DFS channel in darrp channel selection phase 1.									
<i>disable</i>	Exclude DFS channel in darrp channel selection phase 1.									
include-weather-channel	Enable/disable use of weather channel in DARRP channel selection phase 1.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Include weather channel in darrp channel selection phase 1.</td></tr><tr><td><i>disable</i></td><td>Exclude weather channel in darrp channel selection phase 1.</td></tr></table>				Option	Description	<i>enable</i>	Include weather channel in darrp channel selection phase 1.	<i>disable</i>	Exclude weather channel in darrp channel selection phase 1.
Option	Description									
<i>enable</i>	Include weather channel in darrp channel selection phase 1.									
<i>disable</i>	Exclude weather channel in darrp channel selection phase 1.									
monitor-period	Period in seconds to measure average transmit retries and receive errors.	integer	Minimum value: 0 Maximum value: 65535	300						
name	WiFi ARRP profile name.	string	Maximum length: 35							
override-darrp-optimize	Enable to override setting darrp-optimize and darrp-optimize-schedules.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Override setting darrp-optimize and darrp-optimize-schedules.</td></tr><tr><td><i>disable</i></td><td>Use setting darrp-optimize and darrp-optimize-schedules.</td></tr></table>	Option	Description	<i>enable</i>	Override setting darrp-optimize and darrp-optimize-schedules.	<i>disable</i>	Use setting darrp-optimize and darrp-optimize-schedules.			
	Option	Description								
	<i>enable</i>	Override setting darrp-optimize and darrp-optimize-schedules.								
<i>disable</i>	Use setting darrp-optimize and darrp-optimize-schedules.									
selection-period	Period in seconds to measure average channel load, noise floor, spectral RSSI.	integer	Minimum value: 0 Maximum value: 65535	3600						
threshold-ap	Threshold to reject channel in DARRP channel selection phase 1 due to surrounding APs.	integer	Minimum value: 0 Maximum value: 500	250						
threshold-channel-load	Threshold in percentage to reject channel in DARRP channel selection phase 1 due to channel load.	integer	Minimum value: 0 Maximum value: 100	60						
threshold-noise-floor	Threshold in dBm to reject channel in DARRP channel selection phase 1 due to noise floor.	string	Maximum length: 7	-85						
threshold-rx-errors	Threshold in percentage for receive errors to trigger channel reselection in DARRP monitor stage.	integer	Minimum value: 0 Maximum value: 100	50						
threshold-spectral-rssi	Threshold in dBm to reject channel in DARRP channel selection phase 1 due to spectral RSSI.	string	Maximum length: 7	-65						
threshold-tx-retries	Threshold in percentage for transmit retries to trigger channel reselection in DARRP monitor stage.	integer	Minimum value: 0 Maximum value: 1000	300						
weight-channel-load	Weight in DARRP channel score calculation for channel load.	integer	Minimum value: 0 Maximum value: 2000	20						
weight-dfs-channel	Weight in DARRP channel score calculation for DFS channel.	integer	Minimum value: 0 Maximum value: 2000	0						

Parameter	Description	Type	Size	Default
weight-managed-ap	Weight in DARRP channel score calculation for managed APs.	integer	Minimum value: 0 Maximum value: 2000	50
weight-noise-floor	Weight in DARRP channel score calculation for noise floor.	integer	Minimum value: 0 Maximum value: 2000	40
weight-rogue-ap	Weight in DARRP channel score calculation for rogue APs.	integer	Minimum value: 0 Maximum value: 2000	10
weight-spectral-rssi	Weight in DARRP channel score calculation for spectral RSSI.	integer	Minimum value: 0 Maximum value: 2000	40
weight-weather-channel	Weight in DARRP channel score calculation for weather channel.	integer	Minimum value: 0 Maximum value: 2000	0

## config wireless-controller ble-profile

Configure Bluetooth Low Energy profile.

```

config wireless-controller ble-profile
  Description: Configure Bluetooth Low Energy profile.
  edit <name>
    set advertising {option1}, {option2}, ...
    set beacon-interval {integer}
    set ble-scanning [enable|disable]
    set comment {string}
    set eddystone-instance {string}
    set eddystone-namespace {string}
    set eddystone-url {string}
    set ibeacon-uuid {string}
    set major-id {integer}
    set minor-id {integer}
    set txpower [0|1|...]
  next
end

```

## config wireless-controller ble-profile

Parameter	Description	Type	Size	Default								
advertising	Advertising type.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ibeacon</i></td><td>iBeacon advertising.</td></tr><tr><td><i>eddystone-uid</i></td><td>Eddystone UID advertising.</td></tr><tr><td><i>eddystone-url</i></td><td>Eddystone URL advertising.</td></tr></table>	Option	Description	<i>ibeacon</i>	iBeacon advertising.	<i>eddystone-uid</i>	Eddystone UID advertising.	<i>eddystone-url</i>	Eddystone URL advertising.			
Option	Description											
<i>ibeacon</i>	iBeacon advertising.											
<i>eddystone-uid</i>	Eddystone UID advertising.											
<i>eddystone-url</i>	Eddystone URL advertising.											
beacon-interval	Beacon interval.	integer	Minimum value: 40 Maximum value: 3500	100								
ble-scanning	Enable/disable Bluetooth Low Energy (BLE) scanning.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable BLE scanning.</td></tr><tr><td><i>disable</i></td><td>Disable BLE scanning.</td></tr></table>	Option	Description	<i>enable</i>	Enable BLE scanning.	<i>disable</i>	Disable BLE scanning.					
Option	Description											
<i>enable</i>	Enable BLE scanning.											
<i>disable</i>	Disable BLE scanning.											
comment	Comment.	string	Maximum length: 63									
eddystone-instance	Eddystone instance ID.	string	Maximum length: 12	abcdef								
eddystone-namespace	Eddystone namespace ID.	string	Maximum length: 20	0102030405								
eddystone-url	Eddystone URL.	string	Maximum length: 127	http://www.fortinet.com								
ibeacon-uuid	Universally Unique Identifier (UUID; automatically assigned but can be manually reset).	string	Maximum length: 63	005ea414-cbd1-11e5-9956-625662870761								
major-id	Major ID.	integer	Minimum value: 0 Maximum value: 65535	1000								
minor-id	Minor ID.	integer	Minimum value: 0 Maximum value: 65535	2000								

Parameter	Description	Type	Size	Default
name	Bluetooth Low Energy profile name.	string	Maximum length: 35	
txpower	Transmit power level.	option	-	0
	Option	Description		
	0	Transmit power level 0 (-21 dBm)		
	1	Transmit power level 1 (-18 dBm)		
	2	Transmit power level 2 (-15 dBm)		
	3	Transmit power level 3 (-12 dBm)		
	4	Transmit power level 4 (-9 dBm)		
	5	Transmit power level 5 (-6 dBm)		
	6	Transmit power level 6 (-3 dBm)		
	7	Transmit power level 7 (0 dBm)		
	8	Transmit power level 8 (1 dBm)		
	9	Transmit power level 9 (2 dBm)		
	10	Transmit power level 10 (3 dBm)		
	11	Transmit power level 11 (4 dBm)		
	12	Transmit power level 12 (5 dBm)		

## config wireless-controller bonjour-profile

Configure Bonjour profiles. Bonjour is Apple's zero configuration networking protocol. Bonjour profiles allow APs and FortiAPs to connect to networks using Bonjour.

```

config wireless-controller bonjour-profile
    Description: Configure Bonjour profiles. Bonjour is Apple's zero configuration
networking protocol. Bonjour profiles allow APs and FortiAPs to connect to networks using
Bonjour.
    edit <name>
        set comment {string}
        config policy-list
            Description: Bonjour policy list.
            edit <policy-id>
                set description {string}
                set from-vlan {string}
                set to-vlan {string}
                set services {option1}, {option2}, ...
            next
        end
    next
end

```

## config wireless-controller bonjour-profile

Parameter	Description	Type	Size	Default
comment	Comment.	string	Maximum length: 63	
name	Bonjour profile name.	string	Maximum length: 35	

## config policy-list

Parameter	Description	Type	Size	Default
policy-id	Policy ID.	integer	Minimum value: 1 Maximum value: 65535	0
description	Description.	string	Maximum length: 63	
from-vlan	VLAN ID from which the Bonjour service is advertised.	string	Maximum length: 63	0
to-vlan	VLAN ID to which the Bonjour service is made available.	string	Maximum length: 63	all
services	Bonjour services for the VLAN connecting to the Bonjour network.	option	-	all

Option	Description
<i>all</i>	All services.
<i>airplay</i>	AirPlay.
<i>afp</i>	AFP (Apple File Sharing).
<i>bit-torrent</i>	BitTorrent.
<i>ftp</i>	FTP.
<i>ichat</i>	iChat.
<i>itunes</i>	iTunes.
<i>printers</i>	Printers.
<i>samba</i>	Samba.
<i>scanners</i>	Scanners.
<i>ssh</i>	SSH.
<i>chromecast</i>	ChromeCast.

## config wireless-controller global

Configure wireless controller global settings.

```
config wireless-controller global
    Description: Configure wireless controller global settings.
    set acd-process-count {integer}
    set ap-log-server [enable|disable]
    set ap-log-server-ip {ipv4-address}
    set ap-log-server-port {integer}
    set control-message-offload {option1}, {option2}, ...
    set data-ethernet-II [enable|disable]
    set dfs-lab-test [enable|disable]
    set discovery-mc-addr {ipv4-address-multicast}
    set fiapp-eth-type {integer}
    set image-download [enable|disable]
    set ipsec-base-ip {ipv4-address}
    set link-aggregation [enable|disable]
    set local-radio-vdom {string}
    set location {string}
    set max-clients {integer}
    set max-retransmit {integer}
    set mesh-eth-type {integer}
    set nac-interval {integer}
    set name {string}
    set rogue-scan-mac-adjacency {integer}
    set tunnel-mode [compatible|strict]
    set wtp-share [enable|disable]
end
```

## config wireless-controller global

Parameter	Description	Type	Size	Default
acd-process-count	Configure the number cw_acd daemons for multi-core CPU support.	integer	Minimum value: 0 Maximum value: 255	0
ap-log-server	Enable/disable configuring FortiGate to redirect wireless event log messages or FortiAPs to send UTM log messages to a syslog server.	option	-	disable
	Option	Description		
	enable	Enable AP log server.		
	disable	Disable AP log server.		
ap-log-server-ip	IP address that FortiGate or FortiAPs send log messages to.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default																				
ap-log-server-port	Port that FortiGate or FortiAPs send log messages to.	integer	Minimum value: 0 Maximum value: 65535	0																				
control-message-offload	Configure CAPWAP control message data channel offload.	option	-	ebp-frame aeroscout-tag ap-list sta-list sta-cap-list stats aeroscout-mu sta-health spectral-analysis																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ebp-frame</td><td>Ekahau blink protocol (EBP) frames.</td></tr><tr><td>aeroscout-tag</td><td>AeroScout tag.</td></tr><tr><td>ap-list</td><td>Rogue AP list.</td></tr><tr><td>sta-list</td><td>Rogue STA list.</td></tr><tr><td>sta-cap-list</td><td>STA capability list.</td></tr><tr><td>stats</td><td>WTP, radio, VAP, and STA statistics.</td></tr><tr><td>aeroscout-mu</td><td>AeroScout Mobile Unit (MU) report.</td></tr><tr><td>sta-health</td><td>STA health log.</td></tr><tr><td>spectral-analysis</td><td>Spectral analysis report.</td></tr></table>				Option	Description	ebp-frame	Ekahau blink protocol (EBP) frames.	aeroscout-tag	AeroScout tag.	ap-list	Rogue AP list.	sta-list	Rogue STA list.	sta-cap-list	STA capability list.	stats	WTP, radio, VAP, and STA statistics.	aeroscout-mu	AeroScout Mobile Unit (MU) report.	sta-health	STA health log.	spectral-analysis	Spectral analysis report.
Option	Description																							
ebp-frame	Ekahau blink protocol (EBP) frames.																							
aeroscout-tag	AeroScout tag.																							
ap-list	Rogue AP list.																							
sta-list	Rogue STA list.																							
sta-cap-list	STA capability list.																							
stats	WTP, radio, VAP, and STA statistics.																							
aeroscout-mu	AeroScout Mobile Unit (MU) report.																							
sta-health	STA health log.																							
spectral-analysis	Spectral analysis report.																							
data-ethernet-II	Configure the wireless controller to use Ethernet II or 802.3 frames with 802.3 data tunnel mode.	option	-	enable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Use Ethernet II frames with 802.3 data tunnel mode.</td></tr><tr><td>disable</td><td>Use 802.3 Ethernet frames with 802.3 data tunnel mode.</td></tr></table>				Option	Description	enable	Use Ethernet II frames with 802.3 data tunnel mode.	disable	Use 802.3 Ethernet frames with 802.3 data tunnel mode.														
Option	Description																							
enable	Use Ethernet II frames with 802.3 data tunnel mode.																							
disable	Use 802.3 Ethernet frames with 802.3 data tunnel mode.																							
dfs-lab-test	Enable/disable DFS certificate lab test mode.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable DFS certificate lab test mode.</td></tr><tr><td>disable</td><td>Disable DFS certificate lab test mode.</td></tr></table>				Option	Description	enable	Enable DFS certificate lab test mode.	disable	Disable DFS certificate lab test mode.														
Option	Description																							
enable	Enable DFS certificate lab test mode.																							
disable	Disable DFS certificate lab test mode.																							

Parameter	Description	Type	Size	Default						
discovery-mc-addr	Multicast IP address for AP discovery.	ipv4-address-multicast	Not Specified	224.0.1.140						
fiapp-eth-type	Ethernet type for Fortinet Inter-Access Point Protocol.	integer	Minimum value: 0 Maximum value: 65535	5252						
image-download	Enable/disable WTP image download at join time.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WTP image download at join time.</td></tr><tr><td><i>disable</i></td><td>Disable WTP image download at join time.</td></tr></table>				Option	Description	<i>enable</i>	Enable WTP image download at join time.	<i>disable</i>	Disable WTP image download at join time.
Option	Description									
<i>enable</i>	Enable WTP image download at join time.									
<i>disable</i>	Disable WTP image download at join time.									
ipsec-base-ip	Base IP address for IPsec VPN tunnels between the access points and the wireless controller.	ipv4-address	Not Specified	169.254.0.1						
link-aggregation	Enable/disable calculating the CAPWAP transmit hash to load balance sessions to link aggregation nodes.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable calculating the CAPWAP transmit hash.</td></tr><tr><td><i>disable</i></td><td>Disable calculating the CAPWAP transmit hash.</td></tr></table>				Option	Description	<i>enable</i>	Enable calculating the CAPWAP transmit hash.	<i>disable</i>	Disable calculating the CAPWAP transmit hash.
Option	Description									
<i>enable</i>	Enable calculating the CAPWAP transmit hash.									
<i>disable</i>	Disable calculating the CAPWAP transmit hash.									
local-radio-vdom *	Assign local radio's virtual domain.	string	Maximum length: 31	root						
location	Description of the location of the wireless controller.	string	Maximum length: 35							
max-clients	Maximum number of clients that can connect simultaneously.	integer	Minimum value: 0 Maximum value: 4294967295	0						
max-retransmit	Maximum number of tunnel packet retransmissions.	integer	Minimum value: 0 Maximum value: 64	3						
mesh-eth-type	Mesh Ethernet identifier included in backhaul packets.	integer	Minimum value: 0 Maximum value: 65535	8755						

Parameter	Description	Type	Size	Default						
nac-interval	Interval in seconds between two WiFi network access control.	integer	Minimum value: 10 Maximum value: 600	120						
name	Name of the wireless controller.	string	Maximum length: 35							
rogue-scan-mac-adjacency	Maximum numerical difference between an AP's Ethernet and wireless MAC values to match for rogue detection.	integer	Minimum value: 0 Maximum value: 31	7						
tunnel-mode	Compatible/strict tunnel mode.	option	-	compatible						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>compatible</i></td><td>Allow for backward compatible ciphers(3DES+SHA1+Strong list).</td></tr><tr><td><i>strict</i></td><td>Follow system level strong-crypto ciphers.</td></tr></table>				Option	Description	<i>compatible</i>	Allow for backward compatible ciphers(3DES+SHA1+Strong list).	<i>strict</i>	Follow system level strong-crypto ciphers.
Option	Description									
<i>compatible</i>	Allow for backward compatible ciphers(3DES+SHA1+Strong list).									
<i>strict</i>	Follow system level strong-crypto ciphers.									
wtp-share	Enable/disable sharing of WTPs between VDOMs.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>WTP can be shared between all VDOMs.</td></tr><tr><td><i>disable</i></td><td>WTP can be used only in its own VDOM.</td></tr></table>				Option	Description	<i>enable</i>	WTP can be shared between all VDOMs.	<i>disable</i>	WTP can be used only in its own VDOM.
Option	Description									
<i>enable</i>	WTP can be shared between all VDOMs.									
<i>disable</i>	WTP can be used only in its own VDOM.									

\* This parameter may not exist in some models.

## config wireless-controller hotspot20 anqp-3gpp-cellular

Configure 3GPP public land mobile network (PLMN).

```

config wireless-controller hotspot20 anqp-3gpp-cellular
  Description: Configure 3GPP public land mobile network (PLMN).
  edit <name>
    config mcc-mnc-list
      Description: Mobile Country Code and Mobile Network Code configuration.
      edit <id>
        set mcc {string}

	<i>disable</i>	Disable basic service set (BSS) transition support.		
conn-cap	Connection capability name.	string	Maximum length: 35	
deauth-request-timeout	Deauthentication request timeout (in seconds).	integer	Minimum value: 30 Maximum value: 120	60
dgaf	Enable/disable downstream group-addressed forwarding (DGAF).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable downstream group-addressed forwarding (DGAF).		
	<i>disable</i>	Disable downstream group-addressed forwarding (DGAF).		
domain-name	Domain name.	string	Maximum length: 255	
gas-comeback-delay	GAS comeback delay.	integer	Minimum value: 100 Maximum value: 10000	500

Parameter	Description	Type	Size	Default						
gas-fragmentation-limit	GAS fragmentation limit.	integer	Minimum value: 512 Maximum value: 4096	1024						
hessid	Homogeneous extended service set identifier (HESSID).	mac-address	Not Specified	00:00:00:00:00:00						
ip-addr-type	IP address type name.	string	Maximum length: 35							
l2tif	Enable/disable Layer 2 traffic inspection and filtering.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Layer 2 traffic inspection and filtering.</td></tr><tr><td><i>disable</i></td><td>Disable Layer 2 traffic inspection and filtering.</td></tr></table>				Option	Description	<i>enable</i>	Enable Layer 2 traffic inspection and filtering.	<i>disable</i>	Disable Layer 2 traffic inspection and filtering.
Option	Description									
<i>enable</i>	Enable Layer 2 traffic inspection and filtering.									
<i>disable</i>	Disable Layer 2 traffic inspection and filtering.									
nai-realm	NAI realm list name.	string	Maximum length: 35							
name	Hotspot profile name.	string	Maximum length: 35							
network-auth	Network authentication name.	string	Maximum length: 35							
oper-friendly-name	Operator friendly name.	string	Maximum length: 35							
oper-icon	Operator icon.	string	Maximum length: 35							
osu-provider <name>	Manually selected list of OSU provider(s). OSU provider name.	string	Maximum length: 35							
osu-provider-nai	OSU Provider NAI.	string	Maximum length: 35							
osu-ssid	Online sign up (OSU) SSID.	string	Maximum length: 255							
pame-bi	Enable/disable Pre-Association Message Exchange BSSID Independent (PAME-BI).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Pre-Association Message Exchange BSSID Independent (PAME-BI).</td></tr><tr><td><i>enable</i></td><td>Enable Pre-Association Message Exchange BSSID Independent (PAME-BI).</td></tr></table>				Option	Description	<i>disable</i>	Disable Pre-Association Message Exchange BSSID Independent (PAME-BI).	<i>enable</i>	Enable Pre-Association Message Exchange BSSID Independent (PAME-BI).
Option	Description									
<i>disable</i>	Disable Pre-Association Message Exchange BSSID Independent (PAME-BI).									
<i>enable</i>	Enable Pre-Association Message Exchange BSSID Independent (PAME-BI).									

Parameter	Description	Type	Size	Default
proxy-arp	Enable/disable Proxy ARP.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Proxy ARP.		
	<i>disable</i>	Disable Proxy ARP.		
qos-map	QoS MAP set ID.	string	Maximum length: 35	
release	Hotspot 2.0 Release number.	integer	Minimum value: 1 Maximum value: 3	2
roaming-consortium	Roaming consortium list name.	string	Maximum length: 35	
terms-and-conditions	Terms and conditions.	string	Maximum length: 35	
venue-group	Venue group.	option	-	unspecified
	<b>Option</b>	<b>Description</b>		
	<i>unspecified</i>	Unspecified.		
	<i>assembly</i>	Assembly.		
	<i>business</i>	Business.		
	<i>educational</i>	Educational.		
	<i>factory</i>	Factory and industrial.		
	<i>institutional</i>	Institutional.		
	<i>mercantile</i>	Mercantile.		
	<i>residential</i>	Residential.		
	<i>storage</i>	Storage.		
	<i>utility</i>	Utility and miscellaneous.		
	<i>vehicular</i>	Vehicular.		
	<i>outdoor</i>	Outdoor.		
venue-name	Venue name.	string	Maximum length: 35	
venue-type	Venue type.	option	-	unspecified

Parameter	Description	Type	Size	Default
-----------	-------------	------	------	---------

Option	Description
<i>unspecified</i>	Unspecified.
<i>arena</i>	Arena.
<i>stadium</i>	Stadium.
<i>passenger-terminal</i>	Passenger terminal.
<i>amphitheater</i>	Amphitheater.
<i>amusement-park</i>	Amusement park.
<i>place-of-worship</i>	Place of worship.
<i>convention-center</i>	Convention center.
<i>library</i>	Library.
<i>museum</i>	Museum.
<i>restaurant</i>	Restaurant.
<i>theater</i>	Theater.
<i>bar</i>	Bar.
<i>coffee-shop</i>	Coffee shop.
<i>zoo-or-aquarium</i>	Zoo or aquarium.
<i>emergency-center</i>	Emergency coordination center.
<i>doctor-office</i>	Doctor or dentist office.
<i>bank</i>	Bank.
<i>fire-station</i>	Fire station.
<i>police-station</i>	Police station.
<i>post-office</i>	Post office.
<i>professional-office</i>	Professional office.
<i>research-facility</i>	Research and development facility.
<i>attorney-office</i>	Attorney office.
<i>primary-school</i>	Primary school.

Parameter	Description	Type	Size	Default
-----------	-------------	------	------	---------

Option	Description
<i>secondary-school</i>	Secondary school.
<i>university-or-college</i>	University or college.
<i>factory</i>	Factory.
<i>hospital</i>	Hospital.
<i>long-term-care-facility</i>	Long term care facility.
<i>rehab-center</i>	Alcohol and drug rehabilitation center.
<i>group-home</i>	Group home.
<i>prison-or-jail</i>	Prison or jail.
<i>retail-store</i>	Retail store.
<i>grocery-market</i>	Grocery market.
<i>auto-service-station</i>	Auto service station.
<i>shopping-mall</i>	Shopping mall.
<i>gas-station</i>	Gas station.
<i>private</i>	Private residence.
<i>hotel-or-motel</i>	Hotel or motel.
<i>dormitory</i>	Dormitory.
<i>boarding-house</i>	Boarding house.
<i>automobile</i>	Automobile or truck.
<i>airplane</i>	Airplane.
<i>bus</i>	Bus.
<i>ferry</i>	Ferry.
<i>ship-or-boat</i>	Ship or boat.
<i>train</i>	Train.
<i>motor-bike</i>	Motor bike.

## config wireless-controller hotspot20 qos-map

Configure QoS map set.

```
config wireless-controller hotspot20 qos-map
  Description: Configure QoS map set.
  edit <name>
```

```

config dscp-except
    Description: Differentiated Services Code Point (DSCP) exceptions.
    edit <index>
        set dscp {integer}
        set up {integer}
    next
end
config dscp-range
    Description: Differentiated Services Code Point (DSCP) ranges.
    edit <index>
        set up {integer}
        set low {integer}
        set high {integer}
    next
end
next
end

```

## config wireless-controller hotspot20 qos-map

Parameter	Description	Type	Size	Default
name	QOS-MAP name.	string	Maximum length: 35	

## config dscp-except

Parameter	Description	Type	Size	Default
index	DSCP exception index.	integer	Minimum value: 1 Maximum value: 21	0
dscp	DSCP value.	integer	Minimum value: 0 Maximum value: 63	0
up	User priority.	integer	Minimum value: 0 Maximum value: 7	0

## config dscp-range

Parameter	Description	Type	Size	Default
index	DSCP range index.	integer	Minimum value: 1 Maximum value: 8	0
up	User priority.	integer	Minimum value: 0 Maximum value: 7	0
low	DSCP low value.	integer	Minimum value: 0 Maximum value: 63	255
high	DSCP high value.	integer	Minimum value: 0 Maximum value: 63	255

## config wireless-controller inter-controller

Configure inter wireless controller operation.

```
config wireless-controller inter-controller
  Description: Configure inter wireless controller operation.
  set fast-failover-max {integer}
  set fast-failover-wait {integer}
  set inter-controller-key {password}
  set inter-controller-mode [disable|l2-roaming|...]
  config inter-controller-peer
    Description: Fast failover peer wireless controller list.
    edit <id>
      set peer-ip {ipv4-address}
      set peer-port {integer}
      set peer-priority [primary|secondary]
    next
  end
  set inter-controller-pri [primary|secondary]
  set l3-roaming [enable|disable]
end
```

## config wireless-controller inter-controller

Parameter	Description	Type	Size	Default								
fast-failover-max	Maximum number of retransmissions for fast failover HA messages between peer wireless controllers.	integer	Minimum value: 3 Maximum value: 64	10								
fast-failover-wait	Minimum wait time before an AP transitions from secondary controller to primary controller.	integer	Minimum value: 10 Maximum value: 86400	10								
inter-controller-key	Secret key for inter-controller communications.	password	Not Specified									
inter-controller-mode	Configure inter-controller mode.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable inter-controller mode.</td></tr><tr><td>l2-roaming</td><td>Enable layer 2 roaming support between inter-controllers.</td></tr><tr><td>1+1</td><td>Enable 1+1 fast failover mode.</td></tr></table>				Option	Description	disable	Disable inter-controller mode.	l2-roaming	Enable layer 2 roaming support between inter-controllers.	1+1	Enable 1+1 fast failover mode.
Option	Description											
disable	Disable inter-controller mode.											
l2-roaming	Enable layer 2 roaming support between inter-controllers.											
1+1	Enable 1+1 fast failover mode.											
inter-controller-pri	Configure inter-controller's priority.	option	-	primary								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>primary</td><td>Primary fast failover mode.</td></tr><tr><td>secondary</td><td>Secondary fast failover mode.</td></tr></table>				Option	Description	primary	Primary fast failover mode.	secondary	Secondary fast failover mode.		
Option	Description											
primary	Primary fast failover mode.											
secondary	Secondary fast failover mode.											
l3-roaming	Enable/disable layer 3 roaming.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable layer 3 roaming.</td></tr><tr><td>disable</td><td>Disable layer 3 roaming.</td></tr></table>				Option	Description	enable	Enable layer 3 roaming.	disable	Disable layer 3 roaming.		
Option	Description											
enable	Enable layer 3 roaming.											
disable	Disable layer 3 roaming.											

## config inter-controller-peer

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
peer-ip	Peer wireless controller's IP address.	ipv4-address	Not Specified	0.0.0.0
peer-port	Port used by the wireless controller's for inter-controller communications.	integer	Minimum value: 1024 Maximum value: 49150	5246
peer-priority	Peer wireless controller's priority.	option	-	primary
	Option	Description		
	primary	Primary fast failover mode.		
	secondary	Secondary fast failover mode.		

## config wireless-controller log

Configure wireless controller event log filters.

```
config wireless-controller log
  Description: Configure wireless controller event log filters.
  set addrgrp-log [emergency|alert|...]
  set ble-log [emergency|alert|...]
  set clb-log [emergency|alert|...]
  set dhcp-starv-log [emergency|alert|...]
  set led-sched-log [emergency|alert|...]
  set radio-event-log [emergency|alert|...]
  set rogue-event-log [emergency|alert|...]
  set sta-event-log [emergency|alert|...]
  set sta-locate-log [emergency|alert|...]
  set status [enable|disable]
  set wids-log [emergency|alert|...]
  set wtp-event-log [emergency|alert|...]
end
```

    config mpsk-group
      Description: List of multiple PSK groups.
      edit <name>
        set vlan-type [no-vlan|fixed-vlan]
        set vlan-id {integer}
        config mpsk-key
          Description: List of multiple PSK entries.
          edit <name>
            set mac {mac-address}
            set passphrase {password}
            set concurrent-client-limit-type [default|unlimited|...]
            set concurrent-clients {integer}
            set comment {var-string}
            set mpsk-schedules <name1>, <name2>, ...
          next
        end
      next
    end
  next
end

```

## config wireless-controller mpsk-profile

Parameter	Description	Type	Size	Default
mpsk-concurrent-clients	Maximum number of concurrent clients that connect using the same passphrase in multiple PSK authentication.	integer	Minimum value: 0 Maximum value: 65535	0
name	MPSK profile name.	string	Maximum length: 35	

## config mpsk-group

Parameter	Description	Type	Size	Default
name	MPSK group name.	string	Maximum length: 35	
vlan-type	MPSK group VLAN options.	option	-	no-vlan
	<b>Option</b>		<b>Description</b>	
	<i>no-vlan</i>		No VLAN.	
	<i>fixed-vlan</i>		Fixed VLAN ID.	
vlan-id	Optional VLAN ID.	integer	Minimum value: 1 Maximum value: 4094	0

## config mpsk-key

Parameter	Description	Type	Size	Default
name	Pre-shared key name.	string	Maximum length: 35	
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00
passphrase	WPA Pre-shared key.	password	Not Specified	
concurrent-client-limit-type	MPSK client limit type options.	option	-	default
	<b>Option</b>		<b>Description</b>	
	<i>default</i>		Using the value in profile configuration.	
	<i>unlimited</i>		Unlimited.	
	<i>specified</i>		Specified value.	
concurrent-clients	Number of clients that can connect using this pre-shared key.	integer	Minimum value: 1 Maximum value: 65535	256
comment	Comment.	var-string	Maximum length: 255	

Parameter	Description	Type	Size	Default
mpsk-schedules <name>	Firewall schedule for MPSK passphrase. The passphrase will be effective only when at least one schedule is valid. Schedule name.	string	Maximum length: 35	

## config wireless-controller nac-profile

Configure WiFi network access control (NAC) profiles.

```
config wireless-controller nac-profile
    Description: Configure WiFi network access control (NAC) profiles.
    edit <name>
        set comment {var-string}
        set onboarding-vlan {string}
    next
end
```

## config wireless-controller nac-profile

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
name	Name.	string	Maximum length: 35	
onboarding-vlan	VLAN interface name.	string	Maximum length: 35	

## config wireless-controller qos-profile

Configure WiFi quality of service (QoS) profiles.

```
config wireless-controller qos-profile
    Description: Configure WiFi quality of service (QoS) profiles.
    edit <name>
        set bandwidth-admission-control [enable|disable]

Option	Description									
enable	Enable Differentiated Services Code Point (DSCP) mapping.									
disable	Disable Differentiated Services Code Point (DSCP) mapping.									
dscp-wmm-vi<id>	DSCP mapping for video access (default = 32 40). DSCP WMM mapping numbers (0 - 63).	integer	Minimum value: 0 Maximum value: 63							
dscp-wmm-vo<id>	DSCP mapping for voice access (default = 48 56). DSCP WMM mapping numbers (0 - 63).	integer	Minimum value: 0 Maximum value: 63							
name	WiFi QoS profile name.	string	Maximum length: 35							

Parameter	Description	Type	Size	Default						
uplink	Maximum uplink bandwidth for Virtual Access Points.	integer	Minimum value: 0 Maximum value: 2097152	0						
uplink-sta	Maximum uplink bandwidth for clients.	integer	Minimum value: 0 Maximum value: 2097152	0						
wmm	Enable/disable WiFi multi-media (WMM) control.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WiFi multi-media (WMM) control.</td></tr><tr><td><i>disable</i></td><td>Disable WiFi multi-media (WMM) control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WiFi multi-media (WMM) control.	<i>disable</i>	Disable WiFi multi-media (WMM) control.			
Option	Description									
<i>enable</i>	Enable WiFi multi-media (WMM) control.									
<i>disable</i>	Disable WiFi multi-media (WMM) control.									
wmm-be-dscp	DSCP marking for best effort access.	integer	Minimum value: 0 Maximum value: 63	0						
wmm-bk-dscp	DSCP marking for background access.	integer	Minimum value: 0 Maximum value: 63	8						
wmm-dscp-marking	Enable/disable WMM Differentiated Services Code Point (DSCP) marking.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM Differentiated Services Code Point (DSCP) marking.</td></tr><tr><td><i>disable</i></td><td>Disable WMM Differentiated Services Code Point (DSCP) marking.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM Differentiated Services Code Point (DSCP) marking.	<i>disable</i>	Disable WMM Differentiated Services Code Point (DSCP) marking.			
Option	Description									
<i>enable</i>	Enable WMM Differentiated Services Code Point (DSCP) marking.									
<i>disable</i>	Disable WMM Differentiated Services Code Point (DSCP) marking.									
wmm-uapsd	Enable/disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.</td></tr><tr><td><i>disable</i></td><td>Disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.	<i>disable</i>	Disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.			
Option	Description									
<i>enable</i>	Enable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.									
<i>disable</i>	Disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.									

Parameter	Description	Type	Size	Default
wmm-vi-dscp	DSCP marking for video access.	integer	Minimum value: 0 Maximum value: 63	32
wmm-vo-dscp	DSCP marking for voice access.	integer	Minimum value: 0 Maximum value: 63	48

## config wireless-controller region

Configure FortiAP regions (for floor plans and maps).

```
config wireless-controller region
    Description: Configure FortiAP regions (for floor plans and maps).
    edit <name>
        set comments {string}
        set grayscale [enable|disable]
        set opacity {integer}
    next
end
```

## config wireless-controller region

Parameter	Description	Type	Size	Default						
comments	Comments.	string	Maximum length: 1027							
grayscale	Region image grayscale.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable region image grayscale.</td></tr><tr><td><i>disable</i></td><td>Disable region image grayscale.</td></tr></table>				Option	Description	<i>enable</i>	Enable region image grayscale.	<i>disable</i>	Disable region image grayscale.
	Option	Description								
	<i>enable</i>	Enable region image grayscale.								
<i>disable</i>	Disable region image grayscale.									
name	FortiAP region name.	string	Maximum length: 35							
opacity	Region image opacity.	integer	Minimum value: 0 Maximum value: 100	100						

## config wireless-controller setting

VDOM wireless controller configuration.

```

config wireless-controller setting
    Description: VDOM wireless controller configuration.
    set account-id {string}
    set country [--|AF|...]
    set darrp-optimize {integer}
    set darrp-optimize-schedules <name1>, <name2>, ...
    set device-holdoff {integer}
    set device-idle {integer}
    set device-weight {integer}
    set duplicate-ssid [enable|disable]
    set fake-ssid-action {option1}, {option2}, ...
    set fapc-compatibility [enable|disable]
    set firmware-provision-on-authorization [enable|disable]
config offending-ssid
    Description: Configure offending SSID.
    edit <id>
        set ssid-pattern {string}
        set action {option1}, {option2}, ...
    next
end
set phishing-ssid-detect [enable|disable]
set wfa-compatibility [enable|disable]
end

```

### config wireless-controller snmp

Parameter	Description	Type	Size	Default
contact-info	Contact Information.	string	Maximum length: 31	
engine-id	AC SNMP engineID string (maximum 24 characters).	string	Maximum length: 23	
trap-high-cpu-threshold	CPU usage when trap is sent.	integer	Minimum value: 10 Maximum value: 100	80
trap-high-mem-threshold	Memory usage when trap is sent.	integer	Minimum value: 10 Maximum value: 100	80

### config community

Parameter	Description	Type	Size	Default
id	Community ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Community name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
status	Enable/disable this SNMP community.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
query-v1-status	Enable/disable SNMP v1 queries.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
query-v2c-status	Enable/disable SNMP v2c queries.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
trap-v1-status	Enable/disable SNMP v1 traps.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
trap-v2c-status	Enable/disable SNMP v2c traps.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

## config hosts

Parameter	Description	Type	Size	Default
id	Host entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ip	IPv4 address of the SNMP manager (host).	user	Not Specified	

## config user

Parameter	Description	Type	Size	Default
name	SNMP user name.	string	Maximum length: 32	
status	SNMP user enable.	option	-	enable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
queries	Enable/disable SNMP queries for this user.	option	-	enable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
trap-status	Enable/disable traps for this SNMP user.	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
security-level	Security level for message authentication and encryption.	option	-	no-auth-no-priv
	Option	Description		
	no-auth-no-priv	Message with no authentication and no privacy (encryption).		
	auth-no-priv	Message with authentication but no privacy (encryption).		
	auth-priv	Message with authentication and privacy (encryption).		
auth-proto	Authentication protocol.	option	-	sha
	Option	Description		
	md5	HMAC-MD5-96 authentication protocol.		
	sha	HMAC-SHA-96 authentication protocol.		
auth-pwd	Password for authentication protocol.	password	Not Specified	
priv-proto	Privacy (encryption) protocol.	option	-	aes

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>aes</i>	CFB128-AES-128 symmetric encryption protocol.		
	<i>des</i>	CBC-DES symmetric encryption protocol.		
	<i>aes256</i>	CFB128-AES-256 symmetric encryption protocol.		
	<i>aes256cisco</i>	CFB128-AES-256 symmetric encryption protocol compatible with CISCO.		
priv-pwd	Password for privacy (encryption) protocol.	password	Not Specified	
notify-hosts	Configure SNMP User Notify Hosts.	ipv4-address	Not Specified	

## config wireless-controller ssid-policy

Configure WiFi SSID policies.

```
config wireless-controller ssid-policy
  Description: Configure WiFi SSID policies.
  edit <name>
    set description {var-string}
    set vlan {string}
  next
end
```

## config wireless-controller ssid-policy

Parameter	Description	Type	Size	Default
description	Description.	var-string	Maximum length: 255	
name	Name.	string	Maximum length: 35	
vlan	VLAN interface name.	string	Maximum length: 35	

## config wireless-controller syslog-profile

Configure Wireless Termination Points (WTP) system log server profile.

```
config wireless-controller syslog-profile
  Description: Configure Wireless Termination Points (WTP) system log server profile.
  edit <name>
    set comment {var-string}
    set log-level [emergency|alert|...]
  next
end
```

```

        set server-addr-type [fqdn|ip]
        set server-fqdn {string}
        set server-ip {ipv4-address}
        set server-port {integer}
        set server-status [enable|disable]
    next
end

```

## config wireless-controller syslog-profile

Parameter	Description	Type	Size	Default																		
comment	Comment.	var-string	Maximum length: 255																			
log-level	Lowest level of log messages that FortiAP units send to this server.	option	-	information																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>emergency</i></td><td>Level 0</td></tr><tr><td><i>alert</i></td><td>Level 1</td></tr><tr><td><i>critical</i></td><td>Level 2</td></tr><tr><td><i>error</i></td><td>Level 3</td></tr><tr><td><i>warning</i></td><td>Level 4</td></tr><tr><td><i>notification</i></td><td>Level 5</td></tr><tr><td><i>information</i></td><td>Level 6</td></tr><tr><td><i>debugging</i></td><td>Level 7</td></tr></table>				Option	Description	<i>emergency</i>	Level 0	<i>alert</i>	Level 1	<i>critical</i>	Level 2	<i>error</i>	Level 3	<i>warning</i>	Level 4	<i>notification</i>	Level 5	<i>information</i>	Level 6	<i>debugging</i>	Level 7
	Option	Description																				
	<i>emergency</i>	Level 0																				
	<i>alert</i>	Level 1																				
	<i>critical</i>	Level 2																				
	<i>error</i>	Level 3																				
	<i>warning</i>	Level 4																				
	<i>notification</i>	Level 5																				
	<i>information</i>	Level 6																				
<i>debugging</i>	Level 7																					
name	WTP system log server profile name.	string	Maximum length: 35																			
server-addr-type	Syslog server address type.	option	-	ip																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fqdn</i></td><td>Fully Qualified Domain Name address.</td></tr><tr><td><i>ip</i></td><td>IPv4 address.</td></tr></table>				Option	Description	<i>fqdn</i>	Fully Qualified Domain Name address.	<i>ip</i>	IPv4 address.												
	Option	Description																				
	<i>fqdn</i>	Fully Qualified Domain Name address.																				
<i>ip</i>	IPv4 address.																					
server-fqdn	FQDN of syslog server that FortiAP units send log messages to.	string	Maximum length: 63																			
server-ip	IP address of syslog server that FortiAP units send log messages to.	ipv4-address	Not Specified	0.0.0.0																		

Parameter	Description	Type	Size	Default
server-port	Port number of syslog server that FortiAP units send log messages to.	integer	Minimum value: 0 Maximum value: 65535	514
server-status	Enable/disable FortiAP units to send log messages to a syslog server.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable syslog server.		
	<i>disable</i>	Disable syslog server.		

## config wireless-controller timers

Configure CAPWAP timers.

```
config wireless-controller timers
  Description: Configure CAPWAP timers.
  set auth-timeout {integer}
  set ble-scan-report-intv {integer}
  set client-idle-rehome-timeout {integer}
  set client-idle-timeout {integer}
  set discovery-interval {integer}
  set drma-interval {integer}
  set echo-interval {integer}
  set fake-ap-log {integer}
  set ipsec-intf-cleanup {integer}
  set radio-stats-interval {integer}
  set rogue-ap-cleanup {integer}
  set rogue-ap-log {integer}
  set sta-capability-interval {integer}
  set sta-locate-timer {integer}
  set sta-stats-interval {integer}
  set vap-stats-interval {integer}
end
```

## config wireless-controller timers

Parameter	Description	Type	Size	Default
auth-timeout	Time after which a client is considered failed in RADIUS authentication and times out.	integer	Minimum value: 5 Maximum value: 30	5

Parameter	Description	Type	Size	Default
ble-scan-report-intv	Time between running Bluetooth Low Energy.	integer	Minimum value: 10 Maximum value: 3600	30
client-idle-rehome-timeout	Time after which a client is considered idle and disconnected from the home controller.	integer	Minimum value: 2 Maximum value: 3600	20
client-idle-timeout	Time after which a client is considered idle and times out.	integer	Minimum value: 20 Maximum value: 3600	300
discovery-interval	Time between discovery requests.	integer	Minimum value: 2 Maximum value: 180	5
drma-interval	Dynamic radio mode assignment.	integer	Minimum value: 1 Maximum value: 1440	60
echo-interval	Time between echo requests sent by the managed WTP, AP, or FortiAP.	integer	Minimum value: 1 Maximum value: 255	30
fake-ap-log	Time between recording logs about fake APs if periodic fake AP logging is configured.	integer	Minimum value: 1 Maximum value: 1440	1
ipsec-intf-cleanup	Time period to keep IPsec VPN interfaces up after WTP sessions are disconnected.	integer	Minimum value: 30 Maximum value: 3600	120
radio-stats-interval	Time between running radio reports.	integer	Minimum value: 1 Maximum value: 255	15
rogue-ap-cleanup	Time period in minutes to keep rogue AP after it is gone.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
rogue-ap-log	Time between logging rogue AP messages if periodic rogue AP logging is configured.	integer	Minimum value: 0 Maximum value: 1440	0
sta-capability-interval	Time between running station capability reports.	integer	Minimum value: 1 Maximum value: 255	30
sta-locate-timer	Time between running client presence flushes to remove clients that are listed but no longer present.	integer	Minimum value: 0 Maximum value: 86400	1800
sta-stats-interval	Time between running client.	integer	Minimum value: 1 Maximum value: 255	1
vap-stats-interval	Time between running Virtual Access Point.	integer	Minimum value: 1 Maximum value: 255	15

## config wireless-controller utm-profile

Configure UTM (Unified Threat Management) profile.

```
config wireless-controller utm-profile
  Description: Configure UTM (Unified Threat Management) profile.
  edit <name>
    set antivirus-profile {string}
    set application-list {string}
    set comment {string}
    set ips-sensor {string}
    set scan-botnet-connections [disable|monitor|...]
    set utm-log [enable|disable]
    set webfilter-profile {string}
  next
end
```

## config wireless-controller utm-profile

Parameter	Description	Type	Size	Default
antivirus-profile	AntiVirus profile name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default								
application-list	Application control list name.	string	Maximum length: 35									
comment	Comment.	string	Maximum length: 63									
ips-sensor	IPS sensor name.	string	Maximum length: 35									
name	UTM profile name.	string	Maximum length: 35									
scan-botnet-connections	Block or monitor connections to Botnet servers or disable Botnet scanning.	option	-	monitor								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not scan connections to botnet servers.</td></tr><tr><td><i>monitor</i></td><td>Log connections to botnet servers.</td></tr><tr><td><i>block</i></td><td>Block connections to botnet servers.</td></tr></table>				Option	Description	<i>disable</i>	Do not scan connections to botnet servers.	<i>monitor</i>	Log connections to botnet servers.	<i>block</i>	Block connections to botnet servers.
Option	Description											
<i>disable</i>	Do not scan connections to botnet servers.											
<i>monitor</i>	Log connections to botnet servers.											
<i>block</i>	Block connections to botnet servers.											
utm-log	Enable/disable UTM logging.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable UTM logging.</td></tr><tr><td><i>disable</i></td><td>Disable UTM logging.</td></tr></table>				Option	Description	<i>enable</i>	Enable UTM logging.	<i>disable</i>	Disable UTM logging.		
Option	Description											
<i>enable</i>	Enable UTM logging.											
<i>disable</i>	Disable UTM logging.											
webfilter-profile	WebFilter profile name.	string	Maximum length: 35									

## config wireless-controller vap-group

Configure virtual Access Point (VAP) groups.

```
config wireless-controller vap-group
    Description: Configure virtual Access Point (VAP) groups.
    edit <name>
        set comment {var-string}
        set vaps <name1>, <name2>, ...
    next
end
```

## config wireless-controller vap-group

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
name	Group Name.	string	Maximum length: 35	
vaps <name>	List of SSIDs to be included in the VAP group. VAP name.	string	Maximum length: 35	

## config wireless-controller vap

Configure Virtual Access Points (VAPs).

```
config wireless-controller vap
  Description: Configure Virtual Access Points (VAPs).
  edit <name>
    set access-control-list {string}

	Option	Description																				
	<i>radius</i>	Use a RADIUS server to authenticate clients.																				
<i>usergroup</i>	Use a firewall usergroup to authenticate clients.																					
auth-cert	HTTPS server certificate.	string	Maximum length: 35																			
auth-portal-addr	Address of captive portal.	string	Maximum length: 63																			
beacon-advertising	Fortinet beacon advertising IE data .	option	-																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>name</i></td><td>AP name.</td></tr><tr><td><i>model</i></td><td>AP model abbreviation.</td></tr><tr><td><i>serial-number</i></td><td>AP serial number.</td></tr></table>				Option	Description	<i>name</i>	AP name.	<i>model</i>	AP model abbreviation.	<i>serial-number</i>	AP serial number.										
	Option	Description																				
	<i>name</i>	AP name.																				
	<i>model</i>	AP model abbreviation.																				
<i>serial-number</i>	AP serial number.																					
broadcast-ssid	Enable/disable broadcasting the SSID.	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable broadcasting the SSID.</td></tr><tr><td><i>disable</i></td><td>Disable broadcasting the SSID.</td></tr></table>				Option	Description	<i>enable</i>	Enable broadcasting the SSID.	<i>disable</i>	Disable broadcasting the SSID.												
	Option	Description																				
	<i>enable</i>	Enable broadcasting the SSID.																				
<i>disable</i>	Disable broadcasting the SSID.																					
broadcast-suppression	Optional suppression of broadcast messages. For example, you can keep DHCP messages, ARP broadcasts, and so on off of the wireless network.	option	-	dhcp-up dhcp-ucast arp-known																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dhcp-up</i></td><td>Suppress broadcast uplink DHCP messages.</td></tr><tr><td><i>dhcp-down</i></td><td>Suppress broadcast downlink DHCP messages.</td></tr><tr><td><i>dhcp-starvation</i></td><td>Suppress broadcast DHCP starvation req messages.</td></tr><tr><td><i>dhcp-ucast</i></td><td>Convert downlink broadcast DHCP messages to unicast messages.</td></tr><tr><td><i>arp-known</i></td><td>Suppress broadcast ARP for known wireless clients.</td></tr><tr><td><i>arp-unknown</i></td><td>Suppress broadcast ARP for unknown wireless clients.</td></tr><tr><td><i>arp-reply</i></td><td>Suppress broadcast ARP reply from wireless clients.</td></tr><tr><td><i>arp-poison</i></td><td>Suppress ARP poison messages from wireless clients.</td></tr></table>				Option	Description	<i>dhcp-up</i>	Suppress broadcast uplink DHCP messages.	<i>dhcp-down</i>	Suppress broadcast downlink DHCP messages.	<i>dhcp-starvation</i>	Suppress broadcast DHCP starvation req messages.	<i>dhcp-ucast</i>	Convert downlink broadcast DHCP messages to unicast messages.	<i>arp-known</i>	Suppress broadcast ARP for known wireless clients.	<i>arp-unknown</i>	Suppress broadcast ARP for unknown wireless clients.	<i>arp-reply</i>	Suppress broadcast ARP reply from wireless clients.	<i>arp-poison</i>	Suppress ARP poison messages from wireless clients.
	Option	Description																				
	<i>dhcp-up</i>	Suppress broadcast uplink DHCP messages.																				
	<i>dhcp-down</i>	Suppress broadcast downlink DHCP messages.																				
	<i>dhcp-starvation</i>	Suppress broadcast DHCP starvation req messages.																				
	<i>dhcp-ucast</i>	Convert downlink broadcast DHCP messages to unicast messages.																				
	<i>arp-known</i>	Suppress broadcast ARP for known wireless clients.																				
	<i>arp-unknown</i>	Suppress broadcast ARP for unknown wireless clients.																				
<i>arp-reply</i>	Suppress broadcast ARP reply from wireless clients.																					
<i>arp-poison</i>	Suppress ARP poison messages from wireless clients.																					

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>arp-proxy</i></td><td>Reply ARP requests for wireless clients as a proxy.</td></tr><tr><td><i>netbios-ns</i></td><td>Suppress NetBIOS name services packets with UDP port 137.</td></tr><tr><td><i>netbios-ds</i></td><td>Suppress NetBIOS datagram services packets with UDP port 138.</td></tr><tr><td><i>ipv6</i></td><td>Suppress IPv6 packets.</td></tr><tr><td><i>all-other-mc</i></td><td>Suppress all other multicast messages.</td></tr><tr><td><i>all-other-bc</i></td><td>Suppress all other broadcast messages.</td></tr></table>	Option	Description	<i>arp-proxy</i>	Reply ARP requests for wireless clients as a proxy.	<i>netbios-ns</i>	Suppress NetBIOS name services packets with UDP port 137.	<i>netbios-ds</i>	Suppress NetBIOS datagram services packets with UDP port 138.	<i>ipv6</i>	Suppress IPv6 packets.	<i>all-other-mc</i>	Suppress all other multicast messages.	<i>all-other-bc</i>	Suppress all other broadcast messages.			
	Option	Description																
	<i>arp-proxy</i>	Reply ARP requests for wireless clients as a proxy.																
	<i>netbios-ns</i>	Suppress NetBIOS name services packets with UDP port 137.																
	<i>netbios-ds</i>	Suppress NetBIOS datagram services packets with UDP port 138.																
	<i>ipv6</i>	Suppress IPv6 packets.																
	<i>all-other-mc</i>	Suppress all other multicast messages.																
<i>all-other-bc</i>	Suppress all other broadcast messages.																	
bss-color-partial	Enable/disable 802.11ax partial BSS color.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11ax partial BSS color.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11ax partial BSS color.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11ax partial BSS color.	<i>disable</i>	Disable 802.11ax partial BSS color.											
	Option	Description																
	<i>enable</i>	Enable 802.11ax partial BSS color.																
<i>disable</i>	Disable 802.11ax partial BSS color.																	
bstm-disassociation-imminent	Enable/disable forcing of disassociation after the BSTM request timer has been reached.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable BSTM disassociation imminent.</td></tr><tr><td><i>disable</i></td><td>Disable BSTM disassociation imminent.</td></tr></table>	Option	Description	<i>enable</i>	Enable BSTM disassociation imminent.	<i>disable</i>	Disable BSTM disassociation imminent.											
	Option	Description																
	<i>enable</i>	Enable BSTM disassociation imminent.																
<i>disable</i>	Disable BSTM disassociation imminent.																	
bstm-load-balancing-disassoc-timer	Time interval for client to voluntarily leave AP before forcing a disassociation due to AP load-balancing.	integer	Minimum value: 1 Maximum value: 30	10														
bstm-rssi-disassoc-timer	Time interval for client to voluntarily leave AP before forcing a disassociation due to low RSSI.	integer	Minimum value: 1 Maximum value: 2000	200														
captive-portal-ac-name	Local-bridging captive portal ac-name.	string	Maximum length: 35															
captive-portal-auth-timeout	Hard timeout - AP will always clear the session after timeout regardless of traffic.	integer	Minimum value: 0 Maximum value: 864000	0														
captive-portal-fw-accounting	Enable/disable RADIUS accounting for captive portal firewall authentication session.	option	-	disable														

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS accounting for captive portal firewall authentication session.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS accounting for captive portal firewall authentication session.</td></tr></table>				Option	Description	<i>enable</i>	Enable RADIUS accounting for captive portal firewall authentication session.	<i>disable</i>	Disable RADIUS accounting for captive portal firewall authentication session.				
	Option	Description												
	<i>enable</i>	Enable RADIUS accounting for captive portal firewall authentication session.												
<i>disable</i>	Disable RADIUS accounting for captive portal firewall authentication session.													
dhcp-address-enforcement	Enable/disable DHCP address enforcement.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP enforcement, data from clients that have not completed the DHCP process will be blocked.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP enforcement, clients can access the network without DHCP process.</td></tr></table>				Option	Description	<i>enable</i>	Enable DHCP enforcement, data from clients that have not completed the DHCP process will be blocked.	<i>disable</i>	Disable DHCP enforcement, clients can access the network without DHCP process.				
	Option	Description												
	<i>enable</i>	Enable DHCP enforcement, data from clients that have not completed the DHCP process will be blocked.												
<i>disable</i>	Disable DHCP enforcement, clients can access the network without DHCP process.													
dhcp-lease-time	DHCP lease time in seconds for NAT IP address.	integer	Minimum value: 300 Maximum value: 8640000	2400										
dhcp-option43-insertion	Enable/disable insertion of DHCP option 43.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable insertion of DHCP option 43.</td></tr><tr><td><i>disable</i></td><td>Disable insertion of DHCP option 43.</td></tr></table>				Option	Description	<i>enable</i>	Enable insertion of DHCP option 43.	<i>disable</i>	Disable insertion of DHCP option 43.				
	Option	Description												
	<i>enable</i>	Enable insertion of DHCP option 43.												
<i>disable</i>	Disable insertion of DHCP option 43.													
dhcp-option82-circuit-id-insertion	Enable/disable DHCP option 82 circuit-id insert.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>style-1</i></td><td>ASCII string composed of AP-MAC;SSID;SSID-TYPE. For example, "xx:xx:xx:xx:xx:xx;wifi;s".</td></tr><tr><td><i>style-2</i></td><td>ASCII string composed of AP-MAC. For example, "xx:xx:xx:xx:xx:xx".</td></tr><tr><td><i>style-3</i></td><td>ASCII string composed of NETWORK-TYPE:WTPPROF-NAME:VLAN:SSID:AP-MODEL:AP-HOSTNAME:AP-MAC. For example, "WLAN:FAPS221E-default:100:wifi:PS221E:FortiAP-S221E:xx:xx:xx:xx:xx:xx".</td></tr><tr><td><i>disable</i></td><td>Disable DHCP option 82 circuit-id insert.</td></tr></table>				Option	Description	<i>style-1</i>	ASCII string composed of AP-MAC;SSID;SSID-TYPE. For example, "xx:xx:xx:xx:xx:xx;wifi;s".	<i>style-2</i>	ASCII string composed of AP-MAC. For example, "xx:xx:xx:xx:xx:xx".	<i>style-3</i>	ASCII string composed of NETWORK-TYPE:WTPPROF-NAME:VLAN:SSID:AP-MODEL:AP-HOSTNAME:AP-MAC. For example, "WLAN:FAPS221E-default:100:wifi:PS221E:FortiAP-S221E:xx:xx:xx:xx:xx:xx".	<i>disable</i>	Disable DHCP option 82 circuit-id insert.
	Option	Description												
	<i>style-1</i>	ASCII string composed of AP-MAC;SSID;SSID-TYPE. For example, "xx:xx:xx:xx:xx:xx;wifi;s".												
	<i>style-2</i>	ASCII string composed of AP-MAC. For example, "xx:xx:xx:xx:xx:xx".												
	<i>style-3</i>	ASCII string composed of NETWORK-TYPE:WTPPROF-NAME:VLAN:SSID:AP-MODEL:AP-HOSTNAME:AP-MAC. For example, "WLAN:FAPS221E-default:100:wifi:PS221E:FortiAP-S221E:xx:xx:xx:xx:xx:xx".												
<i>disable</i>	Disable DHCP option 82 circuit-id insert.													

Parameter	Description	Type	Size	Default						
dhcp-option82-insertion	Enable/disable DHCP option 82 insert.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP option 82 insert.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP option 82 insert.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCP option 82 insert.	<i>disable</i>	Disable DHCP option 82 insert.			
Option	Description									
<i>enable</i>	Enable DHCP option 82 insert.									
<i>disable</i>	Disable DHCP option 82 insert.									
dhcp-option82-remote-id-insertion	Enable/disable DHCP option 82 remote-id insert.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>style-1</i></td><td>ASCII string in the format "xx:xx:xx:xx:xx:xx" containing MAC address of client device.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP option 82 remote-id insert.</td></tr></table>	Option	Description	<i>style-1</i>	ASCII string in the format "xx:xx:xx:xx:xx:xx" containing MAC address of client device.	<i>disable</i>	Disable DHCP option 82 remote-id insert.			
Option	Description									
<i>style-1</i>	ASCII string in the format "xx:xx:xx:xx:xx:xx" containing MAC address of client device.									
<i>disable</i>	Disable DHCP option 82 remote-id insert.									
dynamic-vlan	Enable/disable dynamic VLAN assignment.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable dynamic VLAN assignment.</td></tr><tr><td><i>disable</i></td><td>Disable dynamic VLAN assignment.</td></tr></table>	Option	Description	<i>enable</i>	Enable dynamic VLAN assignment.	<i>disable</i>	Disable dynamic VLAN assignment.			
Option	Description									
<i>enable</i>	Enable dynamic VLAN assignment.									
<i>disable</i>	Disable dynamic VLAN assignment.									
eap-reauth	Enable/disable EAP re-authentication for WPA-Enterprise security.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAP re-authentication for WPA-Enterprise security.</td></tr><tr><td><i>disable</i></td><td>Disable EAP re-authentication for WPA-Enterprise security.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAP re-authentication for WPA-Enterprise security.	<i>disable</i>	Disable EAP re-authentication for WPA-Enterprise security.			
Option	Description									
<i>enable</i>	Enable EAP re-authentication for WPA-Enterprise security.									
<i>disable</i>	Disable EAP re-authentication for WPA-Enterprise security.									
eap-reauth-intv	EAP re-authentication interval.	integer	Minimum value: 1800 Maximum value: 864000	86400						
eapol-key-retries	Enable/disable retransmission of EAPOL-Key frames.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).</td></tr><tr><td><i>enable</i></td><td>Enable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).</td></tr></table>	Option	Description	<i>disable</i>	Disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).	<i>enable</i>	Enable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).			
Option	Description									
<i>disable</i>	Disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).									
<i>enable</i>	Enable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).									

Parameter	Description	Type	Size	Default								
encrypt	Encryption protocol to use (only available when security is set to a WPA type).	option	-	AES								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>TKIP</td><td>Use TKIP encryption.</td></tr><tr><td>AES</td><td>Use AES encryption.</td></tr><tr><td>TKIP-AES</td><td>Use TKIP and AES encryption.</td></tr></table>	Option	Description	TKIP	Use TKIP encryption.	AES	Use AES encryption.	TKIP-AES	Use TKIP and AES encryption.			
Option	Description											
TKIP	Use TKIP encryption.											
AES	Use AES encryption.											
TKIP-AES	Use TKIP and AES encryption.											
external-fast-roaming	Enable/disable fast roaming or pre-authentication with external APs not managed by the FortiGate.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable fast roaming or pre-authentication with external APs.</td></tr><tr><td>disable</td><td>Disable fast roaming or pre-authentication with external APs.</td></tr></table>	Option	Description	enable	Enable fast roaming or pre-authentication with external APs.	disable	Disable fast roaming or pre-authentication with external APs.					
Option	Description											
enable	Enable fast roaming or pre-authentication with external APs.											
disable	Disable fast roaming or pre-authentication with external APs.											
external-logout	URL of external authentication logout server.	string	Maximum length: 127									
external-web	URL of external authentication web server.	var-string	Maximum length: 1023									
external-web-format	URL query parameter detection.	option	-	auto-detect								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto-detect</td><td>Automatically detect if "external-web" URL has any query parameter.</td></tr><tr><td>no-query-string</td><td>"external-web" URL does not have any query parameter.</td></tr><tr><td>partial-query-string</td><td>"external-web" URL has some query parameters.</td></tr></table>	Option	Description	auto-detect	Automatically detect if "external-web" URL has any query parameter.	no-query-string	"external-web" URL does not have any query parameter.	partial-query-string	"external-web" URL has some query parameters.			
Option	Description											
auto-detect	Automatically detect if "external-web" URL has any query parameter.											
no-query-string	"external-web" URL does not have any query parameter.											
partial-query-string	"external-web" URL has some query parameters.											
fast-bss-transition	Enable/disable 802.11r Fast BSS Transition.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable 802.11r Fast BSS Transition (FT).</td></tr><tr><td>enable</td><td>Enable 802.11r Fast BSS Transition (FT).</td></tr></table>	Option	Description	disable	Disable 802.11r Fast BSS Transition (FT).	enable	Enable 802.11r Fast BSS Transition (FT).					
Option	Description											
disable	Disable 802.11r Fast BSS Transition (FT).											
enable	Enable 802.11r Fast BSS Transition (FT).											
fast-roaming	Enable/disable fast-roaming, or pre-authentication, where supported by clients.	option	-	enable								

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable fast-roaming, or pre-authentication.</td></tr><tr><td><i>disable</i></td><td>Disable fast-roaming, or pre-authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable fast-roaming, or pre-authentication.	<i>disable</i>	Disable fast-roaming, or pre-authentication.			
	Option	Description								
	<i>enable</i>	Enable fast-roaming, or pre-authentication.								
<i>disable</i>	Disable fast-roaming, or pre-authentication.									
ft-mobility-domain	Mobility domain identifier in FT.	integer	Minimum value: 1 Maximum value: 65535	1000						
ft-over-ds	Enable/disable FT over the Distribution System (DS).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable FT over the Distribution System (DS).</td></tr><tr><td><i>enable</i></td><td>Enable FT over the Distribution System (DS).</td></tr></table>	Option	Description	<i>disable</i>	Disable FT over the Distribution System (DS).	<i>enable</i>	Enable FT over the Distribution System (DS).			
	Option	Description								
	<i>disable</i>	Disable FT over the Distribution System (DS).								
<i>enable</i>	Enable FT over the Distribution System (DS).									
ft-r0-key-lifetime	Lifetime of the PMK-R0 key in FT, 1-65535 minutes.	integer	Minimum value: 1 Maximum value: 65535	480						
gas-comeback-delay	GAS comeback delay.	integer	Minimum value: 100 Maximum value: 10000	500						
gas-fragmentation-limit	GAS fragmentation limit.	integer	Minimum value: 512 Maximum value: 4096	1024						
gtk-rekey	Enable/disable GTK rekey for WPA security.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable GTK rekey for WPA security.</td></tr><tr><td><i>disable</i></td><td>Disable GTK rekey for WPA security.</td></tr></table>	Option	Description	<i>enable</i>	Enable GTK rekey for WPA security.	<i>disable</i>	Disable GTK rekey for WPA security.			
	Option	Description								
	<i>enable</i>	Enable GTK rekey for WPA security.								
<i>disable</i>	Disable GTK rekey for WPA security.									
gtk-rekey-intv	GTK rekey interval.	integer	Minimum value: 1800 Maximum value: 864000	86400						
high-efficiency	Enable/disable 802.11ax high efficiency.	option	-	enable						

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11ax high efficiency.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11ax high efficiency.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11ax high efficiency.	<i>disable</i>	Disable 802.11ax high efficiency.							
	Option	Description												
	<i>enable</i>	Enable 802.11ax high efficiency.												
<i>disable</i>	Disable 802.11ax high efficiency.													
hotspot20-profile	Hotspot 2.0 profile name.	string	Maximum length: 35											
igmp-snooping	Enable/disable IGMP snooping.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IGMP snooping.</td></tr><tr><td><i>disable</i></td><td>Disable IGMP snooping.</td></tr></table>	Option	Description	<i>enable</i>	Enable IGMP snooping.	<i>disable</i>	Disable IGMP snooping.							
	Option	Description												
	<i>enable</i>	Enable IGMP snooping.												
<i>disable</i>	Disable IGMP snooping.													
intra-vap-privacy	Enable/disable blocking communication between clients on the same SSID.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable intra-SSID privacy.</td></tr><tr><td><i>disable</i></td><td>Disable intra-SSID privacy.</td></tr></table>	Option	Description	<i>enable</i>	Enable intra-SSID privacy.	<i>disable</i>	Disable intra-SSID privacy.							
	Option	Description												
	<i>enable</i>	Enable intra-SSID privacy.												
<i>disable</i>	Disable intra-SSID privacy.													
ip	IP address and subnet mask for the local standalone NAT subnet.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0										
ips-sensor	IPS sensor name.	string	Maximum length: 35											
ipv6-rules	Optional rules of IPv6 packets. For example, you can keep RA, RS and so on off of the wireless network.	option	-	drop-icmp6ra drop-icmp6rs drop-llmnr6 drop-icmp6mld2 drop-dhcp6s drop-dhcp6c ndp-proxy drop-ns-dad										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop-icmp6ra</i></td><td>Drop ICMP6 Router Advertisement (RA) packets that originate from wireless clients.</td></tr><tr><td><i>drop-icmp6rs</i></td><td>Drop ICMP6 Router Solicitation (RS) packets to be sent to wireless clients.</td></tr><tr><td><i>drop-llmnr6</i></td><td>Drop Link-Local Multicast Name Resolution (LLMNR) packets</td></tr><tr><td><i>drop-icmp6mld2</i></td><td>Drop ICMP6 Multicast Listener Report V2 (MLD2) packets</td></tr></table>	Option	Description	<i>drop-icmp6ra</i>	Drop ICMP6 Router Advertisement (RA) packets that originate from wireless clients.	<i>drop-icmp6rs</i>	Drop ICMP6 Router Solicitation (RS) packets to be sent to wireless clients.	<i>drop-llmnr6</i>	Drop Link-Local Multicast Name Resolution (LLMNR) packets	<i>drop-icmp6mld2</i>	Drop ICMP6 Multicast Listener Report V2 (MLD2) packets			
	Option	Description												
	<i>drop-icmp6ra</i>	Drop ICMP6 Router Advertisement (RA) packets that originate from wireless clients.												
	<i>drop-icmp6rs</i>	Drop ICMP6 Router Solicitation (RS) packets to be sent to wireless clients.												
	<i>drop-llmnr6</i>	Drop Link-Local Multicast Name Resolution (LLMNR) packets												
<i>drop-icmp6mld2</i>	Drop ICMP6 Multicast Listener Report V2 (MLD2) packets													

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop-dhcp6s</i></td><td>Drop DHCP6 server generated packets that originate from wireless clients.</td></tr><tr><td><i>drop-dhcp6c</i></td><td>Drop DHCP6 client generated packets to be sent to wireless clients.</td></tr><tr><td><i>ndp-proxy</i></td><td>Enable IPv6 ndp proxy - send back na on behalf of the client and drop the ns.</td></tr><tr><td><i>drop-ns-dad</i></td><td>Drop ICMP6 NS-DAD when target address is not found in ndp proxy cache.</td></tr><tr><td><i>drop-ns-nondad</i></td><td>Drop ICMP6 NS-NonDAD when target address is not found in ndp proxy cache.</td></tr></table>	Option	Description	<i>drop-dhcp6s</i>	Drop DHCP6 server generated packets that originate from wireless clients.	<i>drop-dhcp6c</i>	Drop DHCP6 client generated packets to be sent to wireless clients.	<i>ndp-proxy</i>	Enable IPv6 ndp proxy - send back na on behalf of the client and drop the ns.	<i>drop-ns-dad</i>	Drop ICMP6 NS-DAD when target address is not found in ndp proxy cache.	<i>drop-ns-nondad</i>	Drop ICMP6 NS-NonDAD when target address is not found in ndp proxy cache.			
	Option	Description														
	<i>drop-dhcp6s</i>	Drop DHCP6 server generated packets that originate from wireless clients.														
	<i>drop-dhcp6c</i>	Drop DHCP6 client generated packets to be sent to wireless clients.														
	<i>ndp-proxy</i>	Enable IPv6 ndp proxy - send back na on behalf of the client and drop the ns.														
	<i>drop-ns-dad</i>	Drop ICMP6 NS-DAD when target address is not found in ndp proxy cache.														
<i>drop-ns-nondad</i>	Drop ICMP6 NS-NonDAD when target address is not found in ndp proxy cache.															
key	WEP Key.	password	Not Specified													
keyindex	WEP key index.	integer	Minimum value: 1 Maximum value: 4	1												
l3-roaming	Enable/disable layer 3 roaming.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable layer 3 roaming.</td></tr><tr><td><i>disable</i></td><td>Disable layer 3 roaming.</td></tr></table>	Option	Description	<i>enable</i>	Enable layer 3 roaming.	<i>disable</i>	Disable layer 3 roaming.									
	Option	Description														
	<i>enable</i>	Enable layer 3 roaming.														
<i>disable</i>	Disable layer 3 roaming.															
l3-roaming-mode	Select the way that layer 3 roaming traffic is passed.	option	-	direct												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>direct</i></td><td>Layer 3 roaming traffic is passed between home AP and guest AP directly.</td></tr><tr><td><i>indirect</i></td><td>Layer 3 roaming traffic is passed between home AP and guest AP through controllers.</td></tr></table>	Option	Description	<i>direct</i>	Layer 3 roaming traffic is passed between home AP and guest AP directly.	<i>indirect</i>	Layer 3 roaming traffic is passed between home AP and guest AP through controllers.									
	Option	Description														
	<i>direct</i>	Layer 3 roaming traffic is passed between home AP and guest AP directly.														
	<i>indirect</i>	Layer 3 roaming traffic is passed between home AP and guest AP through controllers.														
ldpc	VAP low-density parity-check (LDPC) coding configuration.	option	-	rxtx												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable LDPC.</td></tr><tr><td><i>rx</i></td><td>Enable LDPC when receiving traffic.</td></tr><tr><td><i>tx</i></td><td>Enable LDPC when transmitting traffic.</td></tr><tr><td><i>rxtx</i></td><td>Enable LDPC when both receiving and transmitting traffic.</td></tr></table>	Option	Description	<i>disable</i>	Disable LDPC.	<i>rx</i>	Enable LDPC when receiving traffic.	<i>tx</i>	Enable LDPC when transmitting traffic.	<i>rxtx</i>	Enable LDPC when both receiving and transmitting traffic.					
	Option	Description														
	<i>disable</i>	Disable LDPC.														
	<i>rx</i>	Enable LDPC when receiving traffic.														
	<i>tx</i>	Enable LDPC when transmitting traffic.														
<i>rxtx</i>	Enable LDPC when both receiving and transmitting traffic.															
local-authentication	Enable/disable AP local authentication.	option	-	disable												

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AP local authentication.		
	<i>disable</i>	Disable AP local authentication.		
local-bridging	Enable/disable bridging of wireless and Ethernet interfaces on the FortiAP.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AP local VAP to Ethernet bridging.		
	<i>disable</i>	Disable AP local VAP to Ethernet bridging.		
local-lan	Allow/deny traffic destined for a Class A, B, or C private IP address.	option	-	allow
	<b>Option</b>	<b>Description</b>		
	<i>allow</i>	Allow traffic destined for a Class A, B, or C private IP address.		
	<i>deny</i>	Deny traffic destined for a Class A, B, or C private IP address.		
local-standalone	Enable/disable AP local standalone.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AP local standalone.		
	<i>disable</i>	Disable AP local standalone.		
local-standalone-dns	Enable/disable AP local standalone DNS.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AP local standalone DNS.		
	<i>disable</i>	Disable AP local standalone DNS.		
local-standalone-dns-ip	IPv4 addresses for the local standalone DNS.	ipv4-address	Not Specified	
local-standalone-nat	Enable/disable AP local standalone NAT mode.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AP local standalone NAT mode.		
	<i>disable</i>	Disable AP local standalone NAT mode.		

Parameter	Description	Type	Size	Default										
mac-auth-bypass	Enable/disable MAC authentication bypass.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable MAC authentication bypass.</td></tr><tr><td><i>disable</i></td><td>Disable MAC authentication bypass.</td></tr></table>	Option	Description	<i>enable</i>	Enable MAC authentication bypass.	<i>disable</i>	Disable MAC authentication bypass.							
Option	Description													
<i>enable</i>	Enable MAC authentication bypass.													
<i>disable</i>	Disable MAC authentication bypass.													
mac-called-station-delimiter	MAC called station delimiter.	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hyphen</i></td><td>Use hyphen as delimiter for called station.</td></tr><tr><td><i>single-hyphen</i></td><td>Use single hyphen as delimiter for called station.</td></tr><tr><td><i>colon</i></td><td>Use colon as delimiter for called station.</td></tr><tr><td><i>none</i></td><td>No delimiter for called station.</td></tr></table>	Option	Description	<i>hyphen</i>	Use hyphen as delimiter for called station.	<i>single-hyphen</i>	Use single hyphen as delimiter for called station.	<i>colon</i>	Use colon as delimiter for called station.	<i>none</i>	No delimiter for called station.			
Option	Description													
<i>hyphen</i>	Use hyphen as delimiter for called station.													
<i>single-hyphen</i>	Use single hyphen as delimiter for called station.													
<i>colon</i>	Use colon as delimiter for called station.													
<i>none</i>	No delimiter for called station.													
mac-calling-station-delimiter	MAC calling station delimiter.	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hyphen</i></td><td>Use hyphen as delimiter for calling station.</td></tr><tr><td><i>single-hyphen</i></td><td>Use single hyphen as delimiter for calling station.</td></tr><tr><td><i>colon</i></td><td>Use colon as delimiter for calling station.</td></tr><tr><td><i>none</i></td><td>No delimiter for calling station.</td></tr></table>	Option	Description	<i>hyphen</i>	Use hyphen as delimiter for calling station.	<i>single-hyphen</i>	Use single hyphen as delimiter for calling station.	<i>colon</i>	Use colon as delimiter for calling station.	<i>none</i>	No delimiter for calling station.			
Option	Description													
<i>hyphen</i>	Use hyphen as delimiter for calling station.													
<i>single-hyphen</i>	Use single hyphen as delimiter for calling station.													
<i>colon</i>	Use colon as delimiter for calling station.													
<i>none</i>	No delimiter for calling station.													
mac-case	MAC case.	option	-	uppercase										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>uppercase</i></td><td>Use uppercase MAC.</td></tr><tr><td><i>lowercase</i></td><td>Use lowercase MAC.</td></tr></table>	Option	Description	<i>uppercase</i>	Use uppercase MAC.	<i>lowercase</i>	Use lowercase MAC.							
Option	Description													
<i>uppercase</i>	Use uppercase MAC.													
<i>lowercase</i>	Use lowercase MAC.													
mac-filter	Enable/disable MAC filtering to block wireless clients by mac address.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable MAC filtering.</td></tr><tr><td><i>disable</i></td><td>Disable MAC filtering.</td></tr></table>	Option	Description	<i>enable</i>	Enable MAC filtering.	<i>disable</i>	Disable MAC filtering.							
Option	Description													
<i>enable</i>	Enable MAC filtering.													
<i>disable</i>	Disable MAC filtering.													
mac-filter-policy-other	Allow or block clients with MAC addresses that are not in the filter list.	option	-	allow										

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow clients with MAC addresses that are not in the filter list.</td></tr><tr><td><i>deny</i></td><td>Block clients with MAC addresses that are not in the filter list.</td></tr></table>	Option	Description	<i>allow</i>	Allow clients with MAC addresses that are not in the filter list.	<i>deny</i>	Block clients with MAC addresses that are not in the filter list.							
	Option	Description												
	<i>allow</i>	Allow clients with MAC addresses that are not in the filter list.												
<i>deny</i>	Block clients with MAC addresses that are not in the filter list.													
mac-password-delimiter	MAC authentication password delimiter.	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hyphen</i></td><td>Use hyphen as delimiter for MAC auth password.</td></tr><tr><td><i>single-hyphen</i></td><td>Use single hyphen as delimiter for MAC auth password.</td></tr><tr><td><i>colon</i></td><td>Use colon as delimiter for MAC auth password.</td></tr><tr><td><i>none</i></td><td>No delimiter for MAC auth password.</td></tr></table>	Option	Description	<i>hyphen</i>	Use hyphen as delimiter for MAC auth password.	<i>single-hyphen</i>	Use single hyphen as delimiter for MAC auth password.	<i>colon</i>	Use colon as delimiter for MAC auth password.	<i>none</i>	No delimiter for MAC auth password.			
	Option	Description												
	<i>hyphen</i>	Use hyphen as delimiter for MAC auth password.												
	<i>single-hyphen</i>	Use single hyphen as delimiter for MAC auth password.												
	<i>colon</i>	Use colon as delimiter for MAC auth password.												
<i>none</i>	No delimiter for MAC auth password.													
mac-username-delimiter	MAC authentication username delimiter.	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hyphen</i></td><td>Use hyphen as delimiter for MAC auth username.</td></tr><tr><td><i>single-hyphen</i></td><td>Use single hyphen as delimiter for MAC auth username.</td></tr><tr><td><i>colon</i></td><td>Use colon as delimiter for MAC auth username.</td></tr><tr><td><i>none</i></td><td>No delimiter for MAC auth username.</td></tr></table>	Option	Description	<i>hyphen</i>	Use hyphen as delimiter for MAC auth username.	<i>single-hyphen</i>	Use single hyphen as delimiter for MAC auth username.	<i>colon</i>	Use colon as delimiter for MAC auth username.	<i>none</i>	No delimiter for MAC auth username.			
	Option	Description												
	<i>hyphen</i>	Use hyphen as delimiter for MAC auth username.												
	<i>single-hyphen</i>	Use single hyphen as delimiter for MAC auth username.												
	<i>colon</i>	Use colon as delimiter for MAC auth username.												
<i>none</i>	No delimiter for MAC auth username.													
max-clients	Maximum number of clients that can connect simultaneously to the VAP.	integer	Minimum value: 0 Maximum value: 4294967295	0										
max-clients-ap	Maximum number of clients that can connect simultaneously to the VAP per AP radio.	integer	Minimum value: 0 Maximum value: 4294967295	0										
mbo	Enable/disable Multiband Operation.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Multiband Operation (MBO).</td></tr><tr><td><i>enable</i></td><td>Enable Multiband Operation (MBO).</td></tr></table>	Option	Description	<i>disable</i>	Disable Multiband Operation (MBO).	<i>enable</i>	Enable Multiband Operation (MBO).							
	Option	Description												
	<i>disable</i>	Disable Multiband Operation (MBO).												
<i>enable</i>	Enable Multiband Operation (MBO).													

Parameter	Description	Type	Size	Default								
mbo-cell-data-conn-pref	MBO cell data connection preference.	option	-	prefer-not								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>excluded</i></td><td>Wi-Fi Agile Multiband AP does not want the Wi-Fi Agile Multiband STA to use the cellular data connection.</td></tr><tr><td><i>prefer-not</i></td><td>Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should not use cellular data connection.</td></tr><tr><td><i>prefer-use</i></td><td>Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should use cellular data connection.</td></tr></table>				Option	Description	<i>excluded</i>	Wi-Fi Agile Multiband AP does not want the Wi-Fi Agile Multiband STA to use the cellular data connection.	<i>prefer-not</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should not use cellular data connection.	<i>prefer-use</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should use cellular data connection.
	Option	Description										
	<i>excluded</i>	Wi-Fi Agile Multiband AP does not want the Wi-Fi Agile Multiband STA to use the cellular data connection.										
	<i>prefer-not</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should not use cellular data connection.										
<i>prefer-use</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should use cellular data connection.											
me-disable-thresh	Disable multicast enhancement when this many clients are receiving multicast traffic.	integer	Minimum value: 2 Maximum value: 256	32								
mesh-backhaul	Enable/disable using this VAP as a WiFi mesh backhaul. This entry is only available when security is set to a WPA type or open.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mesh backhaul.</td></tr><tr><td><i>disable</i></td><td>Disable mesh backhaul.</td></tr></table>				Option	Description	<i>enable</i>	Enable mesh backhaul.	<i>disable</i>	Disable mesh backhaul.		
	Option	Description										
	<i>enable</i>	Enable mesh backhaul.										
<i>disable</i>	Disable mesh backhaul.											
mpsk-profile	MPSK profile name.	string	Maximum length: 35									
mu-mimo	Enable/disable Multi-user MIMO.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Multi-user MIMO.</td></tr><tr><td><i>disable</i></td><td>Disable Multi-user MIMO.</td></tr></table>				Option	Description	<i>enable</i>	Enable Multi-user MIMO.	<i>disable</i>	Disable Multi-user MIMO.		
	Option	Description										
	<i>enable</i>	Enable Multi-user MIMO.										
<i>disable</i>	Disable Multi-user MIMO.											
multicast-enhance	Enable/disable converting multicast to unicast to improve performance.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable multicast enhancement.</td></tr><tr><td><i>disable</i></td><td>Disable multicast enhancement.</td></tr></table>				Option	Description	<i>enable</i>	Enable multicast enhancement.	<i>disable</i>	Disable multicast enhancement.		
	Option	Description										
	<i>enable</i>	Enable multicast enhancement.										
<i>disable</i>	Disable multicast enhancement.											
multicast-rate	Multicast rate.	option	-	0								

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>0</td><td>Use the default multicast rate.</td></tr><tr><td>6000</td><td>6 Mbps.</td></tr><tr><td>12000</td><td>12 Mbps.</td></tr><tr><td>24000</td><td>24 Mbps.</td></tr></table>	Option	Description	0	Use the default multicast rate.	6000	6 Mbps.	12000	12 Mbps.	24000	24 Mbps.			
	Option	Description												
	0	Use the default multicast rate.												
	6000	6 Mbps.												
	12000	12 Mbps.												
24000	24 Mbps.													
mac	Enable/disable network access control.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable network access control.</td></tr><tr><td>disable</td><td>Disable network access control.</td></tr></table>	Option	Description	enable	Enable network access control.	disable	Disable network access control.							
	Option	Description												
	enable	Enable network access control.												
disable	Disable network access control.													
mac-profile	NAC profile name.	string	Maximum length: 35											
name	Virtual AP name.	string	Maximum length: 15											
neighbor-report-dual-band	Enable/disable dual-band neighbor report.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable dual-band neighbor report.</td></tr><tr><td>enable</td><td>Enable dual-band neighbor report.</td></tr></table>	Option	Description	disable	Disable dual-band neighbor report.	enable	Enable dual-band neighbor report.							
	Option	Description												
	disable	Disable dual-band neighbor report.												
enable	Enable dual-band neighbor report.													
okc	Enable/disable Opportunistic Key Caching.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable Opportunistic Key Caching (OKC).</td></tr><tr><td>enable</td><td>Enable Opportunistic Key Caching (OKC).</td></tr></table>	Option	Description	disable	Disable Opportunistic Key Caching (OKC).	enable	Enable Opportunistic Key Caching (OKC).							
	Option	Description												
	disable	Disable Opportunistic Key Caching (OKC).												
enable	Enable Opportunistic Key Caching (OKC).													
osen	Enable/disable OSEN as part of key management.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable OSEN auth.</td></tr><tr><td>disable</td><td>Disable OSEN auth.</td></tr></table>	Option	Description	enable	Enable OSEN auth.	disable	Disable OSEN auth.							
	Option	Description												
	enable	Enable OSEN auth.												
disable	Disable OSEN auth.													
owe-groups	OWE-Groups.	option	-											

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>19</td><td>DH Group 19.</td></tr><tr><td>20</td><td>DH Group 20.</td></tr><tr><td>21</td><td>DH Group 21.</td></tr></table>	Option	Description	19	DH Group 19.	20	DH Group 20.	21	DH Group 21.			
	Option	Description										
	19	DH Group 19.										
	20	DH Group 20.										
21	DH Group 21.											
owe-transition	Enable/disable OWE transition mode support.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable OWE transition mode support.</td></tr><tr><td>enable</td><td>Enable OWE transition mode support.</td></tr></table>	Option	Description	disable	Disable OWE transition mode support.	enable	Enable OWE transition mode support.					
	Option	Description										
	disable	Disable OWE transition mode support.										
enable	Enable OWE transition mode support.											
owe-transition-ssid	OWE transition mode peer SSID.	string	Maximum length: 32									
passphrase	WPA pre-shared key (PSK) to be used to authenticate WiFi users.	password	Not Specified									
pmf	Protected Management Frames.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable PMF completely.</td></tr><tr><td>enable</td><td>Enable PMF but deny clients without PMF.</td></tr><tr><td>optional</td><td>Enable PMF and allow clients without PMF.</td></tr></table>	Option	Description	disable	Disable PMF completely.	enable	Enable PMF but deny clients without PMF.	optional	Enable PMF and allow clients without PMF.			
	Option	Description										
	disable	Disable PMF completely.										
	enable	Enable PMF but deny clients without PMF.										
optional	Enable PMF and allow clients without PMF.											
pmf-assoc-comeback-timeout	Protected Management Frames.	integer	Minimum value: 1 Maximum value: 20	1								
pmf-sa-query-retry-timeout	Protected Management Frames.	integer	Minimum value: 1 Maximum value: 5	2								
port-macauth	Enable/disable LAN port MAC authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable LAN port MAC authentication.</td></tr><tr><td>radius</td><td>Enable LAN port RADIUS-based MAC authentication.</td></tr><tr><td>address-group</td><td>Enable LAN port address-group based MAC authentication.</td></tr></table>	Option	Description	disable	Disable LAN port MAC authentication.	radius	Enable LAN port RADIUS-based MAC authentication.	address-group	Enable LAN port address-group based MAC authentication.			
	Option	Description										
	disable	Disable LAN port MAC authentication.										
	radius	Enable LAN port RADIUS-based MAC authentication.										
address-group	Enable LAN port address-group based MAC authentication.											

Parameter	Description	Type	Size	Default																				
port-macauth-reauth-timeout	LAN port MAC authentication re-authentication timeout value.	integer	Minimum value: 120 Maximum value: 65535	7200																				
port-macauth-timeout	LAN port MAC authentication idle timeout value.	integer	Minimum value: 60 Maximum value: 65535	600																				
portal-message-override-group	Replacement message group for this VAP (only available when security is set to a captive portal type).	string	Maximum length: 35																					
portal-type	Captive portal functionality. Configure how the captive portal authenticates users and whether it includes a disclaimer.	option	-	auth																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auth</td><td>Portal for authentication.</td></tr><tr><td>auth+disclaimer</td><td>Portal for authentication and disclaimer.</td></tr><tr><td>disclaimer</td><td>Portal for disclaimer.</td></tr><tr><td>email-collect</td><td>Portal for email collection.</td></tr><tr><td>cmcc</td><td>Portal for CMCC.</td></tr><tr><td>cmcc-macauth</td><td>Portal for CMCC and MAC authentication.</td></tr><tr><td>auth-mac</td><td>Portal for authentication and MAC authentication.</td></tr><tr><td>external-auth</td><td>Portal for external portal authentication.</td></tr><tr><td>external-macauth</td><td>Portal for external portal MAC authentication.</td></tr></table>				Option	Description	auth	Portal for authentication.	auth+disclaimer	Portal for authentication and disclaimer.	disclaimer	Portal for disclaimer.	email-collect	Portal for email collection.	cmcc	Portal for CMCC.	cmcc-macauth	Portal for CMCC and MAC authentication.	auth-mac	Portal for authentication and MAC authentication.	external-auth	Portal for external portal authentication.	external-macauth	Portal for external portal MAC authentication.
Option	Description																							
auth	Portal for authentication.																							
auth+disclaimer	Portal for authentication and disclaimer.																							
disclaimer	Portal for disclaimer.																							
email-collect	Portal for email collection.																							
cmcc	Portal for CMCC.																							
cmcc-macauth	Portal for CMCC and MAC authentication.																							
auth-mac	Portal for authentication and MAC authentication.																							
external-auth	Portal for external portal authentication.																							
external-macauth	Portal for external portal MAC authentication.																							
primary-wag-profile	Primary wireless access gateway profile name.	string	Maximum length: 35																					
probe-resp-suppression	Enable/disable probe response suppression.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable probe response suppression.</td></tr><tr><td>disable</td><td>Disable probe response suppression.</td></tr></table>				Option	Description	enable	Enable probe response suppression.	disable	Disable probe response suppression.														
Option	Description																							
enable	Enable probe response suppression.																							
disable	Disable probe response suppression.																							
probe-resp-threshold	Minimum signal level/threshold in dBm required for the AP response to probe requests.	string	Maximum length: 7	-80																				

Parameter	Description	Type	Size	Default						
ptk-rekey	Enable/disable PTK rekey for WPA-Enterprise security.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable PTK rekey for WPA-Enterprise security.</td></tr><tr><td><i>disable</i></td><td>Disable PTK rekey for WPA-Enterprise security.</td></tr></table>	Option	Description	<i>enable</i>	Enable PTK rekey for WPA-Enterprise security.	<i>disable</i>	Disable PTK rekey for WPA-Enterprise security.			
Option	Description									
<i>enable</i>	Enable PTK rekey for WPA-Enterprise security.									
<i>disable</i>	Disable PTK rekey for WPA-Enterprise security.									
ptk-rekey-intv	PTK rekey interval.	integer	Minimum value: 1800 Maximum value: 864000	86400						
qos-profile	Quality of service profile name.	string	Maximum length: 35							
quarantine	Enable/disable station quarantine.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable station quarantine.</td></tr><tr><td><i>disable</i></td><td>Disable station quarantine.</td></tr></table>	Option	Description	<i>enable</i>	Enable station quarantine.	<i>disable</i>	Disable station quarantine.			
Option	Description									
<i>enable</i>	Enable station quarantine.									
<i>disable</i>	Disable station quarantine.									
radio-2g-threshold	Minimum signal level/threshold in dBm required for the AP response to receive a packet in 2.4G band.	string	Maximum length: 7	-79						
radio-5g-threshold	Minimum signal level/threshold in dBm required for the AP response to receive a packet in 5G band.	string	Maximum length: 7	-76						
radio-sensitivity	Enable/disable software radio sensitivity.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable software radio sensitivity.</td></tr><tr><td><i>disable</i></td><td>Disable software radio sensitivity.</td></tr></table>	Option	Description	<i>enable</i>	Enable software radio sensitivity.	<i>disable</i>	Disable software radio sensitivity.			
Option	Description									
<i>enable</i>	Enable software radio sensitivity.									
<i>disable</i>	Disable software radio sensitivity.									
radius-mac-auth	Enable/disable RADIUS-based MAC authentication of clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS-based MAC authentication.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS-based MAC authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable RADIUS-based MAC authentication.	<i>disable</i>	Disable RADIUS-based MAC authentication.			
Option	Description									
<i>enable</i>	Enable RADIUS-based MAC authentication.									
<i>disable</i>	Disable RADIUS-based MAC authentication.									

Parameter	Description	Type	Size	Default																								
radius-mac-auth-block-interval	Don't send RADIUS MAC auth request again if the client has been rejected within specific interval.	integer	Minimum value: 30 Maximum value: 864000	0																								
radius-mac-auth-server	RADIUS-based MAC authentication server.	string	Maximum length: 35																									
radius-mac-auth-usergroups <name>	Selective user groups that are permitted for RADIUS mac authentication. User group name.	string	Maximum length: 79																									
radius-mac-mpsk-auth	Enable/disable RADIUS-based MAC authentication of clients for MPSK authentication.	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS-based MAC authentication for MPSK authentication.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS-based MAC authentication for MPSK authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable RADIUS-based MAC authentication for MPSK authentication.	<i>disable</i>	Disable RADIUS-based MAC authentication for MPSK authentication.																		
Option	Description																											
<i>enable</i>	Enable RADIUS-based MAC authentication for MPSK authentication.																											
<i>disable</i>	Disable RADIUS-based MAC authentication for MPSK authentication.																											
radius-mac-mpsk-timeout	RADIUS MAC MPSK cache timeout interval.	integer	Minimum value: 300 Maximum value: 864000	86400																								
radius-server	RADIUS server to be used to authenticate WiFi users.	string	Maximum length: 35																									
rates-11a	Allowed data rates for 802.11a.	option	-																									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>1</i></td><td>1 Mbps supported rate.</td></tr><tr><td><i>1-basic</i></td><td>1 Mbps BSS basic rate.</td></tr><tr><td><i>2</i></td><td>2 Mbps supported rate.</td></tr><tr><td><i>2-basic</i></td><td>2 Mbps BSS basic rate.</td></tr><tr><td><i>5.5</i></td><td>5.5 Mbps supported rate.</td></tr><tr><td><i>5.5-basic</i></td><td>5.5 Mbps BSS basic rate.</td></tr><tr><td><i>11</i></td><td>11 Mbps supported rate.</td></tr><tr><td><i>11-basic</i></td><td>11 Mbps BSS basic rate.</td></tr><tr><td><i>6</i></td><td>6 Mbps supported rate.</td></tr><tr><td><i>6-basic</i></td><td>6 Mbps BSS basic rate.</td></tr><tr><td><i>9</i></td><td>9 Mbps supported rate.</td></tr></table>				Option	Description	<i>1</i>	1 Mbps supported rate.	<i>1-basic</i>	1 Mbps BSS basic rate.	<i>2</i>	2 Mbps supported rate.	<i>2-basic</i>	2 Mbps BSS basic rate.	<i>5.5</i>	5.5 Mbps supported rate.	<i>5.5-basic</i>	5.5 Mbps BSS basic rate.	<i>11</i>	11 Mbps supported rate.	<i>11-basic</i>	11 Mbps BSS basic rate.	<i>6</i>	6 Mbps supported rate.	<i>6-basic</i>	6 Mbps BSS basic rate.	<i>9</i>	9 Mbps supported rate.
Option	Description																											
<i>1</i>	1 Mbps supported rate.																											
<i>1-basic</i>	1 Mbps BSS basic rate.																											
<i>2</i>	2 Mbps supported rate.																											
<i>2-basic</i>	2 Mbps BSS basic rate.																											
<i>5.5</i>	5.5 Mbps supported rate.																											
<i>5.5-basic</i>	5.5 Mbps BSS basic rate.																											
<i>11</i>	11 Mbps supported rate.																											
<i>11-basic</i>	11 Mbps BSS basic rate.

security-exempt-list	Optional security exempt list for captive portal authentication.	string	Maximum length: 35																																					
security-redirect-url	Optional URL for redirecting users after they pass captive portal authentication.	var-string	Maximum length: 1023																																					
selected-usergroups <name>	Selective user groups that are permitted to authenticate. User group name.	string	Maximum length: 79																																					

Parameter	Description	Type	Size	Default						
split-tunneling	Enable/disable split tunneling.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable split tunneling.</td></tr><tr><td><i>disable</i></td><td>Disable split tunneling.</td></tr></table>	Option	Description	<i>enable</i>	Enable split tunneling.	<i>disable</i>	Disable split tunneling.			
	Option	Description								
	<i>enable</i>	Enable split tunneling.								
<i>disable</i>	Disable split tunneling.									
ssid	IEEE 802.11 service set identifier (SSID) for the wireless interface. Users who wish to use the wireless network must configure their computers to access this SSID name.	string	Maximum length: 32	fortinet						
sticky-client-remove	Enable/disable sticky client remove to maintain good signal level clients in SSID.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sticky client remove.</td></tr><tr><td><i>disable</i></td><td>Disable sticky client remove.</td></tr></table>	Option	Description	<i>enable</i>	Enable sticky client remove.	<i>disable</i>	Disable sticky client remove.			
	Option	Description								
	<i>enable</i>	Enable sticky client remove.								
<i>disable</i>	Disable sticky client remove.									
sticky-client-threshold-2g	Minimum signal level/threshold in dBm required for the 2G client to be serviced by the AP.	string	Maximum length: 7	-79						
sticky-client-threshold-5g	Minimum signal level/threshold in dBm required for the 5G client to be serviced by the AP.	string	Maximum length: 7	-76						
sticky-client-threshold-6g	Minimum signal level/threshold in dBm required for the 6G client to be serviced by the AP.	string	Maximum length: 7	-76						
target-wake-time	Enable/disable 802.11ax target wake time.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11ax target wake time.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11ax target wake time.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11ax target wake time.	<i>disable</i>	Disable 802.11ax target wake time.			
	Option	Description								
	<i>enable</i>	Enable 802.11ax target wake time.								
<i>disable</i>	Disable 802.11ax target wake time.									
tkip-counter-measure	Enable/disable TKIP counter measure.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable TKIP counter measure.</td></tr><tr><td><i>disable</i></td><td>Disable TKIP counter measure.</td></tr></table>	Option	Description	<i>enable</i>	Enable TKIP counter measure.	<i>disable</i>	Disable TKIP counter measure.			
	Option	Description								
	<i>enable</i>	Enable TKIP counter measure.								
<i>disable</i>	Disable TKIP counter measure.									

Parameter	Description	Type	Size	Default						
tunnel-echo-interval	The time interval to send echo to both primary and secondary tunnel peers.	integer	Minimum value: 1 Maximum value: 65535	300						
tunnel-fallback-interval	The time interval for secondary tunnel to fall back to primary tunnel.	integer	Minimum value: 0 Maximum value: 65535	7200						
usergroup <name>	Firewall user group to be used to authenticate WiFi users. User group name.	string	Maximum length: 79							
utm-log	Enable/disable UTM logging.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable UTM logging.</td></tr><tr><td>disable</td><td>Disable UTM logging.</td></tr></table>				Option	Description	enable	Enable UTM logging.	disable	Disable UTM logging.
Option	Description									
enable	Enable UTM logging.									
disable	Disable UTM logging.									
utm-profile	UTM profile name.	string	Maximum length: 35							
utm-status	Enable to add one or more security profiles (AV, IPS, etc.) to the VAP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
vlan-auto	Enable/disable automatic management of SSID VLAN interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable automatic management of SSID VLAN interface.</td></tr><tr><td>disable</td><td>Disable automatic management of SSID VLAN interface.</td></tr></table>				Option	Description	enable	Enable automatic management of SSID VLAN interface.	disable	Disable automatic management of SSID VLAN interface.
Option	Description									
enable	Enable automatic management of SSID VLAN interface.									
disable	Disable automatic management of SSID VLAN interface.									
vlan-pooling	Enable/disable VLAN pooling, to allow grouping of multiple wireless controller VLANs into VLAN pools. When set to wtp-group, VLAN pooling occurs with VLAN assignment by wtp-group.	option	-	disable						

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>wtp-group</i></td><td>Enable VLAN pooling with VLAN assignment by wtp-group.</td></tr><tr><td><i>round-robin</i></td><td>Enable VLAN pooling with round-robin VLAN assignment.</td></tr><tr><td><i>hash</i></td><td>Enable VLAN pooling with hash-based VLAN assignment.</td></tr><tr><td><i>disable</i></td><td>Disable VLAN pooling.</td></tr></table>	Option	Description	<i>wtp-group</i>	Enable VLAN pooling with VLAN assignment by wtp-group.	<i>round-robin</i>	Enable VLAN pooling with round-robin VLAN assignment.	<i>hash</i>	Enable VLAN pooling with hash-based VLAN assignment.	<i>disable</i>	Disable VLAN pooling.			
	Option	Description												
	<i>wtp-group</i>	Enable VLAN pooling with VLAN assignment by wtp-group.												
	<i>round-robin</i>	Enable VLAN pooling with round-robin VLAN assignment.												
	<i>hash</i>	Enable VLAN pooling with hash-based VLAN assignment.												
<i>disable</i>	Disable VLAN pooling.													
vlanid	Optional VLAN ID.	integer	Minimum value: 0 Maximum value: 4094	0										
voice-enterprise	Enable/disable 802.11k and 802.11v assisted Voice-Enterprise roaming.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable 802.11k and 802.11v assisted Voice-Enterprise roaming.</td></tr><tr><td><i>enable</i></td><td>Enable 802.11k and 802.11v assisted Voice-Enterprise roaming.</td></tr></table>	Option	Description	<i>disable</i>	Disable 802.11k and 802.11v assisted Voice-Enterprise roaming.	<i>enable</i>	Enable 802.11k and 802.11v assisted Voice-Enterprise roaming.							
	Option	Description												
	<i>disable</i>	Disable 802.11k and 802.11v assisted Voice-Enterprise roaming.												
<i>enable</i>	Enable 802.11k and 802.11v assisted Voice-Enterprise roaming.													
webfilter-profile	WebFilter profile name.	string	Maximum length: 35											

### config mac-filter-list

Parameter	Description	Type	Size	Default						
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00						
mac-filter-policy	Deny or allow the client with this MAC address.	option	-	deny						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow the client with this MAC address.</td></tr><tr><td><i>deny</i></td><td>Block the client with this MAC address.</td></tr></table>				Option	Description	<i>allow</i>	Allow the client with this MAC address.	<i>deny</i>	Block the client with this MAC address.
Option	Description									
<i>allow</i>	Allow the client with this MAC address.									
<i>deny</i>	Block the client with this MAC address.									

## config portal-message-overrides

Parameter	Description	Type	Size	Default
auth-disclaimer-page	Override auth-disclaimer-page message with message from portal-message-overrides group.	string	Maximum length: 35	
auth-reject-page	Override auth-reject-page message with message from portal-message-overrides group.	string	Maximum length: 35	
auth-login-page	Override auth-login-page message with message from portal-message-overrides group.	string	Maximum length: 35	
auth-login-failed-page	Override auth-login-failed-page message with message from portal-message-overrides group.	string	Maximum length: 35	

## config vlan-name

Parameter	Description	Type	Size	Default
name	VLAN name.	string	Maximum length: 35	
vlan-id	VLAN ID.	integer	Minimum value: 0 Maximum value: 4094	0

## config vlan-pool

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4094	0
wtp-group	WTP group name.	string	Maximum length: 35	

## config wireless-controller wag-profile

Configure wireless access gateway (WAG) profiles used for tunnels on AP.

```
config wireless-controller wag-profile
  Description: Configure wireless access gateway (WAG) profiles used for tunnels on AP.
  edit <name>
    set comment {var-string}
    set dhcp-ip-addr {ipv4-address}
    set ping-interval {integer}
    set ping-number {integer}
```

```

        set return-packet-timeout {integer}
        set tunnel-type [l2tpv3|gre]
        set wag-ip {ipv4-address}
        set wag-port {integer}
    next
end

```

## config wireless-controller wag-profile

Parameter	Description	Type	Size	Default						
comment	Comment.	var-string	Maximum length: 255							
dhcp-ip-addr	IP address of the monitoring DHCP request packet sent through the tunnel.	ipv4-address	Not Specified	0.0.0.0						
name	Tunnel profile name.	string	Maximum length: 35							
ping-interval	Interval between two tunnel monitoring echo packets.	integer	Minimum value: 1 Maximum value: 65535	1						
ping-number	Number of the tunnel monitoring echo packets.	integer	Minimum value: 1 Maximum value: 65535	5						
return-packet-timeout	Window of time for the return packets from the tunnel's remote end.	integer	Minimum value: 1 Maximum value: 65535	160						
tunnel-type	Tunnel type.	option	-	l2tpv3						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>l2tpv3</i></td><td>L2TPV3 Ethernet Pseudowire.</td></tr><tr><td><i>gre</i></td><td>GRE Ethernet tunnel.</td></tr></table>				Option	Description	<i>l2tpv3</i>	L2TPV3 Ethernet Pseudowire.	<i>gre</i>	GRE Ethernet tunnel.
Option	Description									
<i>l2tpv3</i>	L2TPV3 Ethernet Pseudowire.									
<i>gre</i>	GRE Ethernet tunnel.									
wag-ip	IP Address of the wireless access gateway.	ipv4-address	Not Specified	0.0.0.0						
wag-port	UDP port of the wireless access gateway.	integer	Minimum value: 0 Maximum value: 65535	1701						

---

ap-bgscan-period	Period between background scans.	integer	Minimum value: 10 Maximum value: 3600	600
ap-bgscan-report-intv	Period between background scan reports.	integer	Minimum value: 15 Maximum value: 600	30
ap-fgscan-report-intv	Period between foreground scan reports.	integer	Minimum value: 15 Maximum value: 600	15
ap-scan	Enable/disable rogue AP detection.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable rogue AP detection.		
	<i>enable</i>	Enable rogue AP detection.		
ap-scan-passive	Enable/disable passive scanning. Enable means do not send probe request on any channels.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Passive scanning on all channels.		
	<i>disable</i>	Passive scanning only on DFS channels.		
ap-scan-threshold	Minimum signal level/threshold in dBm required for the AP to report detected rogue AP.	string	Maximum length: 7	-90
asleep-attack	Enable/disable asleep attack detection.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable asleep attack detection.		
	<i>disable</i>	Disable asleep attack detection.		
assoc-flood-thresh	The threshold value for association frame flooding.	integer	Minimum value: 1 Maximum value: 100	30
assoc-flood-time	Number of seconds after which a station is considered not connected.	integer	Minimum value: 5 Maximum value: 120	10
assoc-frame-flood	Enable/disable association frame flooding detection.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable association frame flooding detection.		
	<i>disable</i>	Disable association frame flooding detection.		
auth-flood-thresh	The threshold value for authentication frame flooding.	integer	Minimum value: 1 Maximum value: 100	30

Parameter	Description	Type	Size	Default						
auth-flood-time	Number of seconds after which a station is considered not connected.	integer	Minimum value: 5 Maximum value: 120	10						
auth-frame-flood	Enable/disable authentication frame flooding detection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable authentication frame flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable authentication frame flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable authentication frame flooding detection.	<i>disable</i>	Disable authentication frame flooding detection.			
Option	Description									
<i>enable</i>	Enable authentication frame flooding detection.									
<i>disable</i>	Disable authentication frame flooding detection.									
comment	Comment.	string	Maximum length: 63							
deauth-broadcast	Enable/disable broadcasting de-authentication detection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable broadcast de-authentication detection.</td></tr><tr><td><i>disable</i></td><td>Disable broadcast de-authentication detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable broadcast de-authentication detection.	<i>disable</i>	Disable broadcast de-authentication detection.			
Option	Description									
<i>enable</i>	Enable broadcast de-authentication detection.									
<i>disable</i>	Disable broadcast de-authentication detection.									
deauth-unknown-src-thresh	Threshold value per second to deauth unknown src for DoS attack (0: no limit).	integer	Minimum value: 0 Maximum value: 65535	10						
eapol-fail-flood	Enable/disable EAPOL-Failure flooding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAPOL-Failure flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable EAPOL-Failure flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAPOL-Failure flooding detection.	<i>disable</i>	Disable EAPOL-Failure flooding detection.			
Option	Description									
<i>enable</i>	Enable EAPOL-Failure flooding detection.									
<i>disable</i>	Disable EAPOL-Failure flooding detection.									
eapol-fail-intv	The detection interval for EAPOL-Failure flooding.	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-fail-thresh	The threshold value for EAPOL-Failure flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						

Parameter	Description	Type	Size	Default						
eapol-logoff-flood	Enable/disable EAPOL-Logoff flooding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAPOL-Logoff flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable EAPOL-Logoff flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAPOL-Logoff flooding detection.	<i>disable</i>	Disable EAPOL-Logoff flooding detection.			
Option	Description									
<i>enable</i>	Enable EAPOL-Logoff flooding detection.									
<i>disable</i>	Disable EAPOL-Logoff flooding detection.									
eapol-logoff-intv	The detection interval for EAPOL-Logoff flooding.	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-logoff-thresh	The threshold value for EAPOL-Logoff flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-pre-fail-flood	Enable/disable premature EAPOL-Failure flooding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable premature EAPOL-Failure flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable premature EAPOL-Failure flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable premature EAPOL-Failure flooding detection.	<i>disable</i>	Disable premature EAPOL-Failure flooding detection.			
Option	Description									
<i>enable</i>	Enable premature EAPOL-Failure flooding detection.									
<i>disable</i>	Disable premature EAPOL-Failure flooding detection.									
eapol-pre-fail-intv	The detection interval for premature EAPOL-Failure flooding.	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-pre-fail-thresh	The threshold value for premature EAPOL-Failure flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-pre-succ-flood	Enable/disable premature EAPOL-Success flooding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable premature EAPOL-Success flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable premature EAPOL-Success flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable premature EAPOL-Success flooding detection.	<i>disable</i>	Disable premature EAPOL-Success flooding detection.			
Option	Description									
<i>enable</i>	Enable premature EAPOL-Success flooding detection.									
<i>disable</i>	Disable premature EAPOL-Success flooding detection.									
eapol-pre-succ-intv	The detection interval for premature EAPOL-Success flooding.	integer	Minimum value: 1 Maximum value: 3600	1						

Parameter	Description	Type	Size	Default						
eapol-pre-succ-thresh	The threshold value for premature EAPOL-Success flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-start-flood	Enable/disable EAPOL-Start flooding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAPOL-Start flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable EAPOL-Start flooding detection.</td></tr></table>				Option	Description	<i>enable</i>	Enable EAPOL-Start flooding detection.	<i>disable</i>	Disable EAPOL-Start flooding detection.
	Option	Description								
	<i>enable</i>	Enable EAPOL-Start flooding detection.								
<i>disable</i>	Disable EAPOL-Start flooding detection.									
eapol-start-intv	The detection interval for EAPOL-Start flooding.	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-start-thresh	The threshold value for EAPOL-Start flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-succ-flood	Enable/disable EAPOL-Success flooding.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAPOL-Success flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable EAPOL-Success flooding detection.</td></tr></table>				Option	Description	<i>enable</i>	Enable EAPOL-Success flooding detection.	<i>disable</i>	Disable EAPOL-Success flooding detection.
	Option	Description								
	<i>enable</i>	Enable EAPOL-Success flooding detection.								
<i>disable</i>	Disable EAPOL-Success flooding detection.									
eapol-succ-intv	The detection interval for EAPOL-Success flooding.	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-succ-thresh	The threshold value for EAPOL-Success flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
invalid-mac-oui	Enable/disable invalid MAC OUI detection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable invalid MAC OUI detection.</td></tr><tr><td><i>disable</i></td><td>Disable invalid MAC OUI detection.</td></tr></table>				Option	Description	<i>enable</i>	Enable invalid MAC OUI detection.	<i>disable</i>	Disable invalid MAC OUI detection.
	Option	Description								
	<i>enable</i>	Enable invalid MAC OUI detection.								
<i>disable</i>	Disable invalid MAC OUI detection.									

Parameter	Description	Type	Size	Default								
long-duration-attack	Enable/disable long duration attack detection based on user configured threshold.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable long duration attack detection.</td></tr><tr><td><i>disable</i></td><td>Disable long duration attack detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable long duration attack detection.	<i>disable</i>	Disable long duration attack detection.					
Option	Description											
<i>enable</i>	Enable long duration attack detection.											
<i>disable</i>	Disable long duration attack detection.											
long-duration-thresh	Threshold value for long duration attack detection.	integer	Minimum value: 1000 Maximum value: 32767	8200								
name	WIDS profile name.	string	Maximum length: 35									
null-ssid-probe-resp	Enable/disable null SSID probe response detection.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable null SSID probe resp detection.</td></tr><tr><td><i>disable</i></td><td>Disable null SSID probe resp detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable null SSID probe resp detection.	<i>disable</i>	Disable null SSID probe resp detection.					
Option	Description											
<i>enable</i>	Enable null SSID probe resp detection.											
<i>disable</i>	Disable null SSID probe resp detection.											
sensor-mode	Scan nearby WiFi stations.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable the scan.</td></tr><tr><td><i>foreign</i></td><td>Enable the scan and monitor foreign channels. Foreign channels are all other available channels than the current operating channel.</td></tr><tr><td><i>both</i></td><td>Enable the scan and monitor both foreign and home channels. Select this option to monitor all WiFi channels.</td></tr></table>	Option	Description	<i>disable</i>	Disable the scan.	<i>foreign</i>	Enable the scan and monitor foreign channels. Foreign channels are all other available channels than the current operating channel.	<i>both</i>	Enable the scan and monitor both foreign and home channels. Select this option to monitor all WiFi channels.			
Option	Description											
<i>disable</i>	Disable the scan.											
<i>foreign</i>	Enable the scan and monitor foreign channels. Foreign channels are all other available channels than the current operating channel.											
<i>both</i>	Enable the scan and monitor both foreign and home channels. Select this option to monitor all WiFi channels.											
spoofed-deauth	Enable/disable spoofed de-authentication attack detection.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable spoofed de-authentication attack detection.</td></tr><tr><td><i>disable</i></td><td>Disable spoofed de-authentication attack detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable spoofed de-authentication attack detection.	<i>disable</i>	Disable spoofed de-authentication attack detection.					
Option	Description											
<i>enable</i>	Enable spoofed de-authentication attack detection.											
<i>disable</i>	Disable spoofed de-authentication attack detection.											
weak-wep-iv	Enable/disable weak WEP IV.	option	-	disable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable weak WEP IV detection.		
	<i>disable</i>	Disable weak WEP IV detection.		
wireless-bridge	Enable/disable wireless bridge detection.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable wireless bridge detection.		
	<i>disable</i>	Disable wireless bridge detection.		

## config wireless-controller wtp-group

Configure WTP groups.

```
config wireless-controller wtp-group
  Description: Configure WTP groups.
  edit <name>
    set ble-major-id {integer}
    set platform-type [AP-11N|220B|...]
    set wtps <wtp-id1>, <wtp-id2>, ...
  next
end
```

## config wireless-controller wtp-group

Option	Description											
<i>enable</i>	Enable LLDP.											
<i>disable</i>	Disable LLDP.											
login-passwd	Set the managed WTP, FortiAP, or AP's administrator password.	password	Not Specified									
login-passwd-change	Change or reset the administrator password of a managed WTP, FortiAP or AP.	option	-	no								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>yes</i></td><td>Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.</td></tr><tr><td><i>default</i></td><td>Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.</td></tr><tr><td><i>no</i></td><td>Do not change the managed WTP, FortiAP or AP's administrator password.</td></tr></table>	Option	Description	<i>yes</i>	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.	<i>default</i>	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.	<i>no</i>	Do not change the managed WTP, FortiAP or AP's administrator password.			
Option	Description											
<i>yes</i>	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.											
<i>default</i>	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.											
<i>no</i>	Do not change the managed WTP, FortiAP or AP's administrator password.											
max-clients	Maximum number of stations.	integer	Minimum value: 0 Maximum value: 4294967295	0								
name	WTP (or FortiAP or AP) profile name.	string	Maximum length: 35									

Parameter	Description	Type	Size	Default																
poe-mode	Set the WTP, FortiAP, or AP's PoE mode.	option	-	auto																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatically detect the PoE mode.</td></tr><tr><td>8023af</td><td>Use 802.3af PoE mode.</td></tr><tr><td>8023at</td><td>Use 802.3at PoE mode.</td></tr><tr><td>power-adapter</td><td>Use the power adapter to control the PoE mode.</td></tr><tr><td>full</td><td>Use full power mode.</td></tr><tr><td>high</td><td>Use high power mode.</td></tr><tr><td>low</td><td>Use low power mode.</td></tr></table>				Option	Description	auto	Automatically detect the PoE mode.	8023af	Use 802.3af PoE mode.	8023at	Use 802.3at PoE mode.	power-adapter	Use the power adapter to control the PoE mode.	full	Use full power mode.	high	Use high power mode.	low	Use low power mode.
	Option	Description																		
	auto	Automatically detect the PoE mode.																		
	8023af	Use 802.3af PoE mode.																		
	8023at	Use 802.3at PoE mode.																		
	power-adapter	Use the power adapter to control the PoE mode.																		
	full	Use full power mode.																		
	high	Use high power mode.																		
low	Use low power mode.																			
split-tunneling-acl-local-ap-subnet	Enable/disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.</td></tr><tr><td>disable</td><td>Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.</td></tr></table>				Option	Description	enable	Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.	disable	Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.										
	Option	Description																		
	enable	Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.																		
disable	Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.																			
split-tunneling-acl-path	Split tunneling ACL path is local/tunnel.	option	-	local																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tunnel</td><td>Split tunneling ACL list traffic will be tunnel.</td></tr><tr><td>local</td><td>Split tunneling ACL list traffic will be local NATed.</td></tr></table>				Option	Description	tunnel	Split tunneling ACL list traffic will be tunnel.	local	Split tunneling ACL list traffic will be local NATed.										
	Option	Description																		
	tunnel	Split tunneling ACL list traffic will be tunnel.																		
local	Split tunneling ACL list traffic will be local NATed.																			
syslog-profile	System log server configuration profile name.	string	Maximum length: 35																	
tun-mtu-downlink	The MTU of downlink CAPWAP tunnel.	integer	Minimum value: 576 Maximum value: 1500	0																
tun-mtu-uplink	The maximum transmission unit.	integer	Minimum value: 576 Maximum value: 1500	0																
wan-port-auth	Set WAN port authentication mode.	option	-	none																

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	Disable WAN port authentication.		
	<i>802.1x</i>	Enable WAN port 802.1x authentication.		
wan-port-auth-methods	WAN port 802.1x supplicant EAP methods.	option	-	all
	<b>Option</b>	<b>Description</b>		
	<i>all</i>	Do not specify any EAP methods.		
	<i>EAP-FAST</i>	Enable EAP-FAST.		
	<i>EAP-TLS</i>	Enable EAP-TLS.		
	<i>EAP-PEAP</i>	Enable EAP-PEAP.		
wan-port-auth-password	Set WAN port 802.1x supplicant password.	password	Not Specified	
wan-port-auth-username	Set WAN port 802.1x supplicant user name.	string	Maximum length: 63	
wan-port-mode	Enable/disable using a WAN port as a LAN port.	option	-	wan-only
	<b>Option</b>	<b>Description</b>		
	<i>wan-lan</i>	Enable using a WAN port as a LAN port.		
	<i>wan-only</i>	Disable using a WAN port as a LAN port.		

### config deny-mac-list

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
mac	A WiFi device with this MAC address is denied access to this WTP, FortiAP or AP.	mac-address	Not Specified	00:00:00:00:00:00

mode	Configure operation mode of 5G radios.	option	-	single-5G
	<b>Option</b>	<b>Description</b>		
	single-5G	Configure radios as one 5GHz band, one 2.4GHz band, and one dedicated monitor or sniffer.		
	dual-5G	Configure radios as one lower 5GHz band, one higher 5GHz band and one 2.4GHz band respectively.		

Parameter	Description	Type	Size	Default
ddscan	Enable/disable use of one radio for dedicated full-band scanning to detect RF characterization and wireless threat management.	option	-	disable
Option	Description			
<i>enable</i>	Enable dedicated full-band scan mode.			
<i>disable</i>	Disable dedicated full-band scan mode.			

## config radio-1

Parameter	Description	Type	Size	Default
mode	Mode of radio 1. Radio 1 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap
Option	Description			
<i>disabled</i>	Radio 1 is disabled.			
<i>ap</i>	Radio 1 operates as an access point that allows WiFi clients to connect to your network.			
<i>monitor</i>	Radio 1 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.			
<i>sniffer</i>	Radio 1 operates as a sniffer capturing WiFi frames on air.			
<i>sam</i>	Radio 1 operates as a station that can connect to a neighboring AP for connectivity and health check.			
band	WiFi band that Radio 1 operates on.	option	-	
Option	Description			
<i>802.11a</i>	802.11a.			
<i>802.11b</i>	802.11b.			
<i>802.11g</i>	802.11g/b.

drma	Enable/disable dynamic radio mode assignment.	option	-	disable																														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable dynamic radio mode assignment (DRMA).</td></tr><tr><td>enable</td><td>Enable dynamic radio mode assignment (DRMA).</td></tr></table>	Option	Description	disable	Disable dynamic radio mode assignment (DRMA).	enable	Enable dynamic radio mode assignment (DRMA).																											
	Option	Description																																
	disable	Disable dynamic radio mode assignment (DRMA).																																
enable	Enable dynamic radio mode assignment (DRMA).																																	
drma-sensitivity	Network Coverage Factor.	option	-	low																														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>low</td><td>Consider a radio as redundant when its NCF is 100%.</td></tr></table>	Option	Description	low	Consider a radio as redundant when its NCF is 100%.																													
	Option	Description																																
low	Consider a radio as redundant when its NCF is 100%.																																	

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>medium</i>	Consider a radio as redundant when its NCF is 95%.		
	<i>high</i>	Consider a radio as redundant when its NCF is 90%.		
airtime-fairness	Enable/disable airtime fairness.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable airtime fairness (ATF) support.		
	<i>disable</i>	Disable airtime fairness (ATF) support.		
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.		
	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.		
	<i>disable</i>	Disable 802.11g protection mode.		
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-	
	<b>Option</b>	<b>Description</b>		
	<i>tim</i>	TIM bit for client in power save mode.		
	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.		
	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.		
	<i>no-11b-rate</i>	Do not send frame using 11b data rate.		
	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.		
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable packet transmission optimization.		

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.		
	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.		
	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.		
	<i>send-bar</i>	Limit transmission of BAR frames.		
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AMSDU support.		
	<i>disable</i>	Disable AMSDU support.		
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.		
	<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.		
zero-wait-dfs	Enable/disable zero wait DFS on radio.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable zero wait DFS		
	<i>disable</i>	Disable zero wait DFS		
bss-color	BSS color value for this 11ax radio.	integer	Minimum value: 0 Maximum value: 63	0
bss-color-mode	BSS color mode for this 11ax radio.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Automatically select BSS color value on AP.		
	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.		

Parameter	Description	Type	Size	Default																		
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Select the 400 ns short guard interval (Short GI).</td></tr><tr><td><i>disable</i></td><td>Select the 800 ns long guard interval (Long GI).</td></tr></table>	Option	Description	<i>enable</i>	Select the 400 ns short guard interval (Short GI).	<i>disable</i>	Select the 800 ns long guard interval (Long GI).															
Option	Description																					
<i>enable</i>	Select the 400 ns short guard interval (Short GI).																					
<i>disable</i>	Select the 800 ns long guard interval (Long GI).																					
channel-bonding	Channel bandwidth: 160,80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>160MHz</i></td><td>160 MHz channel width.</td></tr><tr><td><i>80MHz</i></td><td>80 MHz channel width.</td></tr><tr><td><i>40MHz</i></td><td>40 MHz channel width.</td></tr><tr><td><i>20MHz</i></td><td>20 MHz channel width.</td></tr></table>	Option	Description	<i>160MHz</i>	160 MHz channel width.	<i>80MHz</i>	80 MHz channel width.	<i>40MHz</i>	40 MHz channel width.	<i>20MHz</i>	20 MHz channel width.											
Option	Description																					
<i>160MHz</i>	160 MHz channel width.																					
<i>80MHz</i>	80 MHz channel width.																					
<i>40MHz</i>	40 MHz channel width.																					
<i>20MHz</i>	20 MHz channel width.																					
optional-antenna	Optional antenna used on FAP.	option	-	none																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>FANT-04ABGN-0606-O-N</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-1414-P-N</i></td><td>14 dBi(2.4GHz) and 14 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-8065-P-N</i></td><td>8 dBi(2.4GHz) and 6.5 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-O-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-P-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-10ACAX-1213-D-N</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td><i>FANT-08ABGN-1213-D-R</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	<i>none</i>	None.	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).	<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).			
Option	Description																					
<i>none</i>	None.																					
<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																					
<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).

Parameter	Description	Type	Size	Default						
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.	<i>disable</i>	Disable automatic transmit power adjustment.			
Option	Description									
<i>enable</i>	Enable automatic transmit power adjustment.									
<i>disable</i>	Disable automatic transmit power adjustment.									
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17						
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10						
auto-power-target	Target of automatic transmit power adjustment in dBm.	string	Maximum length: 7	-70						
power-mode	Set radio effective isotropic radiated power. This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.			
Option	Description									
<i>dBm</i>	Set radio EIRP power in dBm.									
<i>percentage</i>	Set radio EIRP power by percentage.									
power-level	Radio EIRP power level as a percentage of the maximum EIRP power.	integer	Minimum value: 0 Maximum value: 100	100						
power-value	Radio EIRP power in dBm.	integer	Minimum value: 1 Maximum value: 33	27						

Parameter	Description	Type	Size	Default						
dtim	Delivery Traffic Indication Map. Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255	1						
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type.	integer	Minimum value: 0 Maximum value: 65535	100						
80211d	Enable/disable 802.11d countryie.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable 802.11d countryie.</td></tr><tr><td>disable</td><td>Disable 802.11d countryie.</td></tr></table>				Option	Description	enable	Enable 802.11d countryie.	disable	Disable 802.11d countryie.
Option	Description									
enable	Enable 802.11d countryie.									
disable	Disable 802.11d countryie.									
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS.	integer	Minimum value: 256 Maximum value: 2346	2346						
frag-threshold	Maximum packet size that can be sent without fragmentation.	integer	Minimum value: 800 Maximum value: 2346	2346						
ap-sniffer-bufsize	Sniffer buffer size.	integer	Minimum value: 1 Maximum value: 32	16						
ap-sniffer-chan	Channel on which to operate the sniffer.	integer	Minimum value: 0 Maximum value: 4294967295	36						
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00						
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable sniffer on WiFi management beacon frame.</td></tr><tr><td>disable</td><td>Disable sniffer on WiFi management beacon frame.</td></tr></table>				Option	Description	enable	Enable sniffer on WiFi management beacon frame.	disable	Disable sniffer on WiFi management beacon frame.
Option	Description									
enable	Enable sniffer on WiFi management beacon frame.									
disable	Disable sniffer on WiFi management beacon frame.									

Parameter	Description	Type	Size	Default								
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr><tr><td><i>disable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management probe frame.	<i>disable</i>	Enable sniffer on WiFi management probe frame.					
Option	Description											
<i>enable</i>	Enable sniffer on WiFi management probe frame.											
<i>disable</i>	Enable sniffer on WiFi management probe frame.											
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames .	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management other frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management other frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management other frame.	<i>disable</i>	Disable sniffer on WiFi management other frame.					
Option	Description											
<i>enable</i>	Enable sniffer on WiFi management other frame.											
<i>disable</i>	Disable sniffer on WiFi management other frame.											
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi control frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi control frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi control frame.	<i>disable</i>	Disable sniffer on WiFi control frame.					
Option	Description											
<i>enable</i>	Enable sniffer on WiFi control frame.											
<i>disable</i>	Disable sniffer on WiFi control frame.											
ap-sniffer-data	Enable/disable sniffer on WiFi data frame.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi data frame</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi data frame</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi data frame	<i>disable</i>	Disable sniffer on WiFi data frame					
Option	Description											
<i>enable</i>	Enable sniffer on WiFi data frame											
<i>disable</i>	Disable sniffer on WiFi data frame											
sam-ssid	SSID for WiFi network.	string	Maximum length: 32									
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00								
sam-security-type	Select WiFi network security type.	option	-	wpa-personal								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Open.</td></tr><tr><td><i>wpa-personal</i></td><td>WPA/WPA2 personal.</td></tr><tr><td><i>wpa-enterprise</i></td><td>WPA/WPA2 enterprise.</td></tr></table>	Option	Description	<i>open</i>	Open.	<i>wpa-personal</i>	WPA/WPA2 personal.	<i>wpa-enterprise</i>	WPA/WPA2 enterprise.			
Option	Description											
<i>open</i>	Open.											
<i>wpa-personal</i>	WPA/WPA2 personal.											
<i>wpa-enterprise</i>	WPA/WPA2 enterprise.											

Parameter	Description	Type	Size	Default						
sam-captive-portal	Enable/disable Captive Portal Authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Captive Portal Authentication.</td></tr><tr><td><i>disable</i></td><td>Disable Captive Portal Authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable Captive Portal Authentication.	<i>disable</i>	Disable Captive Portal Authentication.			
	Option	Description								
	<i>enable</i>	Enable Captive Portal Authentication.								
<i>disable</i>	Disable Captive Portal Authentication.									
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35							
sam-cwp-password	Password for captive portal authentication.	password	Not Specified							
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255							
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64							
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64							
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64							
sam-username	Username for WiFi network connection.	string	Maximum length: 35							
sam-password	Passphrase for WiFi network connection.	password	Not Specified							
sam-test	Select SAM test type.	option	-	ping						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING test.</td></tr><tr><td><i>iperf</i></td><td>IPERF test.</td></tr></table>	Option	Description	<i>ping</i>	PING test.	<i>iperf</i>	IPERF test.			
	Option	Description								
	<i>ping</i>	PING test.								
<i>iperf</i>	IPERF test.									
sam-server-type	Select SAM server type.	option	-	ip						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ip</i></td><td>IPv4 address.</td></tr><tr><td><i>fqdn</i></td><td>Fully Qualified Domain Name address.</td></tr></table>	Option	Description	<i>ip</i>	IPv4 address.	<i>fqdn</i>	Fully Qualified Domain Name address.			
	Option	Description								
	<i>ip</i>	IPv4 address.								
<i>fqdn</i>	Fully Qualified Domain Name address.									
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0						
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255							

Parameter	Description	Type	Size	Default						
iperf-server-port	Iperf service port number.	integer	Minimum value: 0 Maximum value: 65535	5001						
iperf-protocol	Iperf test protocol.	option	-	udp						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>UDP.</td></tr><tr><td>tcp</td><td>TCP.</td></tr></table>	Option	Description	udp	UDP.	tcp	TCP.			
Option	Description									
udp	UDP.									
tcp	TCP.									
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0						
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable measuring channel utilization.</td></tr><tr><td>disable</td><td>Disable measuring channel utilization.</td></tr></table>	Option	Description	enable	Enable measuring channel utilization.	disable	Disable measuring channel utilization.			
Option	Description									
enable	Enable measuring channel utilization.									
disable	Disable measuring channel utilization.									
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35							
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable distributed automatic radio resource provisioning.</td></tr><tr><td>disable</td><td>Disable distributed automatic radio resource provisioning.</td></tr></table>	Option	Description	enable	Enable distributed automatic radio resource provisioning.	disable	Disable distributed automatic radio resource provisioning.			
Option	Description									
enable	Enable distributed automatic radio resource provisioning.									
disable	Disable distributed automatic radio resource provisioning.									
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35							
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 Maximum value: 4294967295	0						

Parameter	Description	Type	Size	Default								
max-distance	Maximum expected distance between the AP and clients.	integer	Minimum value: 0 Maximum value: 54000	0								
vap-all	Configure method for assigning SSIDs to this FortiAP.	option	-	tunnel								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tunnel</td><td>Automatically select tunnel SSIDs.</td></tr><tr><td>bridge</td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td>manual</td><td>Manually select SSIDs.</td></tr></table>	Option	Description	tunnel	Automatically select tunnel SSIDs.	bridge	Automatically select local-bridging SSIDs.	manual	Manually select SSIDs.			
Option	Description											
tunnel	Automatically select tunnel SSIDs.											
bridge	Automatically select local-bridging SSIDs.											
manual	Manually select SSIDs.											
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35									
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3									
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WMM call admission control.</td></tr><tr><td>disable</td><td>Disable WMM call admission control.</td></tr></table>	Option	Description	enable	Enable WMM call admission control.	disable	Disable WMM call admission control.					
Option	Description											
enable	Enable WMM call admission control.											
disable	Disable WMM call admission control.											
call-capacity	Maximum number of Voice over WLAN.	integer	Minimum value: 0 Maximum value: 60	10								
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WMM bandwidth admission control.</td></tr><tr><td>disable</td><td>Disable WMM bandwidth admission control.</td></tr></table>	Option	Description	enable	Enable WMM bandwidth admission control.	disable	Disable WMM bandwidth admission control.					
Option	Description											
enable	Enable WMM bandwidth admission control.											
disable	Disable WMM bandwidth admission control.											

Parameter	Description	Type	Size	Default
bandwidth-capacity	Maximum bandwidth capacity allowed.	integer	Minimum value: 1 Maximum value: 600000	2000

## config radio-2

Parameter	Description	Type	Size	Default																								
mode	Mode of radio 2. Radio 2 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disabled</i></td><td>Radio 2 is disabled.</td></tr><tr><td><i>ap</i></td><td>Radio 2 operates as an access point that allows WiFi clients to connect to your network.</td></tr><tr><td><i>monitor</i></td><td>Radio 2 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.</td></tr><tr><td><i>sniffer</i></td><td>Radio 2 operates as a sniffer capturing WiFi frames on air.</td></tr><tr><td><i>sam</i></td><td>Radio 2 operates as a station that can connect to a neighboring AP for connectivity and health check.</td></tr></table>	Option	Description	<i>disabled</i>	Radio 2 is disabled.	<i>ap</i>	Radio 2 operates as an access point that allows WiFi clients to connect to your network.	<i>monitor</i>	Radio 2 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.	<i>sniffer</i>	Radio 2 operates as a sniffer capturing WiFi frames on air.	<i>sam</i>	Radio 2 operates as a station that can connect to a neighboring AP for connectivity and health check.															
	Option	Description																										
	<i>disabled</i>	Radio 2 is disabled.																										
	<i>ap</i>	Radio 2 operates as an access point that allows WiFi clients to connect to your network.																										
	<i>monitor</i>	Radio 2 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.																										
	<i>sniffer</i>	Radio 2 operates as a sniffer capturing WiFi frames on air.																										
<i>sam</i>	Radio 2 operates as a station that can connect to a neighboring AP for connectivity and health check.																											
band	WiFi band that Radio 2 operates on.	option	-

802.11ax-only	802.11ax at 2.4GHz.																											
band-5g-type	WiFi 5G band type.	option	-	5g-full																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>5g-full</td><td>Full 5G band.</td></tr><tr><td>5g-high</td><td>High 5G band.</td></tr><tr><td>5g-low</td><td>Low 5G band.</td></tr></table>	Option	Description	5g-full	Full 5G band.	5g-high	High 5G band.	5g-low	Low 5G band.																			
	Option	Description																										
	5g-full	Full 5G band.																										
	5g-high	High 5G band.																										
5g-low	Low 5G band.																											
drma	Enable/disable dynamic radio mode assignment.	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable dynamic radio mode assignment (DRMA).</td></tr><tr><td>enable</td><td>Enable dynamic radio mode assignment (DRMA).</td></tr></table>	Option	Description	disable	Disable dynamic radio mode assignment (DRMA).	enable	Enable dynamic radio mode assignment (DRMA).																					
	Option	Description																										
	disable	Disable dynamic radio mode assignment (DRMA).																										
enable	Enable dynamic radio mode assignment (DRMA).																											
drma-sensitivity	Network Coverage Factor.	option	-	low																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>low</td><td>Consider a radio as redundant when its NCF is 100%.</td></tr><tr><td>medium</td><td>Consider a radio as redundant when its NCF is 95%.</td></tr><tr><td>high</td><td>Consider a radio as redundant when its NCF is 90%.</td></tr></table>	Option	Description	low	Consider a radio as redundant when its NCF is 100%.	medium	Consider a radio as redundant when its NCF is 95%.	high	Consider a radio as redundant when its NCF is 90%.																			
	Option	Description																										
	low	Consider a radio as redundant when its NCF is 100%.																										
	medium	Consider a radio as redundant when its NCF is 95%.																										
high	Consider a radio as redundant when its NCF is 90%.																											
airtime-fairness	Enable/disable airtime fairness.	option	-	disable																								

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable airtime fairness (ATF) support.</td></tr><tr><td><i>disable</i></td><td>Disable airtime fairness (ATF) support.</td></tr></table>	Option	Description	<i>enable</i>	Enable airtime fairness (ATF) support.	<i>disable</i>	Disable airtime fairness (ATF) support.									
	Option	Description														
	<i>enable</i>	Enable airtime fairness (ATF) support.														
<i>disable</i>	Disable airtime fairness (ATF) support.															
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rtscts</i></td><td>Enable 802.11g protection RTS/CTS mode.</td></tr><tr><td><i>ctsonly</i></td><td>Enable 802.11g protection CTS only mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11g protection mode.</td></tr></table>	Option	Description	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.	<i>disable</i>	Disable 802.11g protection mode.							
	Option	Description														
	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.														
	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.														
<i>disable</i>	Disable 802.11g protection mode.															
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tim</i></td><td>TIM bit for client in power save mode.</td></tr><tr><td><i>ac-vo</i></td><td>Use AC VO priority to send out packets in the power save queue.</td></tr><tr><td><i>no-obss-scan</i></td><td>Do not put OBSS scan IE into beacon and probe response frames.</td></tr><tr><td><i>no-11b-rate</i></td><td>Do not send frame using 11b data rate.</td></tr><tr><td><i>client-rate-follow</i></td><td>Adapt transmitting PHY rate with receiving PHY rate from a client.</td></tr></table>	Option	Description	<i>tim</i>	TIM bit for client in power save mode.	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.	<i>no-11b-rate</i>	Do not send frame using 11b data rate.	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.			
	Option	Description														
	<i>tim</i>	TIM bit for client in power save mode.														
	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.														
	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.														
	<i>no-11b-rate</i>	Do not send frame using 11b data rate.														
<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.															
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable packet transmission optimization.</td></tr><tr><td><i>power-save</i></td><td>Tag client as operating in power save mode if excessive transmit retries occur.</td></tr><tr><td><i>aggr-limit</i></td><td>Set aggregation limit to a lower value when data rate is low.</td></tr><tr><td><i>retry-limit</i></td><td>Set software retry limit to a lower value when data rate is low.</td></tr><tr><td><i>send-bar</i></td><td>Limit transmission of BAR frames.</td></tr></table>	Option	Description	<i>disable</i>	Disable packet transmission optimization.	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.	<i>send-bar</i>	Limit transmission of BAR frames.			
	Option	Description														
	<i>disable</i>	Disable packet transmission optimization.														
	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.														
	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.														
<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.															
<i>send-bar</i>	Limit transmission of BAR frames.															
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients.	option	-	enable												

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable AMSDU support.		
	<i>disable</i>	Disable AMSDU support.		
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.		
	<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.		
zero-wait-dfs	Enable/disable zero wait DFS on radio.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable zero wait DFS		
	<i>disable</i>	Disable zero wait DFS		
bss-color	BSS color value for this 11ax radio.	integer	Minimum value: 0 Maximum value: 63	0
bss-color-mode	BSS color mode for this 11ax radio.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Automatically select BSS color value on AP.		
	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.		
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Select the 400 ns short guard interval (Short GI).		
	<i>disable</i>	Select the 800 ns long guard interval (Long GI).		
channel-bonding	Channel bandwidth: 160,80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>160MHz</td><td>160 MHz channel width.</td></tr><tr><td>80MHz</td><td>80 MHz channel width.</td></tr><tr><td>40MHz</td><td>40 MHz channel width.</td></tr><tr><td>20MHz</td><td>20 MHz channel width.</td></tr></table>	Option	Description	160MHz	160 MHz channel width.	80MHz	80 MHz channel width.	40MHz	40 MHz channel width.	20MHz	20 MHz channel width.											
	Option	Description																				
	160MHz	160 MHz channel width.																				
	80MHz	80 MHz channel width.																				
	40MHz	40 MHz channel width.																				
20MHz	20 MHz channel width.																					
optional-antenna	Optional antenna used on FAP.	option	-	none																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>None.</td></tr><tr><td>FANT-04ABGN-0606-O-N</td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td>FANT-04ABGN-1414-P-N</td><td>14 dBi(2.4GHz) and 14 dBi(5GHz).</td></tr><tr><td>FANT-04ABGN-8065-P-N</td><td>8 dBi(2.4GHz) and 6.5 dBi(5GHz).</td></tr><tr><td>FANT-04ABGN-0606-O-R</td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td>FANT-04ABGN-0606-P-R</td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td>FANT-10ACAX-1213-D-N</td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td>FANT-08ABGN-1213-D-R</td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	none	None. FANT-04ABGN-0606-O-R	6 dBi(2.4GHz) and 6 dBi(5GHz).	FANT-04ABGN-0606-P-R	6 dBi(2.4GHz) and 6 dBi(5GHz).	FANT-10ACAX-1213-D-N	12 dBi(2.4GHz) and 13 dBi(5GHz).	FANT-08ABGN-1213-D-R	12 dBi(2.4GHz) and 13 dBi(5GHz).			
	Option	Description																				
	none	None.																				
	FANT-04ABGN-0606-O-N	6 dBi(2.4GHz) and 6 dBi(5GHz).																				
	FANT-04ABGN-1414-P-N	14 dBi(2.4GHz) and 14 dBi(5GHz).																				
	FANT-04ABGN-8065-P-N	8 dBi(2.4GHz) and 6.5 dBi(5GHz).																				
	FANT-04ABGN-0606-O-R	6 dBi(2.4GHz) and 6 dBi(5GHz).																				
	FANT-04ABGN-0606-P-R	6 dBi(2.4GHz) and 6 dBi(5GHz).																				
FANT-10ACAX-1213-D-N	12 dBi(2.4GHz) and 13 dBi(5GHz).																					
FANT-08ABGN-1213-D-R	12 dBi(2.4GHz) and 13 dBi(5GHz).																					
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable automatic transmit power adjustment.</td></tr><tr><td>disable</td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	enable	Enable automatic transmit power adjustment.	disable	Disable automatic transmit power adjustment.															
	Option	Description																				
	enable	Enable automatic transmit power adjustment.																				
disable	Disable automatic transmit power adjustment.																					
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17																		

Parameter	Description	Type	Size	Default						
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10						
auto-power-target	Target of automatic transmit power adjustment in dBm.	string	Maximum length: 7	-70						
power-mode	Set radio effective isotropic radiated power. This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>				Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.
Option	Description									
<i>dBm</i>	Set radio EIRP power in dBm.									
<i>percentage</i>	Set radio EIRP power by percentage.									
power-level	Radio EIRP power level as a percentage of the maximum EIRP power.	integer	Minimum value: 0 Maximum value: 100	100						
power-value	Radio EIRP power in dBm.	integer	Minimum value: 1 Maximum value: 33	27						
dtim	Delivery Traffic Indication Map. Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255	1						
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type.	integer	Minimum value: 0 Maximum value: 65535	100						
80211d	Enable/disable 802.11d countryie.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11d countryie.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11d countryie.</td></tr></table>				Option	Description	<i>enable</i>	Enable 802.11d countryie.	<i>disable</i>	Disable 802.11d countryie.
Option	Description									
<i>enable</i>	Enable 802.11d countryie.									
<i>disable</i>	Disable 802.11d countryie.									

Parameter	Description	Type	Size	Default
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS.	integer	Minimum value: 256 Maximum value: 2346	2346
frag-threshold	Maximum packet size that can be sent without fragmentation.	integer	Minimum value: 800 Maximum value: 2346	2346
ap-sniffer-bufsize	Sniffer buffer size.	integer	Minimum value: 1 Maximum value: 32	16
ap-sniffer-chan	Channel on which to operate the sniffer.	integer	Minimum value: 0 Maximum value: 4294967295	6
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames.	option	-	enable
	<b>Option</b>		<b>Description</b>	
	<i>enable</i>		Enable sniffer on WiFi management beacon frame.	
	<i>disable</i>		Disable sniffer on WiFi management beacon frame.	
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames.	option	-	enable
	<b>Option</b>		<b>Description</b>	
	<i>enable</i>		Enable sniffer on WiFi management probe frame.	
	<i>disable</i>		Enable sniffer on WiFi management probe frame.	
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames .	option	-	enable
	<b>Option</b>		<b>Description</b>	
	<i>enable</i>		Enable sniffer on WiFi management other frame.	
	<i>disable</i>		Disable sniffer on WiFi management other frame.	

Parameter	Description	Type	Size	Default								
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi control frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi control frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi control frame.	<i>disable</i>	Disable sniffer on WiFi control frame.					
Option	Description											
<i>enable</i>	Enable sniffer on WiFi control frame.											
<i>disable</i>	Disable sniffer on WiFi control frame.											
ap-sniffer-data	Enable/disable sniffer on WiFi data frame.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi data frame</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi data frame</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi data frame	<i>disable</i>	Disable sniffer on WiFi data frame					
Option	Description											
<i>enable</i>	Enable sniffer on WiFi data frame											
<i>disable</i>	Disable sniffer on WiFi data frame											
sam-ssid	SSID for WiFi network.	string	Maximum length: 32									
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00								
sam-security-type	Select WiFi network security type.	option	-	wpa-personal								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Open.</td></tr><tr><td><i>wpa-personal</i></td><td>WPA/WPA2 personal.</td></tr><tr><td><i>wpa-enterprise</i></td><td>WPA/WPA2 enterprise.</td></tr></table>	Option	Description	<i>open</i>	Open.	<i>wpa-personal</i>	WPA/WPA2 personal.	<i>wpa-enterprise</i>	WPA/WPA2 enterprise.			
Option	Description											
<i>open</i>	Open.											
<i>wpa-personal</i>	WPA/WPA2 personal.											
<i>wpa-enterprise</i>	WPA/WPA2 enterprise.											
sam-captive-portal	Enable/disable Captive Portal Authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Captive Portal Authentication.</td></tr><tr><td><i>disable</i></td><td>Disable Captive Portal Authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable Captive Portal Authentication.	<i>disable</i>	Disable Captive Portal Authentication.					
Option	Description											
<i>enable</i>	Enable Captive Portal Authentication.											
<i>disable</i>	Disable Captive Portal Authentication.											
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35									
sam-cwp-password	Password for captive portal authentication.	password	Not Specified									
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255									

Parameter	Description	Type	Size	Default						
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64							
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64							
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64							
sam-username	Username for WiFi network connection.	string	Maximum length: 35							
sam-password	Passphrase for WiFi network connection.	password	Not Specified							
sam-test	Select SAM test type.	option	-	ping						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING test.</td></tr><tr><td><i>iperf</i></td><td>IPERF test.</td></tr></table>				Option	Description	<i>ping</i>	PING test.	<i>iperf</i>	IPERF test.
Option	Description									
<i>ping</i>	PING test.									
<i>iperf</i>	IPERF test.									
sam-server-type	Select SAM server type.	option	-	ip						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ip</i></td><td>IPv4 address.</td></tr><tr><td><i>fqdn</i></td><td>Fully Qualified Domain Name address.</td></tr></table>				Option	Description	<i>ip</i>	IPv4 address.	<i>fqdn</i>	Fully Qualified Domain Name address.
Option	Description									
<i>ip</i>	IPv4 address.									
<i>fqdn</i>	Fully Qualified Domain Name address.									
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0						
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255							
iperf-server-port	Iperf service port number.	integer	Minimum value: 0 Maximum value: 65535	5001						
iperf-protocol	Iperf test protocol.	option	-	udp						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>udp</i></td><td>UDP.</td></tr><tr><td><i>tcp</i></td><td>TCP.</td></tr></table>				Option	Description	<i>udp</i>	UDP.	<i>tcp</i>	TCP.
Option	Description									
<i>udp</i>	UDP.									
<i>tcp</i>	TCP.									

Parameter	Description	Type	Size	Default								
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0								
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable measuring channel utilization.</td></tr><tr><td><i>disable</i></td><td>Disable measuring channel utilization.</td></tr></table>	Option	Description	<i>enable</i>	Enable measuring channel utilization.	<i>disable</i>	Disable measuring channel utilization.					
Option	Description											
<i>enable</i>	Enable measuring channel utilization.											
<i>disable</i>	Disable measuring channel utilization.											
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35									
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable distributed automatic radio resource provisioning.</td></tr><tr><td><i>disable</i></td><td>Disable distributed automatic radio resource provisioning.</td></tr></table>	Option	Description	<i>enable</i>	Enable distributed automatic radio resource provisioning.	<i>disable</i>	Disable distributed automatic radio resource provisioning.					
Option	Description											
<i>enable</i>	Enable distributed automatic radio resource provisioning.											
<i>disable</i>	Disable distributed automatic radio resource provisioning.											
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35									
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 Maximum value: 4294967295	0								
max-distance	Maximum expected distance between the AP and clients.	integer	Minimum value: 0 Maximum value: 54000	0								
vap-all	Configure method for assigning SSIDs to this FortiAP.	option	-	tunnel								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tunnel</i></td><td>Automatically select tunnel SSIDs.</td></tr><tr><td><i>bridge</i></td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td><i>manual</i></td><td>Manually select SSIDs.</td></tr></table>	Option	Description	<i>tunnel</i>	Automatically select tunnel SSIDs.	<i>bridge</i>	Automatically select local-bridging SSIDs.	<i>manual</i>	Manually select SSIDs.			
Option	Description											
<i>tunnel</i>	Automatically select tunnel SSIDs.											
<i>bridge</i>	Automatically select local-bridging SSIDs.											
<i>manual</i>	Manually select SSIDs.											

Parameter	Description	Type	Size	Default						
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35							
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3							
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WMM call admission control.</td></tr><tr><td>disable</td><td>Disable WMM call admission control.</td></tr></table>				Option	Description	enable	Enable WMM call admission control.	disable	Disable WMM call admission control.
Option	Description									
enable	Enable WMM call admission control.									
disable	Disable WMM call admission control.									
call-capacity	Maximum number of Voice over WLAN.	integer	Minimum value: 0 Maximum value: 60	10						
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WMM bandwidth admission control.</td></tr><tr><td>disable</td><td>Disable WMM bandwidth admission control.</td></tr></table>				Option	Description	enable	Enable WMM bandwidth admission control.	disable	Disable WMM bandwidth admission control.
Option	Description									
enable	Enable WMM bandwidth admission control.									
disable	Disable WMM bandwidth admission control.									
bandwidth-capacity	Maximum bandwidth capacity allowed.	integer	Minimum value: 1 Maximum value: 600000	2000						

### config radio-3

Parameter	Description	Type	Size	Default
mode	Mode of radio 3. Radio 3 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disabled</i>	Radio 3 is disabled.		
	<i>ap</i>	Radio 3 operates as an access point that allows WiFi clients to connect to your network.		
	<i>monitor</i>	Radio 3 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.		
	<i>sniffer</i>	Radio 3 operates as a sniffer capturing WiFi frames on air.		
	<i>sam</i>	Radio 3 operates as a station that can connect to a neighboring AP for connectivity and health check.		
band	WiFi band that Radio 3 operates on.	option	-	
	<b>Option</b>	<b>Description</b>		
	<i>802.11a</i>	802.11a.		
	<i>802.11b</i>	802.11b.		
	<i>802.11g</i>	802.11g/b.		
	<i>802.11n</i>	802.11n/g/b at 2.4GHz.		
	<i>802.11n-5G</i>	802.11n/a at 5GHz.		
	<i>802.11ac</i>	802.11ac/n/a.		
	<i>802.11ax-5G</i>	802.11ax/ac/n/a at 5GHz.		
	<i>802.11ax</i>	802.11ax/n/g/b at 2.4GHz.		
	<i>802.11ac-2G</i>	802.11ac at 2.4GHz.		
	<i>802.11ax-6G</i>	802.11ax at 6GHz.		
	<i>802.11n,g-only</i>	802.11n/g at 2.4GHz.		
	<i>802.11g-only</i>	802.11g.		
	<i>802.11n-only</i>	802.11n at 2.4GHz.		
	<i>802.11n-5G-only</i>	802.11n at 5GHz.		
	<i>802.11ac,n-only</i>	802.11ac/n.		
	<i>802.11ac-only</i>	802.11ac.		
	<i>802.11ax,ac-only</i>	802.11ax/ac at 5GHz.		
	<i>802.11ax,ac,n-only</i>	802.11ax/ac/n at 5GHz.		
	<i>802.11ax-5G-only</i>	802.11ax at 5GHz.		
<i>802.11ax,n-only</i>	802.11ax/n at 2.4GHz.			

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>802.11ax,n,g-only</i>	802.11ax/n/g at 2.4GHz.		
	<i>802.11ax-only</i>	802.11ax at 2.4GHz.		
band-5g-type	WiFi 5G band type.	option	-	5g-full
	<b>Option</b>	<b>Description</b>		
	<i>5g-full</i>	Full 5G band.		
	<i>5g-high</i>	High 5G band.		
	<i>5g-low</i>	Low 5G band.		
drma	Enable/disable dynamic radio mode assignment.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable dynamic radio mode assignment (DRMA).		
	<i>enable</i>	Enable dynamic radio mode assignment (DRMA).		
drma-sensitivity	Network Coverage Factor.	option	-	low
	<b>Option</b>	<b>Description</b>		
	<i>low</i>	Consider a radio as redundant when its NCF is 100%.		
	<i>medium</i>	Consider a radio as redundant when its NCF is 95%.		
	<i>high</i>	Consider a radio as redundant when its NCF is 90%.		
airtime-fairness	Enable/disable airtime fairness.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable airtime fairness (ATF) support.		
	<i>disable</i>	Disable airtime fairness (ATF) support.		
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.		

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ctsonly</i></td><td>Enable 802.11g protection CTS only mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11g protection mode.</td></tr></table>	Option	Description	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.	<i>disable</i>	Disable 802.11g protection mode.									
Option	Description															
<i>ctsonly</i>	Enable 802.11g protection CTS only mode.															
<i>disable</i>	Disable 802.11g protection mode.															
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tim</i></td><td>TIM bit for client in power save mode.</td></tr><tr><td><i>ac-vo</i></td><td>Use AC VO priority to send out packets in the power save queue.</td></tr><tr><td><i>no-obss-scan</i></td><td>Do not put OBSS scan IE into beacon and probe response frames.</td></tr><tr><td><i>no-11b-rate</i></td><td>Do not send frame using 11b data rate.</td></tr><tr><td><i>client-rate-follow</i></td><td>Adapt transmitting PHY rate with receiving PHY rate from a client.</td></tr></table>	Option	Description	<i>tim</i>	TIM bit for client in power save mode.	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.	<i>no-11b-rate</i>	Do not send frame using 11b data rate.	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.			
Option	Description															
<i>tim</i>	TIM bit for client in power save mode.															
<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.															
<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.															
<i>no-11b-rate</i>	Do not send frame using 11b data rate.															
<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.															
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable packet transmission optimization.</td></tr><tr><td><i>power-save</i></td><td>Tag client as operating in power save mode if excessive transmit retries occur.</td></tr><tr><td><i>aggr-limit</i></td><td>Set aggregation limit to a lower value when data rate is low.</td></tr><tr><td><i>retry-limit</i></td><td>Set software retry limit to a lower value when data rate is low.</td></tr><tr><td><i>send-bar</i></td><td>Limit transmission of BAR frames.</td></tr></table>	Option	Description	<i>disable</i>	Disable packet transmission optimization.	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.	<i>send-bar</i>	Limit transmission of BAR frames.			
Option	Description															
<i>disable</i>	Disable packet transmission optimization.															
<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.															
<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.															
<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.															
<i>send-bar</i>	Limit transmission of BAR frames.															
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AMSDU support.</td></tr><tr><td><i>disable</i></td><td>Disable AMSDU support.</td></tr></table>	Option	Description	<i>enable</i>	Enable AMSDU support.	<i>disable</i>	Disable AMSDU support.									
Option	Description															
<i>enable</i>	Enable AMSDU support.															
<i>disable</i>	Disable AMSDU support.															
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio.	option	-	enable												

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.		
	<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.		
zero-wait-dfs	Enable/disable zero wait DFS on radio.	option	-	enable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable zero wait DFS		
	<i>disable</i>	Disable zero wait DFS		
bss-color	BSS color value for this 11ax radio.	integer	Minimum value: 0 Maximum value: 63	0
bss-color-mode	BSS color mode for this 11ax radio.	option	-	auto
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Automatically select BSS color value on AP.		
	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.		
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Select the 400 ns short guard interval (Short GI).		
	<i>disable</i>	Select the 800 ns long guard interval (Long GI).		
channel-bonding	Channel bandwidth: 160,80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz
	<b>Option</b>	<b>Description</b>		
	<i>160MHz</i>	160 MHz channel width.		
	<i>80MHz</i>	80 MHz channel width.		
	<i>40MHz</i>	40 MHz channel width.		
	<i>20MHz</i>	20 MHz channel width.		

Parameter	Description	Type	Size	Default																		
optional-antenna	Optional antenna used on FAP.	option	-	none																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>FANT-04ABGN-0606-O-N</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-1414-P-N</i></td><td>14 dBi(2.4GHz) and 14 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-8065-P-N</i></td><td>8 dBi(2.4GHz) and 6.5 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-O-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-P-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-10ACAX-1213-D-N</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td><i>FANT-08ABGN-1213-D-R</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	<i>none</i>	None.	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).	<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).			
	Option	Description																				
	<i>none</i>	None.																				
	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																				
	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).																				
	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).																				
	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																				
	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																				
	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																				
<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																					
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.	<i>disable</i>	Disable automatic transmit power adjustment.															
	Option	Description																				
	<i>enable</i>	Enable automatic transmit power adjustment.																				
<i>disable</i>	Disable automatic transmit power adjustment.																					
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17																		
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10																		
auto-power-target	Target of automatic transmit power adjustment in dBm.	string	Maximum length: 7	-70																		

Parameter	Description	Type	Size	Default						
power-mode	Set radio effective isotropic radiated power. This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.			
Option	Description									
<i>dBm</i>	Set radio EIRP power in dBm.									
<i>percentage</i>	Set radio EIRP power by percentage.									
power-level	Radio EIRP power level as a percentage of the maximum EIRP power.	integer	Minimum value: 0 Maximum value: 100	100						
power-value	Radio EIRP power in dBm.	integer	Minimum value: 1 Maximum value: 33	27						
dtim	Delivery Traffic Indication Map. Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255	1						
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type.	integer	Minimum value: 0 Maximum value: 65535	100						
80211d	Enable/disable 802.11d countryie.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11d countryie.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11d countryie.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11d countryie.	<i>disable</i>	Disable 802.11d countryie.			
Option	Description									
<i>enable</i>	Enable 802.11d countryie.									
<i>disable</i>	Disable 802.11d countryie.									
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS.	integer	Minimum value: 256 Maximum value: 2346	2346						
frag-threshold	Maximum packet size that can be sent without fragmentation.	integer	Minimum value: 800 Maximum value: 2346	2346						

Parameter	Description	Type	Size	Default						
ap-sniffer-bufsize	Sniffer buffer size.	integer	Minimum value: 1 Maximum value: 32	16						
ap-sniffer-chan	Channel on which to operate the sniffer.	integer	Minimum value: 0 Maximum value: 4294967295	6						
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00						
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management beacon frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management beacon frame.</td></tr></table>				Option	Description	<i>enable</i>	Enable sniffer on WiFi management beacon frame.	<i>disable</i>	Disable sniffer on WiFi management beacon frame.
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management beacon frame.									
<i>disable</i>	Disable sniffer on WiFi management beacon frame.									
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr><tr><td><i>disable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr></table>				Option	Description	<i>enable</i>	Enable sniffer on WiFi management probe frame.	<i>disable</i>	Enable sniffer on WiFi management probe frame.
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management probe frame.									
<i>disable</i>	Enable sniffer on WiFi management probe frame.									
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames .	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management other frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management other frame.</td></tr></table>				Option	Description	<i>enable</i>	Enable sniffer on WiFi management other frame.	<i>disable</i>	Disable sniffer on WiFi management other frame.
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management other frame.									
<i>disable</i>	Disable sniffer on WiFi management other frame.									
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi control frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi control frame.</td></tr></table>				Option	Description	<i>enable</i>	Enable sniffer on WiFi control frame.	<i>disable</i>	Disable sniffer on WiFi control frame.
Option	Description									
<i>enable</i>	Enable sniffer on WiFi control frame.									
<i>disable</i>	Disable sniffer on WiFi control frame.									
ap-sniffer-data	Enable/disable sniffer on WiFi data frame.	option	-	enable						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable sniffer on WiFi data frame		
	<i>disable</i>	Disable sniffer on WiFi data frame		
sam-ssid	SSID for WiFi network.	string	Maximum length: 32	
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00
sam-security-type	Select WiFi network security type.	option	-	wpa-personal
	<b>Option</b>	<b>Description</b>		
	<i>open</i>	Open.		
	<i>wpa-personal</i>	WPA/WPA2 personal.		
	<i>wpa-enterprise</i>	WPA/WPA2 enterprise.		
sam-captive-portal	Enable/disable Captive Portal Authentication.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable Captive Portal Authentication.		
	<i>disable</i>	Disable Captive Portal Authentication.		
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35	
sam-cwp-password	Password for captive portal authentication.	password	Not Specified	
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255	
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64	
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64	
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64	
sam-username	Username for WiFi network connection.	string	Maximum length: 35	
sam-password	Passphrase for WiFi network connection.	password	Not Specified	

Parameter	Description	Type	Size	Default
sam-test	Select SAM test type.	option	-	ping
	<b>Option</b> <b>Description</b>			
	<i>ping</i>	PING test.		
	<i>iperf</i>	IPERF test.		
sam-server-type	Select SAM server type.	option	-	ip
	<b>Option</b> <b>Description</b>			
	<i>ip</i>	IPv4 address.		
	<i>fqdn</i>	Fully Qualified Domain Name address.		
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255	
iperf-server-port	Iperf service port number.	integer	Minimum value: 0 Maximum value: 65535	5001
iperf-protocol	Iperf test protocol.	option	-	udp
	<b>Option</b> <b>Description</b>			
	<i>udp</i>	UDP.		
	<i>tcp</i>	TCP.		
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable measuring channel utilization.		
	<i>disable</i>	Disable measuring channel utilization.		
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default								
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable distributed automatic radio resource provisioning.</td></tr><tr><td><i>disable</i></td><td>Disable distributed automatic radio resource provisioning.</td></tr></table>	Option	Description	<i>enable</i>	Enable distributed automatic radio resource provisioning.	<i>disable</i>	Disable distributed automatic radio resource provisioning.					
Option	Description											
<i>enable</i>	Enable distributed automatic radio resource provisioning.											
<i>disable</i>	Disable distributed automatic radio resource provisioning.											
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35									
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 Maximum value: 4294967295	0								
max-distance	Maximum expected distance between the AP and clients.	integer	Minimum value: 0 Maximum value: 54000	0								
vap-all	Configure method for assigning SSIDs to this FortiAP.	option	-	tunnel								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tunnel</i></td><td>Automatically select tunnel SSIDs.</td></tr><tr><td><i>bridge</i></td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td><i>manual</i></td><td>Manually select SSIDs.</td></tr></table>	Option	Description	<i>tunnel</i>	Automatically select tunnel SSIDs.	<i>bridge</i>	Automatically select local-bridging SSIDs.	<i>manual</i>	Manually select SSIDs.			
Option	Description											
<i>tunnel</i>	Automatically select tunnel SSIDs.											
<i>bridge</i>	Automatically select local-bridging SSIDs.											
<i>manual</i>	Manually select SSIDs.											
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35									
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3									
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM call admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM call admission control.							
Option	Description											
<i>enable</i>	Enable WMM call admission control.											

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable WMM call admission control.		
call-capacity	Maximum number of Voice over WLAN.	integer	Minimum value: 0 Maximum value: 60	10
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable WMM bandwidth admission control.		
	<i>disable</i>	Disable WMM bandwidth admission control.		
bandwidth-capacity	Maximum bandwidth capacity allowed.	integer	Minimum value: 1 Maximum value: 600000	2000

#### config radio-4

Parameter	Description	Type	Size	Default
mode	Mode of radio 3. Radio 3 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap
	<b>Option</b>	<b>Description</b>		
	<i>disabled</i>	Radio 3 is disabled.		
	<i>ap</i>	Radio 3 operates as an access point that allows WiFi clients to connect to your network.		
	<i>monitor</i>	Radio 3 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.		
	<i>sniffer</i>	Radio 3 operates as a sniffer capturing WiFi frames on air.		
	<i>sam</i>	Radio 3 operates as a station that can connect to a neighboring AP for connectivity and health check.		
band	WiFi band that Radio 3 operates on.	option	-	

Parameter	Description	Type	Size	Default

drma	Enable/disable dynamic radio mode assignment.	option	-	disable																																															

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>disable</i>	Disable dynamic radio mode assignment (DRMA).		
	<i>enable</i>	Enable dynamic radio mode assignment (DRMA).		
drma-sensitivity	Network Coverage Factor.	option	-	low
	<b>Option</b>	<b>Description</b>		
	<i>low</i>	Consider a radio as redundant when its NCF is 100%.		
	<i>medium</i>	Consider a radio as redundant when its NCF is 95%.		
	<i>high</i>	Consider a radio as redundant when its NCF is 90%.		
airtime-fairness	Enable/disable airtime fairness.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable airtime fairness (ATF) support.		
	<i>disable</i>	Disable airtime fairness (ATF) support.		
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.		
	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.		
	<i>disable</i>	Disable 802.11g protection mode.		
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-	
	<b>Option</b>	<b>Description</b>		
	<i>tim</i>	TIM bit for client in power save mode.		
	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.		
	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.		
	<i>no-11b-rate</i>	Do not send frame using 11b data rate.		
	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.		

Parameter	Description	Type	Size	Default												
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable packet transmission optimization.</td></tr><tr><td><i>power-save</i></td><td>Tag client as operating in power save mode if excessive transmit retries occur.</td></tr><tr><td><i>aggr-limit</i></td><td>Set aggregation limit to a lower value when data rate is low.</td></tr><tr><td><i>retry-limit</i></td><td>Set software retry limit to a lower value when data rate is low.</td></tr><tr><td><i>send-bar</i></td><td>Limit transmission of BAR frames.</td></tr></table>	Option	Description	<i>disable</i>	Disable packet transmission optimization.	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.	<i>send-bar</i>	Limit transmission of BAR frames.			
Option	Description															
<i>disable</i>	Disable packet transmission optimization.															
<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.															
<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.															
<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.															
<i>send-bar</i>	Limit transmission of BAR frames.															
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AMSDU support.</td></tr><tr><td><i>disable</i></td><td>Disable AMSDU support.</td></tr></table>	Option	Description	<i>enable</i>	Enable AMSDU support.	<i>disable</i>	Disable AMSDU support.									
Option	Description															
<i>enable</i>	Enable AMSDU support.															
<i>disable</i>	Disable AMSDU support.															
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable support for both HT20 and HT40 on the same radio.</td></tr><tr><td><i>disable</i></td><td>Disable support for both HT20 and HT40 on the same radio.</td></tr></table>	Option	Description	<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.	<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.									
Option	Description															
<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.															
<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.															
zero-wait-dfs	Enable/disable zero wait DFS on radio.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable zero wait DFS</td></tr><tr><td><i>disable</i></td><td>Disable zero wait DFS</td></tr></table>	Option	Description	<i>enable</i>	Enable zero wait DFS	<i>disable</i>	Disable zero wait DFS									
Option	Description															
<i>enable</i>	Enable zero wait DFS															
<i>disable</i>	Disable zero wait DFS															
bss-color	BSS color value for this 11ax radio.	integer	Minimum value: 0 Maximum value: 63	0												
bss-color-mode	BSS color mode for this 11ax radio.	option	-	auto												

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>auto</i>	Automatically select BSS color value on AP.		
	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.		
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Select the 400 ns short guard interval (Short GI).		
	<i>disable</i>	Select the 800 ns long guard interval (Long GI).		
channel-bonding	Channel bandwidth: 160,80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz
	<b>Option</b>	<b>Description</b>		
	<i>160MHz</i>	160 MHz channel width.		
	<i>80MHz</i>	80 MHz channel width.		
	<i>40MHz</i>	40 MHz channel width.		
	<i>20MHz</i>	20 MHz channel width.		
optional-antenna	Optional antenna used on FAP.	option	-	none
	<b>Option</b>	<b>Description</b>		
	<i>none</i>	None.		
	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).		
	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).		
	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).		
	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).		
	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).		

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>FANT-10ACAX-1213-D-N</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td><i>FANT-08ABGN-1213-D-R</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).	<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).			
	Option	Description								
	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).								
<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).									
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.	<i>disable</i>	Disable automatic transmit power adjustment.			
	Option	Description								
	<i>enable</i>	Enable automatic transmit power adjustment.								
<i>disable</i>	Disable automatic transmit power adjustment.									
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17						
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10						
auto-power-target	Target of automatic transmit power adjustment in dBm.	string	Maximum length: 7	-70						
power-mode	Set radio effective isotropic radiated power. This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.			
	Option	Description								
	<i>dBm</i>	Set radio EIRP power in dBm.								
<i>percentage</i>	Set radio EIRP power by percentage.									
power-level	Radio EIRP power level as a percentage of the maximum EIRP power.	integer	Minimum value: 0 Maximum value: 100	100						

Parameter	Description	Type	Size	Default						
power-value	Radio EIRP power in dBm.	integer	Minimum value: 1 Maximum value: 33	27						
dtim	Delivery Traffic Indication Map. Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255	1						
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type.	integer	Minimum value: 0 Maximum value: 65535	100						
80211d	Enable/disable 802.11d countryie.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable 802.11d countryie.</td></tr><tr><td>disable</td><td>Disable 802.11d countryie.</td></tr></table>				Option	Description	enable	Enable 802.11d countryie.	disable	Disable 802.11d countryie.
Option	Description									
enable	Enable 802.11d countryie.									
disable	Disable 802.11d countryie.									
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS.	integer	Minimum value: 256 Maximum value: 2346	2346						
frag-threshold	Maximum packet size that can be sent without fragmentation.	integer	Minimum value: 800 Maximum value: 2346	2346						
ap-sniffer-bufsize	Sniffer buffer size.	integer	Minimum value: 1 Maximum value: 32	16						
ap-sniffer-chan	Channel on which to operate the sniffer.	integer	Minimum value: 0 Maximum value: 4294967295	6						
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00						
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames.	option	-	enable						

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable sniffer on WiFi management beacon frame.		
	<i>disable</i>	Disable sniffer on WiFi management beacon frame.		
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable sniffer on WiFi management probe frame.		
	<i>disable</i>	Enable sniffer on WiFi management probe frame.		
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames .	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable sniffer on WiFi management other frame.		
	<i>disable</i>	Disable sniffer on WiFi management other frame.		
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable sniffer on WiFi control frame.		
	<i>disable</i>	Disable sniffer on WiFi control frame.		
ap-sniffer-data	Enable/disable sniffer on WiFi data frame.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable sniffer on WiFi data frame		
	<i>disable</i>	Disable sniffer on WiFi data frame		
sam-ssid	SSID for WiFi network.	string	Maximum length: 32	
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00
sam-security-type	Select WiFi network security type.	option	-	wpa-personal

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Open.</td></tr><tr><td><i>wpa-personal</i></td><td>WPA/WPA2 personal.</td></tr><tr><td><i>wpa-enterprise</i></td><td>WPA/WPA2 enterprise.</td></tr></table>	Option	Description	<i>open</i>	Open.	<i>wpa-personal</i>	WPA/WPA2 personal.	<i>wpa-enterprise</i>	WPA/WPA2 enterprise.			
	Option	Description										
	<i>open</i>	Open.										
	<i>wpa-personal</i>	WPA/WPA2 personal.										
<i>wpa-enterprise</i>	WPA/WPA2 enterprise.											
sam-captive-portal	Enable/disable Captive Portal Authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Captive Portal Authentication.</td></tr><tr><td><i>disable</i></td><td>Disable Captive Portal Authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable Captive Portal Authentication.	<i>disable</i>	Disable Captive Portal Authentication.					
	Option	Description										
	<i>enable</i>	Enable Captive Portal Authentication.										
<i>disable</i>	Disable Captive Portal Authentication.											
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35									
sam-cwp-password	Password for captive portal authentication.	password	Not Specified									
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255									
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64									
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64									
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64									
sam-username	Username for WiFi network connection.	string	Maximum length: 35									
sam-password	Passphrase for WiFi network connection.	password	Not Specified									
sam-test	Select SAM test type.	option	-	ping								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING test.</td></tr><tr><td><i>iperf</i></td><td>IPERF test.</td></tr></table>	Option	Description	<i>ping</i>	PING test.	<i>iperf</i>	IPERF test.					
	Option	Description										
	<i>ping</i>	PING test.										
<i>iperf</i>	IPERF test.											
sam-server-type	Select SAM server type.	option	-	ip								

Parameter	Description	Type	Size	Default
	<b>Option</b> <b>Description</b>			
	<i>ip</i>	IPv4 address.		
	<i>fqdn</i>	Fully Qualified Domain Name address.		
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255	
iperf-server-port	Iperf service port number.	integer	Minimum value: 0 Maximum value: 65535	5001
iperf-protocol	Iperf test protocol.	option	-	udp
	<b>Option</b> <b>Description</b>			
	<i>udp</i>	UDP.		
	<i>tcp</i>	TCP.		
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable measuring channel utilization.		
	<i>disable</i>	Disable measuring channel utilization.		
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35	
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning.	option	-	disable
	<b>Option</b> <b>Description</b>			
	<i>enable</i>	Enable distributed automatic radio resource provisioning.		
	<i>disable</i>	Disable distributed automatic radio resource provisioning.		

Parameter	Description	Type	Size	Default								
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35									
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 Maximum value: 4294967295	0								
max-distance	Maximum expected distance between the AP and clients.	integer	Minimum value: 0 Maximum value: 54000	0								
vap-all	Configure method for assigning SSIDs to this FortiAP.	option	-	tunnel								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tunnel</td><td>Automatically select tunnel SSIDs.</td></tr><tr><td>bridge</td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td>manual</td><td>Manually select SSIDs.</td></tr></table>				Option	Description	tunnel	Automatically select tunnel SSIDs.	bridge	Automatically select local-bridging SSIDs.	manual	Manually select SSIDs.
Option	Description											
tunnel	Automatically select tunnel SSIDs.											
bridge	Automatically select local-bridging SSIDs.											
manual	Manually select SSIDs.											
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35									
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3									
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WMM call admission control.</td></tr><tr><td>disable</td><td>Disable WMM call admission control.</td></tr></table>				Option	Description	enable	Enable WMM call admission control.	disable	Disable WMM call admission control.		
Option	Description											
enable	Enable WMM call admission control.											
disable	Disable WMM call admission control.											
call-capacity	Maximum number of Voice over WLAN.	integer	Minimum value: 0 Maximum value: 60	10								

Parameter	Description	Type	Size	Default						
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM bandwidth admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM bandwidth admission control.</td></tr></table>				Option	Description	<i>enable</i>	Enable WMM bandwidth admission control.	<i>disable</i>	Disable WMM bandwidth admission control.
	Option	Description								
	<i>enable</i>	Enable WMM bandwidth admission control.								
<i>disable</i>	Disable WMM bandwidth admission control.									
bandwidth-capacity	Maximum bandwidth capacity allowed.	integer	Minimum value: 1 Maximum value: 600000	2000						

### config split-tunneling-acl

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
dest-ip	Destination IP and mask for the split-tunneling subnet.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

### config wireless-controller wtp

Configure Wireless Termination Points (WTPs), that is, FortiAPs or APs to be managed by FortiGate.

```
config wireless-controller wtp
  Description: Configure Wireless Termination Points (WTPs), that is, FortiAPs or APs to
  be managed by FortiGate.

## config wireless-controller wtp

Parameter	Description	Type	Size	Default								
admin	Configure how the FortiGate operating as a wireless controller discovers and manages this WTP, AP or FortiAP.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discovered</i></td><td>FortiGate wireless controller discovers the WTP, AP, or FortiAP though discovery or join request messages.</td></tr><tr><td><i>disable</i></td><td>FortiGate wireless controller is configured to not provide service to this WTP.</td></tr><tr><td><i>enable</i></td><td>FortiGate wireless controller is configured to provide service to this WTP.</td></tr></table>	Option	Description	<i>discovered</i>	FortiGate wireless controller discovers the WTP, AP, or FortiAP though discovery or join request messages.	<i>disable</i>	FortiGate wireless controller is configured to not provide service to this WTP.	<i>enable</i>	FortiGate wireless controller is configured to provide service to this WTP.			
Option	Description											
<i>discovered</i>	FortiGate wireless controller discovers the WTP, AP, or FortiAP though discovery or join request messages.											
<i>disable</i>	FortiGate wireless controller is configured to not provide service to this WTP.											
<i>enable</i>	FortiGate wireless controller is configured to provide service to this WTP.											
allowaccess	Control management access to the managed WTP, FortiAP, or AP. Separate entries with a space.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>https</i></td><td>HTTPS access.</td></tr><tr><td><i>ssh</i></td><td>SSH access.</td></tr><tr><td><i>snmp</i></td><td>SNMP access.</td></tr></table>	Option	Description	<i>https</i>	HTTPS access.	<i>ssh</i>	SSH access.	<i>snmp</i>	SNMP access.			
Option	Description											
<i>https</i>	HTTPS access.											
<i>ssh</i>	SSH access.											
<i>snmp</i>	SNMP access.											
apcfg-profile	AP local configuration profile name.	string	Maximum length: 35									

Parameter	Description	Type	Size	Default						
ble-major-id	Override BLE Major ID.	integer	Minimum value: 0 Maximum value: 65535	0						
ble-minor-id	Override BLE Minor ID.	integer	Minimum value: 0 Maximum value: 65535	0						
bonjour-profile	Bonjour profile name.	string	Maximum length: 35							
coordinate-latitude	WTP latitude coordinate.	string	Maximum length: 19							
coordinate-longitude	WTP longitude coordinate.	string	Maximum length: 19							
firmware-provision	Firmware version to provision to this FortiAP on bootup (major.minor.build, i.e. 6.2.1234).	string	Maximum length: 35							
firmware-provision-latest	Enable/disable one-time automatic provisioning of the latest firmware version.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not automatically provision the latest available firmware.</td></tr><tr><td>once</td><td>Automatically attempt a one-time upgrade to the latest available firmware version.</td></tr></table>				Option	Description	disable	Do not automatically provision the latest available firmware.	once	Automatically attempt a one-time upgrade to the latest available firmware version.
Option	Description									
disable	Do not automatically provision the latest available firmware.									
once	Automatically attempt a one-time upgrade to the latest available firmware version.									
image-download	Enable/disable WTP image download.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WTP image download at join time.</td></tr><tr><td>disable</td><td>Disable WTP image download at join time.</td></tr></table>				Option	Description	enable	Enable WTP image download at join time.	disable	Disable WTP image download at join time.
Option	Description									
enable	Enable WTP image download at join time.									
disable	Disable WTP image download at join time.									
index	Index.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ip-fragment-preventing	Method.	option	-	tcp-mss-adjust						

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tcp-mss-adjust</i></td><td>TCP maximum segment size adjustment.</td></tr><tr><td><i>icmp-unreachable</i></td><td>Drop packet and send ICMP Destination Unreachable</td></tr></table>	Option	Description	<i>tcp-mss-adjust</i>	TCP maximum segment size adjustment.	<i>icmp-unreachable</i>	Drop packet and send ICMP Destination Unreachable					
	Option	Description										
	<i>tcp-mss-adjust</i>	TCP maximum segment size adjustment.										
<i>icmp-unreachable</i>	Drop packet and send ICMP Destination Unreachable											
led-state	Enable to allow the FortiAPs LEDs to light. Disable to keep the LEDs off. You may want to keep the LEDs off so they are not distracting in low light areas etc.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow the LEDs on this FortiAP to light.</td></tr><tr><td><i>disable</i></td><td>Keep the LEDs on this FortiAP off.</td></tr></table>	Option	Description	<i>enable</i>	Allow the LEDs on this FortiAP to light.	<i>disable</i>	Keep the LEDs on this FortiAP off.					
	Option	Description										
	<i>enable</i>	Allow the LEDs on this FortiAP to light.										
<i>disable</i>	Keep the LEDs on this FortiAP off.											
location	Field for describing the physical location of the WTP, AP or FortiAP.	string	Maximum length: 35									
login-passwd	Set the managed WTP, FortiAP, or AP's administrator password.	password	Not Specified									
login-passwd-change	Change or reset the administrator password of a managed WTP, FortiAP or AP.	option	-	no								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>yes</i></td><td>Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.</td></tr><tr><td><i>default</i></td><td>Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.</td></tr><tr><td><i>no</i></td><td>Do not change the managed WTP, FortiAP or AP's administrator password.</td></tr></table>	Option	Description	<i>yes</i>	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.	<i>default</i>	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.	<i>no</i>	Do not change the managed WTP, FortiAP or AP's administrator password.			
	Option	Description										
	<i>yes</i>	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.										
	<i>default</i>	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.										
<i>no</i>	Do not change the managed WTP, FortiAP or AP's administrator password.											
mesh-bridge-enable	Enable/disable mesh Ethernet bridge when WTP is configured as a mesh branch/leaf AP.	option	-	default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>Use mesh Ethernet bridge local setting on the WTP.</td></tr><tr><td><i>enable</i></td><td>Turn on mesh Ethernet bridge on the WTP.</td></tr><tr><td><i>disable</i></td><td>Turn off mesh Ethernet bridge on the WTP.</td></tr></table>	Option	Description	<i>default</i>	Use mesh Ethernet bridge local setting on the WTP.	<i>enable</i>	Turn on mesh Ethernet bridge on the WTP.	<i>disable</i>	Turn off mesh Ethernet bridge on the WTP.			
	Option	Description										
	<i>default</i>	Use mesh Ethernet bridge local setting on the WTP.										
	<i>enable</i>	Turn on mesh Ethernet bridge on the WTP.										
<i>disable</i>	Turn off mesh Ethernet bridge on the WTP.											
name	WTP, AP or FortiAP configuration name.	string	Maximum length: 35									
override-allowaccess	Enable to override the WTP profile management access configuration.	option	-	disable								

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile management access configuration.		
	<i>disable</i>	Use the WTP profile management access configuration.		
override-ip-fragment	Enable/disable overriding the WTP profile IP fragment prevention setting.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile IP fragment prevention setting.		
	<i>disable</i>	Use the WTP profile IP fragment prevention setting.		
override-lan	Enable to override the WTP profile LAN port setting.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile LAN port setting.		
	<i>disable</i>	Use the WTP profile LAN port setting.		
override-led-state	Enable to override the profile LED state setting for this FortiAP. You must enable this option to use the led-state command to turn off the FortiAP's LEDs.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile LED state.		
	<i>disable</i>	Use the WTP profile LED state.		
override-login-passwd-change	Enable to override the WTP profile login-password (administrator password) setting.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile login-password (administrator password) setting.		
	<i>disable</i>	Use the the WTP profile login-password (administrator password) setting.		
override-split-tunnel	Enable/disable overriding the WTP profile split tunneling setting.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile split tunneling setting.		
	<i>disable</i>	Use the WTP profile split tunneling setting.		

Parameter	Description	Type	Size	Default
override-wan-port-mode	Enable/disable overriding the wan-port-mode in the WTP profile.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override the WTP profile wan-port-mode.		
	<i>disable</i>	Use the wan-port-mode in the WTP profile.		
region	Region name WTP is associated with.	string	Maximum length: 35	
region-x	Relative horizontal region coordinate (between 0 and 1).	string	Maximum length: 15	0
region-y	Relative vertical region coordinate (between 0 and 1).	string	Maximum length: 15	0
split-tunneling-acl-local-ap-subnet	Enable/disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.		
	<i>disable</i>	Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.		
split-tunneling-acl-path	Split tunneling ACL path is local/tunnel.	option	-	local
	<b>Option</b>	<b>Description</b>		
	<i>tunnel</i>	Split tunneling ACL list traffic will be tunnel.		
	<i>local</i>	Split tunneling ACL list traffic will be local NATed.		
tun-mtu-downlink	The MTU of downlink CAPWAP tunnel.	integer	Minimum value: 576 Maximum value: 1500	0
tun-mtu-uplink	The maximum transmission unit.	integer	Minimum value: 576 Maximum value: 1500	0
uuid	Universally Unique Identifier (UUID; automatically assigned but can be manually reset).	uuid	Not Specified	00000000-0000-0000-0000-000000000000

Parameter	Description	Type	Size	Default
wan-port-mode	Enable/disable using the FortiAP WAN port as a LAN port.	option	-	wan-only
	Option	Description		
	wan-lan	Use the FortiAP WAN port as a LAN port.		
	wan-only	Do not use the WAN port as a LAN port.		
wtp-id	WTP ID.	string	Maximum length: 35	
wtp-profile	WTP profile name to apply to this WTP, AP or FortiAP.	string	Maximum length: 35	

## config lan

Parameter	Description	Type	Size	Default
port-mode	LAN port mode.	option	-	offline
	<b>Option</b>	<b>Description</b>		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.		
	<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.		
port-ssid	Bridge LAN port to SSID.	string	Maximum length: 15	
port1-mode	LAN port 1 mode.	option	-	offline
	<b>Option</b>	<b>Description</b>		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.		
	<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.		
port1-ssid	Bridge LAN port 1 to SSID.	string	Maximum length: 15	
port2-mode	LAN port 2 mode.	option	-	offline

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.

	Option	Description																		
	enable	Enable automatic transmit power adjustment.																		
disable	Disable automatic transmit power adjustment.																			
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17																
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10																
auto-power-target	Target of automatic transmit power adjustment in dBm.	string	Maximum length: 7	-70																

Parameter	Description	Type	Size	Default
power-mode	Set radio effective isotropic radiated power. This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage
	<b>Option</b>	<b>Description</b>		
	<i>dBm</i>	Set radio EIRP power in dBm.		
	<i>percentage</i>	Set radio EIRP power by percentage.		
power-level	Radio EIRP power level as a percentage of the maximum EIRP power.	integer	Minimum value: 0 Maximum value: 100	100
power-value	Radio EIRP power in dBm.	integer	Minimum value: 1 Maximum value: 33	27
override-vaps	Enable to override WTP profile Virtual Access Point (VAP) settings.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override WTP profile VAP settings.		
	<i>disable</i>	Use WTP profile VAP settings.		
vap-all	Configure method for assigning SSIDs to this FortiAP.	option	-	tunnel
	<b>Option</b>	<b>Description</b>		
	<i>tunnel</i>	Automatically select tunnel SSIDs.		
	<i>bridge</i>	Automatically select local-bridging SSIDs.		
	<i>manual</i>	Manually select SSIDs.		
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35	
override-channel	Enable to override WTP profile channel settings.	option	-	disable

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override WTP profile channel settings.		
	<i>disable</i>	Use WTP profile channel settings.		
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3	
drma-manual- mode	Radio mode to be used for DRMA manual mode.	option	-	ncf
	<b>Option</b>	<b>Description</b>		
	<i>ap</i>	Set the radio to AP mode.		
	<i>monitor</i>	Set the radio to monitor mode		
	<i>ncf</i>	Select and set the radio mode based on NCF score.		
	<i>ncf-peek</i>	Select the radio mode based on NCF score, but do not apply.

override-txpower	Enable to override the WTP profile power level configuration.	option	-	disable																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Override the WTP profile power level configuration.</td></tr><tr><td>disable</td><td>Use the WTP profile power level configuration.</td></tr></table>	Option	Description	enable	Override the WTP profile power level configuration.	disable	Use the WTP profile power level configuration.																																	
	Option	Description																																						
	enable	Override the WTP profile power level configuration.																																						
disable	Use the WTP profile power level configuration.																																							
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference.	option	-	disable																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable automatic transmit power adjustment.</td></tr><tr><td>disable</td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	enable	Enable automatic transmit power adjustment.	disable	Disable automatic transmit power adjustment.																																	
	Option	Description																																						
	enable	Enable automatic transmit power adjustment.																																						
disable	Disable automatic transmit power adjustment.																																							

Parameter	Description	Type	Size	Default						
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17						
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10						
auto-power-target	Target of automatic transmit power adjustment in dBm.	string	Maximum length: 7	-70						
power-mode	Set radio effective isotropic radiated power. This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>				Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.
	Option	Description								
	<i>dBm</i>	Set radio EIRP power in dBm.								
<i>percentage</i>	Set radio EIRP power by percentage.									
power-level	Radio EIRP power level as a percentage of the maximum EIRP power.	integer	Minimum value: 0 Maximum value: 100	100						
power-value	Radio EIRP power in dBm.	integer	Minimum value: 1 Maximum value: 33	27						
override-vaps	Enable to override WTP profile Virtual Access Point (VAP) settings.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Override WTP profile VAP settings.</td></tr><tr><td><i>disable</i></td><td>Use WTP profile VAP settings.</td></tr></table>				Option	Description	<i>enable</i>	Override WTP profile VAP settings.	<i>disable</i>	Use WTP profile VAP settings.
	Option	Description								
	<i>enable</i>	Override WTP profile VAP settings.								
<i>disable</i>	Use WTP profile VAP settings.									
vap-all	Configure method for assigning SSIDs to this FortiAP.	option	-	tunnel						

Parameter	Description	Type	Size	Default
	<b>Option</b>	<b>Description</b>		
	<i>tunnel</i>	Automatically select tunnel SSIDs.		
	<i>bridge</i>	Automatically select local-bridging SSIDs.		
	<i>manual</i>	Manually select SSIDs.		
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35	
override-channel	Enable to override WTP profile channel settings.	option	-	disable
	<b>Option</b>	<b>Description</b>		
	<i>enable</i>	Override WTP profile channel settings.		
	<i>disable</i>	Use WTP profile channel settings.		
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3	
drma-manual-mode	Radio mode to be used for DRMA manual mode.	option	-	ncf
	<b>Option</b>	<b>Description</b>		
	<i>ap</i>	Set the radio to AP mode.		
	<i>monitor</i>	Set the radio to monitor mode		
	<i>ncf</i>	Select and set the radio mode based on NCF score.		
	<i>ncf-peek</i>	Select the radio mode based on NCF score, but do not apply.		

#### config radio-4

Parameter	Description	Type	Size	Default						
override-band	Enable to override the WTP profile band setting.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Override the WTP profile band setting.</td></tr><tr><td><i>disable</i></td><td>Use the WTP profile band setting.</td></tr></table>				Option	Description	<i>enable</i>	Override the WTP profile band setting.	<i>disable</i>	Use the WTP profile band setting.
	Option	Description								
	<i>enable</i>	Override the WTP profile band setting.								
	<i>disable</i>	Use the WTP profile band setting.								
band	WiFi band that Radio 4 operates on.	option	-
